2017 STUDENT ORIENTATION STAFF

Elizabeth Priore ’19
Elizabeth is a double major in business and linguistics hailing from the very snowy suburbs of Buffalo. She loves all things languages and is also completing a Spanish minor. When she isn’t working in Rush Rhees, Elizabeth enjoys singing with her a cappella group, Vocal Point, and hanging out with her sisters in Alpha Phi. Elizabeth fell in love with Rochester the second she got here, and she hopes to create a similar experience for the incoming class of 2021!

Tiffany Nicholas ’19
Hailing from the warm and faraway land of Pittsford, New York, (which is actually 10.7 miles away according to Google Maps), Tiffany is a rising junior majoring in biomedical engineering with a potential minor in music. She can often be found working on problem sets in the library, playing guitar for No Jackets Required, or volunteering with her brothers in Alpha Phi Omega. An expert at walking backwards from her job as a tour guide, Tiffany also loves being a teaching assistant for the biomedical engineering department and a tutor for the LEAP program, which works with local elementary school kids. She enjoys baking cupcakes, binge-watching Parks and Rec, and listening to the Hamilton soundtrack nonstop. Tiffany is so excited to be a part of the orientation team this summer, and she can’t wait to help welcome the Class of 2021 to the Yellowjacket family!

Adrian Harwood ’19
Adrian was born in Windsor, Canada, and moved to Maastricht, The Netherlands, during his late childhood years, where he developed a passion for multicultural understanding. His experiences abroad forged the path for him to major in international relations and minor in both history and psychology at the University of Rochester. During his free time, Adrian loves to strum on his guitar and read about modern world history; he is also a teaching assistant for lower-level psychology courses. Adrian aspires to make a meaningful impact on the manner in which we approach understanding cultural differences and the growing significance of embracing multiculturalism in our ever increasingly globalized world. And where does this begin?—with the class of 2021!

Thomas Hogrefe ’19
A junior political science major from Corning, New York, Tom has found a new home in the city of Rochester. Apart from his studies, Tom is also a member of the club UR Roundnet and a brother of Sigma Phi Epsilon fraternity. In his spare time, he also works as an EMT both on and off campus and furthers his passion for aviation as a glider pilot. The U of R was his number-one choice, and his love hasn’t wavered since then—he can’t wait to welcome the newest addition to the Rochester family!

Tayfun Sahin ’20
Tayfun Sahin is California born but now lives in Highland Park, Illinois, and is majoring in chemical engineering. He’s a part of the Debate team, Pride Network, and student government as a senator. In his free time, you might find him playing flute, watching anime, reading fantasy books, or even taking a jog along the Genesee. He is very excited to welcome the incoming Class of 2021 and show everything the University has to offer!

WELCOME TO THE COLLEGE

The College at the University of Rochester is unlike any other college in the world. Here we believe that your education belongs to you, and that your interests, passions, curiosity, and goals—above all else—should drive your learning. We know as a research faculty that you will do your best work and have the most fun in your studies if you learn what you love and love what you learn.

Experience teaches us that people do not learn in isolation. We learn from others and with others. At Rochester, people learn together by living and working together. Studying with those who share your interests and curiosity helps keep your learning alive. Being challenged by others who ask unexpected questions opens up new interests and passions. The possibilities for learning here are unbounded. The campus offers nearly unlimited opportunities for you—both in and out of class—to sharpen your skills and develop new interests.

Welcome to college. Everything in this First-Year Student Academic Handbook is designed to help make your education your own. Have the time of your life!

The Rochester Curriculum

Three features central to faculty learning are the hallmarks of the Rochester Curriculum: curiosity, competence, and community. With abundant and committed guidance, students plan for broad and free experimentation with ideas and subjects, discover or sharpen their interests, and come to understand their intellectual strengths and weaknesses. Students learn through sustained and integrated study in varied fields about a range of subjects and acquire the complex problem-solving and analytical skills needed for a lifetime of learning. Students pursue at least one major in one of the three great divisions of learning (humanities, social sciences, natural sciences and engineering) and complete at least a cluster in each of the other two areas. The choice of subject matter and the level of concentration (major, minor, cluster) in each division is the student’s, but through that choice, students take part in three different intellectual communities and in three different sustained conversations about learning and ideas.

These three different intellectual communities are the academic divisions of the College. Scholars in each division tend to know different things and to know them in different ways.

The natural sciences and engineering are concerned with natural phenomena ranging from the nature of numbers and logic to those of the cosmos and our Earth, through those of creature, organ, cell, and gene, and on to those of the fundamental phenomena of energy and existence.

The social sciences focus on natural phenomena that involve social interactions, human behavior, and the ways in which individuals create and maintain social groups and shape societies. Social scientists conduct research that is both quantitative and qualitative.

The humanities investigate humanity’s meaningful past and present through analysis of our symbolic and creative expressions. They explore how individuals and groups define and understand themselves and others with the ultimate goal of learning what it means to be human.

Students need to complete a major in one of these three divisions, and unless they choose an additional major or a minor, an authorized “divisional cluster” in each of the other two areas outside the area of the major. The following list of undergraduate degree programs (majors) offered by the College is divided into these three academic divisions:

**NATURAL SCIENCES AND ENGINEERING**
- Applied Mathematics
- Audio and Music Engineering*
- Biological Sciences
  - Biochemistry
  - Cell and Developmental Biology
  - Computational Biology
  - Ecology and Evolutionary Biology
  - Microbiology
  - Molecular Genetics
  - Neuroscience
- Biology
- Biomedical Engineering*
- Brain and Cognitive Sciences
- Chemical Engineering*
- Chemistry
- Computer Science
- Data Science
- Earth and Environmental Sciences
  - Environmental Science
  - Environmental Studies
  - Geological Sciences
- Electrical and Computer Engineering*
- Engineering Science
- Engineering and Applied Sciences
- Environmental Health
- Geological Sciences
- Geomechanics
- Mathematics
- Mathematics-Statistics
- Mechanical Engineering*
- Optical Engineering*
- Optics*
- Physics
- Physics and Astronomy
- Statistics

**SOCIAL SCIENCES**
- Anthropology
- Business
- Economics
- Epidemiology
- Financial Economics
- Health, Behavior and Society
- Health Policy
- History
- International Relations
- Linguistics
- Political Science
- Psychology

**HUMANITIES**
- American Sign Language
- Art and Art History
  - Art History
  - Studio Arts
- Bioethics
- English
- Film and Media Studies
- Modern Languages and Cultures
  - Comparative Literature
  - French
  - German
  - Japanese
  - Russian
  - Spanish
- Music
- Philosophy
- Religion and Classics
  - Classics
  - Religion

**INTERDISCIPLINARY MAJORS**
- African and African-American Studies
- American Studies
- Archaeology, Technology and Historical Structures
- East Asian Studies
- Digital Media Studies
- Interdepartmental Studies
- Russian Studies
- Women’s Studies

*Students in these programs may complete somewhat modified clusters.

NOTE: A LIST OF APPROVED MINORS APPEARS ON PAGE 102.
Clusters are officially authorized sets of related courses comprising at least twelve credit hours (normally equivalent to three courses). Most students find that their interests coincide with some of the more than 250 clusters that appear in the Cluster Search Engine on the Web at www.rochester.edu/college/ccas/clusters. Students may request unique modifications of these authorized clusters through the sponsoring department and may even propose individualized interdepartmental clusters. Each of the clusters in the Search Engine includes a brief description and the requirements for completion. The database is searchable by course (e.g., BCS 110), by division or department (e.g., music), and by concept (e.g., cognition). You can learn more of what you need to know by clicking "Cluster Policies."

Primary Writing Requirement: In addition to completing a major, minor, or cluster in each of the three divisions, students are required to fulfill the Primary Writing Requirement. The Primary Writing Requirement is the College's first step in drawing students into our community of researchers and writers. Typically, the Primary Writing Requirement is satisfied by passing Reasoning and Writing in the College (WRT 105, WRT 105E, or the combined WRT 105A and WRT 105B) with a grade of "C" or better. To be prepared for the upper-level writing requirement in the majors, students should satisfy the Primary Writing Requirement by the end of the first year of study.

The Writing, Speaking, and Argument Program offers three versions of Reasoning and Writing in the College, WRT 105 (4 credits). The extended version of this same course, WRT 105E (4 credits), and the two-semester version, WRT 105A (2 credits) and WRT 105B (2 credits) have been developed for students needing more support and/or more time to meet the demands of college-level writing. All versions of WRT 105 grow out of a single course description, but individual sections have unique discipline-specific content and themes designed by each instructor with students' interests in mind. Students will find a wide range of topics from a variety of disciplines, such as "Truth, Justice, and the 'American' Way? Comic Books and the Rhetoric of Nationalism," "Being Homo Sapiens Sapiens: The Brain, The Mind, The Heart, and Full Catastrophe Living," and "Web-Wide World: The Ethics of Virtual Connection." Section themes are indicated through subtitles and descriptions, which, along with CRN numbers and section times, are available on the Writing, Speaking, and Argument Program's web page: http://writing.rochester.edu/.

The Writing, Speaking, and Argument Program encourages students to choose sections that interest them, whether this interest grows out of a desire to learn more about a favorite subject or to try something new.

International students are encouraged to register for U.S. Life: Customs and Practices (CAS 170) during the fall or spring semester of the first year. The class is limited in size to create an interactive and personalized experience. The innovative curriculum is designed to assist students in their transition to college through the study of American culture and values and successful study practices. Readings and short assignments are supplemented by on- and off-campus field trips, guest speakers, group activities, and discussion of current issues. The course carries two credits and may be combined with four additional full-credit courses.

Learning across the Divisions
A great deal of the College’s innovative teaching and research takes place outside the confines of traditional departments, divisions, or even schools. As the list of interdisciplinary majors on page 4 shows, students can study new fields that have developed at the crossroads of existing disciplines (see also the list of approved minors on page 100). Cutting-edge work in public health–area studies, digital media studies, business, and other domains requires students to have in-depth knowledge in a blend of science, humanities, and social sciences fields. Sometimes students will take courses from multiple departments in the construction of their major; other times, the work they do in individual courses will represent a variety of disciplines.

Many of the college’s newest majors are interdisciplinary. In the business major, for example, students take courses in economics, marketing, statistics, and accounting. In digital media studies, they pursue work in computer science, art, optics, and film and media studies. Majors in American studies take courses in the humanities and social sciences in departments such as art history, English, history, and political science. East Asian studies majors work in language, anthropology, literature, and history, whereas audio music engineering requires students to study electrical and computer engineering, math and physics, music theory, and computer science.

In addition, many individual courses take advantage of an interdisciplinary format. In some, students learn how to program computers while studying media history and theory; in others, they study musicianship and the art and science of sound recording.

Academic Honesty
As first-year students, you are joining a university community committed to the pursuit of excellence in learning, teaching, creativity, and research. Academic honesty is the cornerstone of that academic excellence, as it creates the necessary conditions of mutual trust and open communication that make intellectual inquiry and growth possible. The AS&E Academic Honesty Policy recognizes our shared obligation to promote academic honesty, establishes high standards of academic conduct, and requires each student to meet those standards.

Academic honesty means acting with truthfulness and sincerity in carrying out all aspects of our individual and collaborative work, maintaining ownership over our work, and acknowledging our debt to the work of others. Students should complete their work through their own honest efforts and expect and encourage honesty among their peers. Students can learn more about the academic honesty policy and test their self-knowledge with quizzes on the academic honesty website, www.rochester.edu/college/honesty/index.html.
CHOOSING YOUR COURSES

The Rochester Curriculum is uniquely designed to allow you to own your education. We do not tell you which subjects to study—that choice is fully yours. Here you may safely explore courses of interest and not worry about having enough time to complete your academic program. This is true whether you select a major with 10 required courses or 20. To see how true this is, consider what might be possible if you decide on one of the most time-consuming programs, a BS major in the biological sciences: you’ll complete “Reasoning and Writing in the College” and, as required by the major, a maximum of 11 biology courses, two semesters of calculus, four semesters of chemistry, two semesters of physics, and one course in a field related to biology, for a total of 21 courses. This leaves 11 courses for exploration, some of which will lead to fulfilling clusters. Many of you will choose majors with fewer requirements, leaving plenty of time for a cluster of particular interest to grow into a minor or second major.

Beginning on page 12 of this handbook, you’ll find advice from each department that will help you select courses that match your interests and skill levels. Your choices will depend on several factors, including your initial ideas about possible majors, your comfort with exploring unknown subjects (give it a try!), departmental placement recommendations, and course availability (although this is not typically a problem). Here are some opportunities to consider as you read through this handbook and jot down courses you might take:

**Small, interactive courses**, which allow you to work closely with faculty and meet other students with similar interests. We strongly recommend taking at least one small course your first semester. WRT 105, CAS 142, one of the Meliora seminars offered specifically for first-year students, and language courses are examples of small courses, though there are many others as well.

**Interesting courses** outside potential major(s), which offer a gateway to new interests. Read through the course descriptions in this handbook and choose three that you find especially interesting. We challenge you to take at least one your first semester. (You have plenty of time!)

**Courses for potential major(s)**, which allow you to delve into your area(s) of interest. Be sure to read “Departmental Advice for First-Year Students” included in this handbook to identify the courses you will need to take during your first year, along with those that might be postponed.

Courses that coincide with your academic strengths, which provide a boost of confidence while allowing you to delve deeper into an area of study.

Most importantly, your choices should grow out of your interests, your curiosity, and your goals.

When selecting your courses, keep in mind that some are offered only once each academic year. While MTH 141 and 161 are offered each semester, courses such as CHM 131 and most introductory (101) language courses are offered only in the fall semester.

**Academic Advising during Your First Year:** During the summer prior to your arrival on campus, you will be assigned to an undergraduate advisor. Undergraduate advisors are faculty and staff who assist students in developing a preliminary academic plan, encourage exploration of the Rochester Curriculum, introduce students to academic opportunities, and help students build relationships with other campus offices and programs.

Undergraduate advisors help you navigate your college lives; they serve as guides as you begin your college journey; and they assist you in making good academic decisions. Undergraduate advisors recognize that many students arrive at college somewhat uncertain about their academic futures. They also understand that many other students arrive at college feeling very certain about their plans for their first year. Both of these scenarios are typical, and both are completely OK!

You can expect to meet with your undergraduate advisor several times during Orientation and once classes are under way, it is likely that you will meet several times each semester during your first year. Your undergraduate advisor is the person to speak with when you have questions about choosing classes and clusters, getting involved on campus, interacting with your professors and teaching assistants, and academic support services such as tutoring. As your guide to college life at Rochester, your undergraduate advisor will refer you to a faculty member in a program or department for detailed information about your prospective major. If you have a specific question about an academic policy (e.g., whether you might be able to take an additional course in an upcoming semester), your undergraduate advisor will recommend that you meet with a professional advisor in the College Center for Advising Services. Many other advising resources exist as well, including peer advisors, advisors in the Gwen M. Greene Career and Internship Center, and study skills consultants, to name just a few examples.
Courses I am interested in:

Advanced Placement and International Baccalaureate Exams: AP and IB award criteria, as you may have noticed, appear with the departmental information. Students are notified of credit by the College Center for Advising Services. Those wishing to discuss either AP or IB credit should contact that office. If you have taken any AP or IB courses, please list the subject and grade that you received on each exam (if known). Then, look up and record the placement information below.

(Note: The records of students with AP credit that is contingent upon the completion of a Rochester course are reviewed each summer so that credit may be awarded appropriately.)

Academic Advising during Your Second Year (and Beyond):

Upon official declaration of a major, usually at the end of the sophomore year, you will be assigned a **major advisor**. Students intending to major in engineering can expect to stay with the same advisor assigned to them in their first year. Major advisors (typically faculty members) provide critical guidance in helping students understand course content and classroom expectations, identify opportunities for research and career development, and gain a deeper appreciation of their chosen academic discipline.

To make the most of your intellectual journey at Rochester, we encourage you to continue to build relationships with peers, staff, and faculty throughout your undergraduate years. For some students, the undergraduate advisor will continue to be an important source of information and support until graduation. Other students will find that the relationships they develop with faculty and staff later in their college career will be more frequently accessed sources of information. In both cases, it is important to recognize that Rochester has a variety of resources to support your academic journey; by seeking out conversations with others, you will enrich your own experience and develop a supportive and influential community of advisors.

**Connecting Courses and Careers:** As you decide which courses to take, consider the connections these courses have to your interests and professional goals. Whether you are exploring career options or have one in mind or need to fulfill prerequisite courses, your academics will play a key role in the development of the knowledge and skills needed for your future. See page 97 for more information on connecting coursework and careers and how the Gwen M. Greene Career and Internship Center can assist you in your exploration.
College-level transfer credit: For the sake of coherence and uniformity of instruction, the College prefers that its entering first-year students take all their courses, basic and advanced, from its own faculty as much as possible. With the exception of CEEB Advanced Placement and International Baccalaureate work, the College does not recognize nor grant college credit for secondary school coursework or for courses taught in a secondary school by the secondary school's own faculty for college credit. Credit may be granted to entering students for prior coursework taught on the campus of an accredited college or university and completed with a grade of “C” or higher. Upon receipt of the official transcript, the coursework will be evaluated to determine if it is equivalent in level and/or content to coursework at the University of Rochester. Please note that transfer credit for a writing course does not, in itself, satisfy the primary writing requirement; see Course Placement Methods, Primary Writing Requirement and Placement, page 9. Note as well that students may apply transfer credit toward their graduation requirements. However, the College’s enrollment policy does not permit students to accelerate their graduation by more than one semester.

Students should have an official transcript sent to the College Center for Advising Services, 312 Lattimore Hall, University of Rochester, P.O. Box 270402, Rochester, NY 14627-0402. Please indicate below any anticipated college-level transfer credit.

Course Placement Methods

Biology
Students interested in biology who do not have AP credits should enroll in the BIO 110 Principles of Biology I (fall and spring) and BIO 111 Principles of Biology II (spring) introductory course sequence.

Students with AP biology credit who received a 4 or 5 on their AP exam or an IB score of 7 may register for BIO 112 Perspectives in Biology I (fall) and BIO 113 Perspectives in Biology II (spring).

Students wishing to discuss their choices should attend the “Q & A” sessions and/or go to the biology table at the Academic Open House during Orientation or contact the instructor directly.

For more information on the similarities and differences between the BIO 110/111 and the BIO 112/113 intro biology course series, go to www.rochester.edu/college/BIO/UPBM/FreshmanAdvising.pdf.

To look up biology course instructor information, visit www.rochester.edu/College/BIO/UPBM/upbmcourses.htm.

Chemistry
Students interested in chemistry who do not have AP credit should select CHM 131. Students who have received a 4 or 5 on the AP exam are entitled to credit for CHM 131 and have several options available. Students may take the chemistry course in organic chemistry, CHM 171/173, or they may accept the credit and not take chemistry in the fall semester, with subsequent enrollment in CHM 132 in the spring semester, or they may waive the credit and enroll in CHM 131.

The department expects that some students will select each of these options, depending on their preparation in chemistry and their future interests.

Credit for courses taken at the University of Rochester:
Students who have taken credit-bearing courses here while in high school, through the Taste of College program or otherwise, should be aware of the following. Grades for these courses will be factored into the cumulative grade point average, and credit will count toward undergraduate degree requirements. Students have the option of requesting that these courses be treated as if they were transfer courses, in which case the grade will be removed from the average, and credit will be counted toward degree requirements as long as the grade was a “C” or better. Petitions should be submitted to the College Center for Advising Services.

College Enrollment Policy: To ensure that they receive the full benefit of the residential college experience, Rochester students who enroll as first-year students are expected to maintain full-time enrollment during the fall or spring semesters for no less than seven semesters. Semesters spent on University of Rochester study abroad academic year programs are considered the equivalent of full-time semesters in residence. Students with questions about early graduation should discuss their plans with an advisor in the College Center for Advising Services.

Primary Writing Requirement and Placement
All students at the University of Rochester, whether incoming first-year students or transfers, must satisfy the Primary Writing Requirement. The majority of students fulfill the requirement by earning a “C” or better in WRT 105, Reasoning and Writing in the College, or WRT 105E or WRT 105A and B, versions of 105 chosen by students who need more support to meet the demands of college-level writing. Students who believe that they are already proficient college writers may petition to substitute a University of Rochester writing-intensive course for WRT 105. The substitute course may not also be used to fulfill the Upper-Level Writing Requirement. Transfer students who have completed a WRT 105 equivalent at another institution and received a “B” or
better may petition to use this course to satisfy the Primary Writing Requirement. For more information on satisfying the Primary Writing Requirement, including instructions on how to access the Writing Placement Survey, please refer to http://writing.rochester.edu/undergraduate/index.html.

Students admitted to the College through the English for Academic Purposes Program fulfill the requirement by earning a grade of "C" or higher in WRT 103, EAPP Critical Reading, Reasoning, and Writing, and WRT 104, EAPP Research, Reading, and Writing. For more information on EAPP placement and courses, please refer to http://writing.rochester.edu/eapp/index.html.

Foreign Languages
Modern language students with no previous exposure to a language should begin with the 101 course. Students with previous exposure to a language should check the language placement page provided through online orientation forms for instructions about taking a placement exam. For languages for which there is no online exam available, students should contact an advisor in the Department of Modern Languages and Cultures (Italian, Japanese, Korean, or Portuguese), the Skalny Center (Polish), or the Department of Religion and Classics (Arabic, Greek, Hebrew, or Latin) for placement at the appropriate level. Students are not permitted to register for or receive credit for a particular language course if they have already achieved proficiency at the level of that course. For courses 101–200, students are not permitted to register for a lower-numbered course after successfully completing a higher-numbered course. Students do not place themselves.

Mathematics
One of the primary factors conducive to success in mathematics is placement in the appropriate course. The Department of Mathematics uses a combination of SAT and ACT scores, AP calculus exam scores, and high school records to place students. Advanced Placement credit rules take precedence over SATs and ACTs. See the mathematics section of this handbook for more details on AP scores and placement.

For students placed in either MTH 140 or MTH 141 who wish to enroll in a higher course, there will be a placement test offered at the beginning of the semester. See the placement web page www.sas.rochester.edu/mth/undergraduate/handbook/placement.html for more information regarding placement guidelines. In case of discrepancy or questions, students are encouraged to speak with a representative of the mathematics department at the academic open house during Orientation.

Music
Students interested in registering for a music theory course should take the Theory Placement Exam given during Orientation. Results will guide the music faculty in determining appropriate placement into MUR 110 or MUR 111. Students who have taken theory courses previously, including AP courses, should make this known at the time of the placement exam.

Psychology
A score of 4 or 5 on the AP psychology test will result in 4.0 semester hours of credit and waiver of the requirement for Introduction to Psychology. To earn transfer credit, an introductory course must be taught at a college by regular college faculty. Courses taught in the high school will not be granted transfer credit.

Putting It All Together
Review what you’ve done so far and make a list here of the courses you want to consider this fall. Then, using the online Fall 2016 Course Schedule available at https://cdcs.ur.rochester.edu/ together with the Course Planning Form, begin building a few possible schedules that appeal to you, both in content and in structure. We recommend that you use a pencil, so you can easily change your mind and your schedule. Then, when you are ready, complete the online Course Planning Form and submit it with your other Orientation forms. (Remember, there will be many opportunities to discuss, clarify, and change courses at Orientation, but if you want help sooner, give us a call.) Most students register for four full-credit courses during their first semester, typically totaling 16–19 credits. In addition, first-semester students may choose to register for up to three additional credits of coursework.

Fall 2016
Preferred courses:

1. 
2. 
3. 

Other courses that interest you:

1. 
2. 
3. 
4. 
5. 
6. 

If you have any questions at all, please feel free to contact the College Center for Advising Services at (585) 275-2354, Monday through Friday, 9 a.m. to 5 p.m. or email us at cccas@rochester.edu. An advisor will be happy to answer any questions you may have. Please refer to our website at www.rochester.edu/college/ccas.
WHAT WILL YOU HAVE TIME FOR?

Once in college, you may at first feel that you have an extraordinary amount of time on a day-to-day basis. In fact, you do have a great deal of unscheduled time. The challenge is filling that schedule in a balanced and productive way. Just what will you have time for?

A. Class time: Please consider the amount of time that your coursework will require.

You will be in class an average of 12–18 hours per week. For every one hour in class, expect to spend two to three hours reading, reviewing lecture notes, doing library or lab-based research, writing essays or lab reports, working on problems, etc. That equals a time commitment of 36–72 hours per week—more than a full-time job!

B. Co- and extracurricular activities: Involvement in activities such as the arts, athletics, clubs, and cultural activities is an important part of a college experience. Look at the list of more than 230 clubs and organizations available online at the Campus Community Connection, ccc.rochester.edu, and list some activities that interest you. You should also plan to attend the Student Activities Fair offered during the first week of classes.

C. Additional time commitments: How many hours a week do you think you will spend in the following areas during your first semester?

<table>
<thead>
<tr>
<th>Activity</th>
<th>Hours per Week</th>
</tr>
</thead>
<tbody>
<tr>
<td>paid employment</td>
<td></td>
</tr>
<tr>
<td>volunteering</td>
<td></td>
</tr>
<tr>
<td>socializing</td>
<td></td>
</tr>
<tr>
<td>commuting</td>
<td></td>
</tr>
<tr>
<td>family obligations</td>
<td></td>
</tr>
<tr>
<td>sleeping</td>
<td></td>
</tr>
<tr>
<td>eating</td>
<td></td>
</tr>
<tr>
<td>other</td>
<td></td>
</tr>
</tbody>
</table>

There are 168 hours in a week. How many have you accounted for?

A. Study and class
B. Co- and extracurricular
C. Additional

Total Time Commitments

(If you think you might be overwhelmed, we are here to help you. Assistance is available from your premajor advisor and, among other campus resources, the people in the College Center for Advising Services and the Center for Excellence in Teaching and Learning.)

Your Orientation Materials

Now you’re ready to complete and submit your orientation materials. All forms and information are available online at learn.rochester.edu. If you are having difficulties accessing the forms online, please contact the Orientation office at (585) 275-4414 or email orientation@rochester.edu.

Have Any Questions?

All of us who work with the orientation program are glad that you chose the University of Rochester. We look forward to working with you. Please use this space to write down questions you would like answered during orientation.
MELIORA SEMINARS

Attending college gives students the opportunity to take courses that address important issues and explore new disciplines that are not typically covered in high school. At Rochester, Meliora Seminars are small, selective courses for first-year students that allow study of fascinating questions about being human in a complex world: What is the nature of democracy? How do we communicate with one another? What is love? What is justice? How have artists and filmmakers addressed the problem of climate change? The goal is to create a collaborative and rich intellectual experience for students beginning their academic careers Rochester. The seminars are designed for first-year students and do not presume prior experience in the field.

Each Meliora Seminar is unique, but common features include
- explicit attention to the relevance of course material to contemporary social issues
- community engagement through on- or off-campus dialogue with individuals or groups working on issues addressed in the seminars
- reading and discussion in small classes of 12–15 students

Meliora Seminars count as regular, graded 4-credit courses and can be used in clusters, minors, and majors. In collaboration with the College’s Writing, Speaking and Argument program, the seminars are also preapproved as acceptable alternatives for students who petition out of the WRT 105 requirement.

Course Descriptions

Fall 2017

Democracy: Past and Present. Instructor: Nick Gresens. What would “a government of the people, by the people, for the people” really look like? Is the right to vote sufficient to make a society democratic? Is majority rule any better than tyranny? Can people be trusted to rule themselves? In this course, we examine the first democracy—that of ancient Athens. We trace the historical development of democracy and explore the social factors and big ideas that shaped it into the form of government that almost every society in the world now looks to as a model. You learn about the various institutions that allowed Athenian society to function and discover what the Athenians thought about their great experiment, even if they thought it was a very bad idea. We also observe and discuss some of our own government institutions so that we can better understand our system of government, both in what it shares with ancient Athens and how it differs.

Ecolinguistics: Language and Movement. Instructors: Anne Wilcox, Solveiga Armoskaite. Movement and language are manifestations of the self, used deliberately or inadvertently. Both are powerful tools of self-expression and communication that connect us to the past and present. How does slang comment on the attitudes of the current generation? What does it mean to “know” a language? How does culture influence, free, or constrain our movement? Do we have patterns in our speech and in our movements? What do we forget when we lose a language? Answers to these questions are diagnostics for human wellbeing. “Ecolinguistics” is a term that captures the interrelatedness of wellbeing and communication. Through analytical and experiential study, LIN 101/DAN 108 looks at the impact of verbal and nonverbal expression and its role in sustainable living.

Spring 2018

Climate Futures. Instructor: Leila Nadir. Glacier ruins, extreme weather, rising sea levels, an ice age, and no polar bears. As artists, writers, filmmakers, and journalists work to make the often imperceptible transformations wrought by climate change visible to the public, they deploy imagery, narratives, frames, and aesthetic strategies. Through studies of literature, film, art, and pop culture, this course examines visions of a future shaped by climate change. Topics include philosophical approaches to the Anthropocene (a new geologic era proposed by scientists), strategies deployed by documentary and Hollywood filmmakers, and new works of “climate fiction.” A central concern of this course is the relationship between science and the humanities in understanding the environment. What are the roles of memory and imagination in the struggle to deal with the warming of Earth? Can the humanities save our planet? If climate change is unstoppable, how do we imagine what comes next?

The Outlaw Robin Hood: Resistance, Violence, and Social Change in Popular Culture. Instructor: Tom Hahn. Drawing on resources from numerous disciplines, in this course we examine questions about what drives or even justifies acting against or outside the law? In what ways does official culture bring the outlaw into being? Why and how do mainstream popular culture and commercial entertainment celebrate defiance of the law? We examine the central issue of whether the outlaw hero enlarges the possibility of social change and reform or whether such fantasies impede change and actually affirm the status quo. Secondary readings include contemporary political and social theory as well as historical and literary criticism that address specific assigned texts. We inevitably address these concerns from our own current perspective, exploring the cult of the outlaw over the last half millennium and in post-Trump America. A crucial feature of the course is opportunities for hands-on interaction with actual artifacts that recorded and enshrined Robin Hood’s celebrity from the 18th, 19th, and 20th centuries: chap books, ballad collections, boys’ and girls’ weeklies, sensational series, “serious” children’s literature, plays and pantomimes, musicals, and, more recently, young adult fantasy and literary fiction.

How to Apply

It is necessary to apply and submit a few sentences (maximum 200 words) describing your interest in the course in order to be selected. If selected, you are guaranteed registration for that course. Application is available online at https://learn.rochester.edu. Once you sign in with your NetID and password, follow the instructions in the Class of 2021 Organization located there. Applications are due by July 25, 2017; selected students will be notified no later than August 21, 2017.

Please email Sarab Van Munster (sarah.vanmunster@rochester.edu) with any questions.
AFRICAN AND AFRICAN-AMERICAN STUDIES

“Conscience is to the individual soul and to society what the law of gravitation is to the universe.”

—Frederick Douglass Rochester, New York (1850)

Information about the Program

The Frederick Douglass Institute for African and African-American Studies sponsors programs of teaching and research at the undergraduate level. As part of the College, the Institute has a broad mandate in undergraduate education, advanced research, and scholarly exchange within the University community and beyond; it is the University’s focal point for African and African-American Studies, a scholarly field that speaks uniquely to the issues of diversity, diaspora, citizenship, race, and identity that continue to be among the most important faced by our nation and our world.

The undergraduate concentration in African and African-American studies (AAS) provides an interdisciplinary program of studies that includes a variety of disciplinary approaches to the study of people of African descent in the Atlantic world, including the United States, the Caribbean, Latin America, Europe, and the African continent. Courses are cross-listed in anthropology, economics, English, history, modern languages and cultures, political science, religion and classics, art history, women’s studies, dance, and chemical engineering. Students follow a rigorous and closely monitored concentration designed to provide both broad exposure to and in-depth knowledge of the field.

The AAS concentration—which may be individually tailored to focus on either the humanities or the social sciences—appeals to students with primary interests in African and African-American studies as well as students working in more traditional, discipline-specific majors who find it an attractive, complementary option. Students majoring in engineering or the natural sciences may find a concentration in African and African-American studies an enriching opportunity as well.

Clusters

African-American Politics (S1AAS002)
This cluster is designed to deepen the knowledge of students concerning the African and African-American aspects of political science.

Aspects of History (S1AAS001)
This cluster is designed to help deepen the knowledge of students concerning African and African-American aspects of the discipline of history.

Economics and the African Diaspora (S1AAS003)
This cluster has been constructed to help deepen the knowledge of students concerning theoretical and empirical issues of development over time in economics, with special reference to African and African-American economic development.

Global and African Diasporic Studies (S1AAS005)
An exploration of topics and issues that are relevant to the knowledge of Africa and the African Diaspora (defined as peoples who can claim Africa as an important reference in their genealogy). This cluster emphasizes approaches that bridge existing gaps among different cultures, communities, and countries that make up the African Diaspora.

Race and Social Issues (S1AAS004)
This cluster looks at issues from a double racial and social approach, emphasizing the need to consider race and class status as fundamental reading parameters in exploring texts, films, and cultures.

Representation and Leadership (S1AAS006)
This cluster explores emblematic figures who inspire social and political movements in the United States, Africa, and the African Diaspora.

Visual and Literary Arts of the Diaspora (H1AAS001)
This cluster seeks to educate students about the significance of visual arts and literature in the lived experience of the African Diaspora.

Note: Unless otherwise noted, all clusters require at least 12 credits.

Courses

Definitive course listings are published before each semester. Courses listed here carry 4 credit hours unless otherwise noted. The following are some of the recent or planned offerings.

AAS 106 Colonial and Contemporary Africa.
This course takes a broad view of African history from the late 19th century to the present. Themes covered include the nature of European colonial domination, African resistance, the neocolonial state, and the World Bank’s agenda for the continent before and after the end of the Cold War. Through movies and novels, students also explore such developments as transformations in gender, peasants and the cash-crop revolution, and the emergence of a new working class. Same as ANT 248 and HIS 106. (Fall)
AAS 110 Introduction to African-American Studies. Drawing on the disciplines of history, anthropology, and psychology, this course introduces students to the interdisciplinary approach to the examination of the black experience in America. Same as HIS 110. (Spring)

AAS 122 History of Jazz. This study of jazz as an American musical art form is structured around the lives and music of jazz musicians across a range of instrumental, vocal, and ensemble genres. Less a strictly chronological approach, this course focuses first on jazz titans, those individuals and musical groups distinguished by their seminal and permanent influences, either with long tenures such as Louis Armstrong, Miles Davis, or Coleman Hawkins or with shorter but intense careers, such as Charlie Parker. Integrated with the jazz titans is consideration of the music of other important jazz musicians whose contributions are essential to helping shape and inform the vast jazz landscape of the 20th century. Blues, ragtime, swing, bebop, cool, progressive, and free jazz are landmark terms that help define that landscape. The influence of jazz on composers in European “classical” traditions also is considered. And, finally, study of the musical history is enhanced by considerations from sociological, linguistic, and philosophical perspectives. This course is designed for students with little or no musical training; simple, technical musical vocabulary and concepts are provided. Prerequisites: none. Same as HIS 179 and MUR 122. (Fall)

AAS 141 African-American History I. This course considers the cultural and political development of Africans in America from the 17th century to the end of the 19th century. Same as HIS 165. (Fall)

AAS 151 The Blues. The course is about the history and influence of the music known as "the Blues." The course covers development of the blues from the earliest practitioners to recent developments. Same as REL 151. (Spring)

AAS 157 Introduction to African Religions of the Diaspora. This course introduces students to the development of African religions in the Americas, Caribbean, and Canada. Religious traditions such as Africanized Christianity, Santeria, Candomblé, Vodun, and Spiritual Baptists are explored. The course not only provides students with a historical overview of each tradition, but it also explores theological frameworks, doctrinal principles, and ritual activities related to each tradition. Class format includes lectures, discussions, and films. Same as REL 156.

AAS 158 Gospel Choir. One rehearsal per week. Two concerts per semester. In addition, there may be off-campus performances in local colleges, churches, and other venues in the greater Rochester community. The Gospel Choir performs a varied repertoire of sacred music—spirituals, hymns, traditional and contemporary Gospel, and music of the praise-and-worship genre. Students may register for credit or simply sing as choir participants. (1 credit) Same as MUR 158. (Fall and Spring)

AAS 168 West African Drumming Advanced. At least one semester of previous enrollment in the Introduction to West African Percussion Ensemble. In this course, students work on expanding their repertory of rhythms from Guinea, West Africa, and on improving their playing technique on the djembe, dunun, sangban, and kenkeni. In particular, we concentrate on learning extended solo sequences for the djembe and more advanced arrangements played on the dunun, sangban, and kenkeni. Students also work on developing skills specific to performance, adding choreographed onstage movement to complement their drumming. Prerequisite: at least one semester of previous enrollment in the Introduction to West African Percussion Ensemble. Same as MUR 168. (Fall)

AAS 170 Religion and Hip Hop Culture. This course considers an often overlooked element in the study of hip hop culture—religion. Specifically, the course offers students the opportunity to examine the variety of ways that religion finds expression in the dynamic cultural medium of hip hop. Class format includes lectures, discussions, films, and video/music presentations. Same as REL 170. (Fall)

AAS 175 Environment and Food Security in Africa. This course introduces key issues in the relationship between the environment and food security in Africa. Topics include population pressure, land alienation, cash-crop agriculture, new markets, and their impact on the ability of African farmers to manage their ecosystems. Same as HIS 175. (Spring)

AAS 185 African-American Religious History. Historical survey of religions as practiced by people of African descent living in North America. Christianity, Islam, and African-derived religions are examined. Through its canvassing of doctrinal and ritual frameworks, students are afforded an opportunity to view the diverse and complex terrain of African-American religion. Class format includes lectures, discussions, and film/music.

AAS 202 The Third World. The concept of a Third World. The origins of colonialism and “underdevelopment” in the rise of European capitalism. The struggles of the colonial and postcolonial peoples for political independence, cultural autonomy, and economic development. Same as HIS 201. (Spring)

AAS 210 American Culture. At the heart of this course is the question: What are some of the critical debates that dominate American culture? The course focuses on major debates that occupy American public life in areas such as politics, religion, health, and the media. Using anthropology’s cross-cultural perspective, we explore some core cultural principles that underlie current debates in various spheres of public life. Same as ANT 245. (Spring)

AAS 216 Topics in African and African-American Life and Culture. The primary goal of this course is to provide an introduction to the interdisciplinary approach to the study of issues in African and African-American life and culture. Students attend talks given by visiting speakers, meet, discuss, and respond to issues raised. (Spring)

AAS 221 Birth and Death I: Vital Events in Our Personal Lives. How do human beings experience, make sense of, cope with, and shape birth and death in their own lives and in the lives of those who are close to them? Historical and contemporary examples from North America, Latin America, Europe, the Middle East, Africa, and Asia. Same as ANT 218, WST 217, PM 407. Permission of instructor required for first-year students. (Fall)
AAS 222 Music, Ethnography, and HIV/AIDS. Addressing the devastating effects of HIV/AIDS in the United States, United Kingdom, Tanzania, Zimbabwe, Uganda, Haiti, and elsewhere, this uniquely interdisciplinary course incorporates insights from the fields of public health, medical anthropology, and ethnomusicology. Studying the HIV/AIDS epidemic through the lens of musical expression, we ask how individuals and communities affected by HIV/AIDS have mobilized musical sound in response to the disease. Topics addressed within the class include musical representations of HIV/AIDS within queer communities; the use of music in public health campaigns to raise awareness about the disease; and the mobilization of musical performance within grassroots support groups for individuals affected by HIV/AIDS. (Spring)

AAS 228 Race and Ethnic Politics. In this course, we examine the key role played by race and ethnicity across various facets of American political life. We explore the distinct political and social identities of African Americans, Latinos, Asian Americans, and others and how these identities translate into contrasting political beliefs and different political actions. Other topics include the interaction between race and ethnicity and employment, health policy, access to criminal justice, and educational inequalities. Readings draw upon political science, law, economics, sociology, and public health.

AAS 232 Post-conflict Justice. This course explores critically how societies use a variety of legal mechanisms to achieve justice in the wake of political violence. We use anthropological approaches to explore critically the ideology behind these “transitional justice” mechanisms and their diverse impacts in specific contexts around the world, focusing particularly in Africa. What is the relationship among rule of law, political stability, and peace? How do legal solutions balance local realities, cultural norms, and customary law with universal standards of law and human rights? How do legal solutions define peace and justice, truth and punishment, and manage tensions between them? Whose voices are valorized or silenced in these debates?

AAS 239 Spiritualism in America. The primary aim of this course is to explore the historical development and structural makeup of modern American Spiritualism. This course offers students a historical narrative that ranges from the early development of modern Spiritualism in upstate New York to current forms, such as African-American Spiritual churches of New Orleans. In addition to this historical survey, the course examines major principles making up the framework of modern Spiritualism in America. Class format includes lectures, discussions, films, and field trips. Same as REL 239. (Fall)

AAS 244 Mutilated Bodies, Mutilated Discourse. “Transnational sisterhood” or cultural imperialism? Legitimate ritualized practice or outdated violent ritual? Genital cutting, female circumcision, female genital surgery? The controversy over this practice already begins with the act of its naming. If there seems to be a consensus about the physical violence imposed on the female body, why is it that western feminist discourse is suspected of perpetuating the mutilation African voices? This course seeks to provide an understanding of the context in which a fragmented “transnational sisterhood” allows for a proliferation of mutilated discourses on mutilated postcolonial bodies. Readings and films include Alice Walker (Warrior Marks), Florence Ayissi Fauziya Kassindja (Do They Hear You When You Cry), Maryse Conde, and more critical and theoretical readings from African, French, and North American authors. In English. Same as FR 243. (Fall)

AAS 246 Cry Freedom. The principal ideas of various liberation theologians—Latin American, Asian, African, Afro-American, and feminist. We also examine the social worlds in which they think and write, thus trying to see the connection between their ideas and the social environments they want to liberate. Same as REL 234. (Fall)

AAS 252 Economies and Society of Latin America and the Caribbean Since 1492.* The main thrust of the course is an attempt to provide an historical explanation for the general problem of material poverty and the attendant socio-political crises that characterize contemporary Latin America and the Caribbean. The course begins with an examination of the organization of the economies and societies in the region on the eve of the European conquest, and the factors determining the level of development attained by this time. This is followed by a discussion of the socioeconomic processes during the colonial period. The postcolonial period (which differs from one country to another) is examined in the context of the inherited socio-economic structures of the colonial period and the changing conditions in the evolving modern world system. Same as ECO 252, HIS 203. (Fall)

AAS 253 Economic and Social Conditions of African Americans in the 20th Century.* Study of selected topics concerning the conditions of African Americans in the United States during the 20th century. Topics include education, incomes, housing, family patterns, etc. Same as ECO 253W, HIS 255. (Fall)

AAS 254 West African Dance Forms I. The objective of the course is to give students an experience in West African dance. We both dance and research the historical development of performing and cultural arts in postcolonial Ghana and Guinea. These cultural practices stem from a rich history pertaining to environment, identity, and cross-cultural perspectives. Aesthetic qualities of African dance are explored through video, readings, and performance. This course culminates in a final departmental showing that is choreographed during class. Same as DAN 181. (Fall)

AAS 257 Lincoln, Douglass, and Black Freedom. In what was probably the world’s greatest century, marked by several national and international struggles for human freedom, two men stand head and shoulders above the many great men and women who participated in a civil war for American freedom: Abraham Lincoln and Frederick Douglass. At first glance, these two men had little in common; one born free on the American frontier, the other unfree in the heartland of slavery. Yet they had much in common; both largely self-educated, they both attained a mastery for words and the ability to communicate simply and directly with their fellow man. As if born to fight in one major battle for human freedom, these two men traveled diverse roads to meet on a momentous battlefield: black freedom and the future of America. Utilizing a wide range of sometimes opposing tactics, each in his own way shaped 19th-century Americans’ understanding of what it meant to be free and a citizen. Same as HIS 247. (Fall)

*Consultation with advisor and instructor strongly recommended for first-year students prior to registration for course.
AAS 280 Madness and Post-Colonial Literature. This course explores inscriptions of madness in post-colonial African and Caribbean texts. Beyond the obvious and visible signs of what is generally termed "madness" (from the pathological to the political or cultural), we ask ourselves if the postcolonial arena cannot be interpreted as a pervasive manifestation of madness, that is to say, of something fundamentally "alien, foreign" to the Known, to the imperial destructuring order, and to the disarticulated colonial and post-independent communities. By bringing together texts from different and diverse cultural and intellectual areas such as France, Guadeloupe, and Africa, we seek to confront the various "scriptures." Issues of witch-hunt, of disintegration of Juletane, the Antillean women in West Africa, from Foucault's normative panopticism to Fanon's discussion of the black experience, the postcolonial situation, articulated or silenced, will be the focus of this course. Taught in English. Same as FR 472. (Spring)

For More Information
Please visit the African and African-American studies program website at www.rochester.edu/college/aas/ or contact the Frederick Douglass Institute at (585) 276-5744 or email fdi@mail.rochester.edu.

AMERICAN SIGN LANGUAGE

“Without diversity of culture, language, and different ways of seeing the world, we would never have learned what we now know about the different ways that humans live. The linguistic and social lives of deaf people have provided us with unique and valuable ways of exploring the vast potential for human language and culture.”

—Padden and Humphries
Inside Deaf Culture (2005)

Information about the Department
American Sign Language (ASL) is the native language of many Deaf Americans. It is a natural language that is at the core of a cultural and literary tradition. As a distinctive language, the study of ASL raises many important scientific questions about the true nature of all human languages.

The ASL Program offers a major and a minor in ASL, with courses in its literature and historical tradition as well as in the linguistics and psycholinguistics of signed and spoken languages. The BA degree in ASL provides an excellent educational foundation for diverse careers or for graduate study in a wide range of fields, including linguistic research, medicine, counseling, government administration, community service, deaf education, and interpreting.

Rochester’s large Deaf community offers students many opportunities to learn and use ASL outside of the classroom. Students can participate in the University of Rochester student-run ASL Club activities and attend theatrical events and lectures in the Rochester community.

Departmental Advice for First-Year Students
Students planning to major in ASL should take ASL 101 and 102 in their first year, followed by ASL 105 and 106 in their sophomore year. As the ASL 106 class level is the prerequisite for the 200-level classes, the sooner a student begins taking ASL classes, the better. One or two elective classes, such as LIN 110, should also be completed in the first two years. We recommend taking ASL language courses in a continuous sequence, because a semester without using ASL can weaken students’ signing skills, making it difficult to advance to the next level.

Placement for Students with Existing ASL Skills
Students entering the program who have previously studied ASL should contact the ASL Program Office (273-5165 or asl@rochester.edu) to set up an ASL skills evaluation. This is an informal meeting with one of our senior lecturers, who will assess your language skills and recommend the class that will best fit your needs.

Clusters
The ASL program’s most popular cluster is Humanities Cluster H1ASL001, Basic Proficiency in American Sign Language, which includes ASL 101, Beginning ASL I; ASL 102, Beginning ASL II; and ASL 105, Intermediate ASL I.

The ASL program offers two other clusters that require advanced ASL skills.

Courses
ASL 105 Intermediate American Sign Language I. The third in a sequence of courses, this course focuses on further development of conversational skills in ASL. Students acquire and expand different conversational strategies and increase ASL vocabulary. Grammatical principles and functions are emphasized. Appropriate cultural behaviors and conversational regulators in ASL continue to be an important part of class. Information on Deaf Culture/history is expanded. Experience with the local Deaf community is required. Prerequisite: ASL 102 in the immediately preceding semester or permission of the instructor. (Fall, Spring)

ASL 106 Intermediate American Sign Language II. The fourth in a sequence of courses, this course focuses on further development of conversational and narrative skills in ASL. Students learn and expand different conversational strategies and increase ASL vocabulary. An introduction to analysis of grammatical principles and
functions is included. Appropriate cultural behaviors and conversational regulators in ASL continue to be an important part of class. Experience with the local Deaf community is required. Prerequisite: ASL 105 with a grade of B or better in the immediately preceding semester or permission of the instructor. (Fall, Spring)

**ASL 203 Advanced ASL.** The fifth in a sequence of courses, this course is designed for the advanced study of ASL. It provides students with the opportunity to increase their ASL expressive competence and to use ASL in a variety of discourse and narrative settings. Skills to be developed are storytelling, semantic awareness analysis, indepth exploration of ASL grammar and complex uses of space, ways of making transitions between ideas, use of classifiers, and determining appropriate perspective in specific texts. Experience with the local Deaf community through interviews is required. Satisfies the upper-level writing requirement. Prerequisite: ASL 106 with a grade of B or better in the immediately preceding semester or permission of the instructor. (Fall)

**ASL 205 Art of Translation: ASL and English.** This course explores the meaning of translation, practices various translation methods, and analyzes both written English and recorded ASL texts, with a focus on the analysis of English texts and the development of ASL translations. Extensive discussion of various types of texts and the factors that must be considered when preparing an accurate ASL or English translation contribute to students’ translation work. Satisfies the upper-level writing requirement. Prerequisite: ASL 106 with a grade of B or better or permission of the instructor. (Spring)

**For More Information**
Please visit the American Sign Language program website at www.asl.rochester.edu.

**AMERICAN STUDIES**
**(MULTIDISCIPLINARY STUDIES CENTER)**

American Studies is a great choice for anyone interested in a broad education in the humanities and social sciences.

**Information about the Program**
The American studies program offers students the opportunity to examine American history, culture, and social life within an interdisciplinary framework. This approach, drawing on faculty members in departments such as English, art and art history, political science, classics, religion, music, anthropology, philosophy, history, and film and media studies, allows for especially rich explorations of such topics as the arts in American society; race, class, gender, ethnicity, and religion as aspects of American identity; and ideas and institutions that have shaped the United States, past and present. The major enables students to range freely across disciplinary boundaries while developing an area of focus. Students also consider the role of the American nation in a global context. Students may also minor in American studies.

**Program Advice for First-Year Students**
First-year students should be aware that American studies is a very flexible major, allowing students to count toward its requirements virtually all of the courses in the College that deal with the United States. The courses fit into three tracks: the Arts in American Culture, Identity and the American Nation, and American Thought and Institutions. In many of the participating disciplines, first-year students need not be limited to 100-level courses; students should check with departmental advisors and individual instructors or consult the program director to find out if a particular 200-level course is appropriate for them. The courses listed below do not exhaust the list of possibilities for first-year students. All American studies students receive close advising from the program director and the Multidisciplinary Studies Center to ensure a personalized course of study.

**Courses**

**SPECIALIZATION TRACKS**

**ENG 116 Introduction to African-American Literature.** *(Arts in American Culture track)* This course surveys African-American literature of a variety of genres—poetry, drama, autobiography, fiction, and nonfiction—with a focus on the 18th and 19th centuries. The course interprets this tradition not only as the production of American writers of African descent but also as a set works that display formal characteristics associated with black cultural traditions. Discussion topics include the meanings of race, the construction of black identity, and literature as historical document. Special attention is paid to approaching literary texts from a variety of critical perspectives. Featured writers include Phillis Wheatley, William Wells Brown, Frederick Douglass, Harriet W. Wilson, Charles W. Chesnutt, W. E. B. DuBois, Paul Laurence Dunbar, and more. Course requirements include two formal writing assignments, biweekly reading responses, and class participation. (Fall)

**HIS 166 Liberal America, 1929–1973.** *(American Thought and Institutions track)* This course is an examination of the development of American politics, society, and culture between the onset of the Great Depression and the Watergate scandal. It focuses on the creation and consolidation of the “New Deal order”—a liberal
political economy centered on a constrained corporate capitalism, a modest welfare state, and a national security apparatus designed to wage the Cold War and extend American power abroad. (Fall)

**HIS 174 American Military History.** (American Thought and Institutions track) American history has been largely shaped by wars. This course surveys the history of American wars; the military, naval, and civil institutions that have been created to serve the changing needs of national defense; and the citizen-soldiers who have preserved the liberty of the Republic. (Fall)

**PSC 105 Introduction to American Politics.** (American Thought and Institutions track) This course introduces students to the systematic study of American political institutions, processes, and behavior. We focus on key questions about the political system and how political scientists address these questions. The strategic actions and interactions of various political actors are examined from a variety of theoretical and empirical approaches. Political polarization, economic inequality, presidential power, the role of the administrative state are discussed throughout the course. (Fall)

**REL 170 Religion and Hip Hop Culture.** (Arts in American Culture and Identity and the American Nation tracks) This course considers an often overlooked element in the study of hip hop culture: religion. Specifically, the course offers students the opportunity to examine the variety of ways that religion finds expression in the dynamic cultural medium of hip hop. Class format includes lectures, discussions, films, and video/music presentations. (Fall)

Many departments that contribute to the interdisciplinary American studies major offer courses that are appropriate for first-year students. Students should check with departments if they are interested in 200-level courses not listed here.

**For More Information**

Please visit the American studies program website at www.rochester.edu/college/msc/americanstudies.html or contact the American studies program director, Professor John Michael, at john.michael@rochester.edu.

---

**ANTHROPOLOGY**

"Never doubt that a small group of thoughtful, committed citizens can change the world: Indeed, it is the only thing that ever has."
—Margaret Mead

**Information about the Department**

Anthropology is the comparative study of humanity. The Department of Anthropology at the University of Rochester specializes in cultural anthropology, which specifically examines the diverse languages, social relations, and cultural meanings that humans have developed. Anthropology courses explore the concepts and methods that anthropologists use to understand contemporary social issues and cross-cultural variations in human experience. Students address questions of race, class, and gender and engage with current thinking about the future of cultural diversity in a globalizing world.

No two students have the same experience in the anthropology concentration. Undergraduate majors are encouraged to develop their own special interests through a broad selection of electives, independent study, internships, community research, summer field schools, and study abroad. Many courses include opportunity for hands-on research. Faculty members have conducted fieldwork in Brazil, China, Honduras, India, Indonesia, Nepal, the Philippines, Papua New Guinea, Rwanda, and the United States—providing a vast range of experience and expertise for students to utilize.

**Departmental Advice for First-Year Students**

Cultural Anthropology (ANT 101) provides an overview of the discipline and is the most common starting point for students interested in the program. The department also offers several introductory courses intended primarily for first and sophomores in addition to a variety of electives that are open to first-year students. Students considering a concentration in anthropology should take ANT 101 during their first year, followed by ANT 201 in the spring of the sophomore year.

Anthropology is one of the most flexible social science degrees there is. Common careers for majors include nonprofit and NGO work, advertising, market research, and consulting. Many others enter graduate programs in medicine, law, or public health. Because anthropology majors build generalizable skills like critical thinking and analysis, cross-cultural and interdisciplinary compari-
son, and the ability to design and conduct research, they are suited to successfully pursue a variety of careers—wherever interests may lie or develop.

International Baccalaureate (IB)
Social Anthropology—Students who receive a higher-level exam score of 6 or higher are awarded credit for ANT 101 after completion of any other course with a grade of C or better. No credit is granted for subsidiary-level exams.

Clusters
The department offers four different clusters: Interpretation of Culture, Power and Inequality (formerly Social Analysis), Anthropology of Globalization, and Medical Anthropology.

Courses

Introductory Courses

ANT 101 Cultural Anthropology. This course introduces students to the distinctive ways in which cultural anthropologists do field research and write about it. Students are asked to think critically and comparatively about matters such as race, politics, gender, kinship, and religion, and to consider the fate and value of cultural diversity in a world connected by global movements of people, money, media, and technologies. This class is required for the anthropology concentration. (Fall and Spring)

ANT 102 Introduction to Medical Anthropology. This course explores anthropological interpretation, research, and writing on the ways different peoples understand and deal with issues of illness and disease. (Fall)

ANT 104 Contemporary Issues and Anthropology. This course explores the complex interrelation of race, class, and gender in contemporary America, both in people’s subjective identities and in their objective life chances. The materials assigned include first-person narratives of particular life experiences; quantitative analyses of general statistical patterns; and long-term historical explanations of these experiences and patterns. (Irregularly)

Electives Open to First-Year Students

Below is a sampling of electives offered in Fall 2017. Elective offerings change every semester. More cross-listed electives are available through other departments.

ANT 121 The City: Contested Spaces. What does it mean to live in a city? Can you reshape people’s lives by redesigning city spaces? How do city dwellers, architects, politicians, and others interact with and appropriate their own urban past? This interdisciplinary course introduces students to different ways of looking at cities, framing them as the contested products of a range of human actions. Through an in-depth examination of four complex urban environments—Chicago, Istanbul, Delhi, and Rome—we learn about the interplay between space, aesthetics, time, memory, and power. Weekly lectures by an anthropologist, an architect, and a historian complement discussions of film, historical documents, fiction, and relevant case studies. In addition to writing four short papers, students hone their analytical skills by observing urban life and form with a series of field studies in the city of Rochester.

ANT 235 The Black Body: Intersecting Intimacies. In the United States, popular cultural understandings of race have often located blackness within the body: in DNA, in blood, in skin, in hair texture, in facial features. How does race get mapped onto the body? In this interdisciplinary course on race and embodiment, students will think critically about how black bodies “matter” in the contemporary United States and explore how blackness intersects with other social categories, such as gender and sexuality, at the site of the body—all while investigating how these categories are socially constructed and can and should be troubled, blurred, and contested in the practice of social life.

ANT 257 Chinese Society After Mao. This course adopts an anthropological approach toward understanding the dramatic socio-cultural transformations that have followed in the wake of China’s post-Mao economic reforms. What happens when a society officially committed to economic and gender equality witnesses the rise of stark social divisions? We examine such issues as the creation of a market economy, the rise of new social classes, rural to urban migration, changing ideologies of gender and sexuality, new attitudes toward education and work, transformations in family life, religious revival and conversion, and the influences of global popular culture and mass consumption. Throughout our discussions we consider the implications of these changes for China’s political, social, and economic futures.

ANT 264 Islam and Global Politics. This course serves as an introduction to the transformation of religious belief and political authority in the Islamic world during the colonial period, to the role of popular culture in creating support for American military intervention in the Islamic world during the Cold War, and to the rise of Islamic militancy after the Cold War.

Core Courses

These courses comprise the theoretical foundations of anthropology, and each is usually offered once per academic year. Majors must take ANT 201 and at least two others.

ANT 201 Theory and Method in Anthropology. A survey of major developments in anthropological thought. This class explores the relationship between sociocultural theory and the methodologies used by anthropologists to conduct ethnographic research—such as participant observation (fieldwork), interviewing, and various writing strategies. Prerequisite: ANT 101 (Spring)

ANT 202 Modern Social Theory: Key Texts and Issues. A close textual analysis of four authors who established the framework of modern social theory—Adam Smith, Karl Marx, Max Weber, and Sigmund Freud—and how contemporary social scientists use their work. (Fall)

ANT 203 Ritual, Myth, and Cosmology. A survey of the major anthropological approaches to the study of life-cycle rituals, origin myths, witchcraft accusations, animism, and altered states of consciousness, such as spirit possession and shamanism. The course
culminates with a critical examination of the recent “ontological turn” in anthropology.

**ANT 204 Ethnographic Themes.** This course is a critical study of the role ethnographic texts play in posing and answering questions about human culture and society. This study may take the form of intensive readings on a particular society or area, or an extensive survey of ethnographic “classics” and their critics. (Spring)

**ANT 205 Theories and Debates in Anthropology.** This course is an examination of contemporary and historical debates that have shaped theory and method in cultural anthropology. (Fall)

*For More Information*
Please visit the anthropology program website at www.rochester.edu/college/ant/.

---

**ARCHAEOLOGY, TECHNOLOGY AND HISTORICAL STRUCTURES (MULTIDISCIPLINARY STUDIES CENTER)**

**Program Advice for First-Year Students**
This program is designed for undergraduate students interested in the humanities (archaeology, architecture, art history, classics, history) with a desire for critical insight into the material culture and technology of preindustrial societies; in mathematics or natural sciences with a desire to study the impact of technology on ancient and preindustrial cultures; or in an interdisciplinary engineering field emphasizing technology, design, materials, structures, and architecture in the context of historical monuments. Students may pursue Track A, a course-based path requiring 11 courses, or Track B, a research-based path comprising nine courses plus an 8-credit senior project (subject to faculty approval). The major offers pathways in (1) engineering, (2) archaeology and architecture, (3) history, and (4) science, technology, and society. Foundation courses provide basic competencies in engineering structural analysis, archaeology, and architectural history common to all pathways. Depending on course selection, the major may be designed to satisfy any of the three divisions of the College: Humanities, Social Sciences, or Natural Sciences/Engineering as well as to prepare students for graduate studies in archaeology, architecture, civil or mechanical engineering, art history, classics, or history. This is not a professional program in engineering or in architecture and does not prepare graduates for licensure in either of those professional areas.

**Courses**

**Fall Semester**

**Foundation Courses**

**ME 104 The Engineering of Bridges.** An introduction to the art of bridge building based on the study of the engineering and technological problems involved in the design, construction, and collapse of bridges from antiquity to the present time. The course includes several case studies of major historical bridges selected for their structural significance. Students learn how to calculate the forces acting on structural elements, how these forces depend on the bridge structural form, how the form itself is conditioned by the structural materials, and how forces are measured with electromechanical instrumentation. The study includes fundamental notions of mechanics, strength of materials, structural behavior, instrumentation failure analysis, and design optimization. Working in teams, students use constructive experimental models as well as computer-aided programs to design, build, instrument, and test realistic bridge projects. This is a self-contained course open to all Rochester undergraduates.

**Core Courses**

**AH 114 Creating Architecture.** Buildings are among the most public, visible, and long-lived artifacts that a culture creates. The built environment both serves as a repository of cultural information and exerts an influence that extends beyond the society that created it. This introductory course explores a visual survey of architecture from ancient times to the present day using a slide lecture and discussion format that invites each student to participate in the discourse of the class. The studio portion of this course provides students an opportunity to create their own structures from sketch to three-dimensional pieces exploring basic design elements and
materials. No prior studio experience is necessary. Students are expected to purchase basic tools used in this course. A materials supply list is provided at the first class. Students are expected to pay the $50 studio fee to cover the use of shared supplies and equipment. To be added to the wait list, please email stephanie.ashenfelder@rochester.edu.

AH 251 Prehistory of Ancient Peru: The Incas and Their Ancestors. From Machu Picchu to the geoglyphs on the Nasca Desert, the Andean region of South America has a long and rich pre-Columbian history. This course surveys the archaeological approaches to understanding the development of Andean cultures that ranges from hunter-gatherers to the Inca Empire. Some of the prehistoric cultures we examine include Caral, Chavin, Nasca, Wari, and the Inca. This course also discusses plant and animal domestication, inequality, gender, ceramics, urbanization, and the rise and fall of states and empires.

CLA 115 Roman World. An examination of the history of Rome. Over the course of a few hundred years, Rome grew from a small village into the capital city of one of the world’s greatest empires. How did a small town in central Italy succeed in imposing its government and cultural values throughout the Mediterranean world and beyond? And why did the Roman political and cultural system ultimately fail? Why do ancient Roman values and accomplishments still resonate with us so much today? Throughout this class, these are some of the questions we attempt to answer.

Elective Courses

AH 263 The Art and Archaeology of Ancient Egypt. Ancient Egypt has long fascinated the public, from ancient scholars to modern video game representations. But who were the ancient Egyptians? What led to the powerful artistic and cultural legacy of this ancient area? This course delves into the main concepts of Egyptian art, archaeology, and history, ranging from the Predynastic period to the last gasp of Cleopatra VII and the Ptolemaic Kingdom. Topics range from Egyptian religion, temple culture, funerary remains, monumental constructions, daily life, domestic archaeology, dynastic progression, and the afterlife. This course also discusses modern representations of ancient Egypt and the enduring symbols of the culture.

Spring Semester

Foundation Courses

CLA 220 Classical Archaeology: Greek Art and Archaeology. This course examines the physical remains of ancient Greek civilization, with an emphasis on architecture, sculpture, painting, and other visual arts in order to understand Greek culture and society.

ME 106 Engineering in Antiquity. Application of engineering principles and technology to the design and performance of engineering structures from antiquity to the preindustrial world. Engineering principles (transfer of forces, momentum, and power), study of primary texts (in translation), and examination of existing structures/monuments. Primary texts include selections from Aristotle’s Mechanical Problems, Vitruvius’ Ten Books on Architecture, Leonardo’s Notebooks, and Galileo’s Dialogues on Two New Sciences. Emphasis on engineering design of engineered structures from the Bronze Age to the 18th century. Topics: evolution of engineered materials (metals, wood, stone, marble, concrete, composites) and limitations; Bronze Age fortifications; structural design of Greek temples; Roman aqueducts, siphons, and vaults; force, power sources, and transmission; failure of materials; lifting devices; construction engineering; columns, beams, vaults, trusses, frames; instruments of warfare. Open to all undergraduates. Prerequisites: none.

Elective Courses

AAS 204 Early Civilization of Africa. The course examines the environmental, social, and cultural dynamics that led to urbanism and other aspects of cultural transformation in Africa before the advent of European colonialism. Topics include concepts of civilization and civilizations of Africa, including those of the Nile Valley, the Horn of Africa, the Western Sudan, Zimbabwe, the Inland Niger Delta, and the West African Rainforest. The role of the peripheries in the development of these centers is looked at.

For More Information

Please visit the archaeology, technology and historical structures program website at www.rochester.edu/college/ATHS/index.html.

ART AND ART HISTORY

“...in denying artists their rightful place in the public consciousness, we are in fact negating the most creative part of ourselves individually and collectively and in so doing are also damning our future to one without experimentation and the vision needed to give it meaning.”

—Carol Becker (1997)

“The Artist As Public Intellectual”

Department Overview

The Department of Art and Art History is dedicated to liberal education in the creation and historical study of the visual arts. Our offerings combine theory and practice and deploy interdisciplinary historical and conceptual frameworks across a wide range of interpretative techniques and forms. Undergraduate majors, minors,
and concentrations in art history, visual studies, and studio art are available.

Through our undergraduate degree program in studio arts, students explore form, space, and function using traditional media and new technologies. Studio students may take courses in a variety of media, including painting, printmaking, sculpture, photography, and video.

Art history and visual studies students pursue courses in history and theory across visual media. In art history, students study the history of painting, sculpture, architecture, and other art forms from antiquity to the present covering a wide range of traditions and geographical regions across the world.

Students may undertake internships in Rochester’s diverse and rich cultural institutions. The department also offers the unique Art New York residential program in New York City.

**Studio Arts Program**
The studio arts program of the Department of Art and Art History focuses on the production, exhibition, and analysis of art. The facilities in Sage Art Center provide access to all the materials, supportive resources, faculty, and staff necessary for a rich studio experience. Our program is focused on contemporary approaches to art production and strives to produce technically adept students with an understanding of art’s place in the world. Our program of study invites, accommodates, and engages individuals with little or no previous art experience. It also provides a rich environment for thoroughly intensive study.

Studio art majors are vital participants in the activities of the department and the art community in general. Majors are expected to establish a presence at Sage Art Center that promotes an environment conducive to rich, creative art production. By the senior year majors should be seen as valuable resources for the students in all introductory-level courses. While our introductory-level courses provide a foundation built on more prevalent art media—such as photography, painting, sculpture, video, collage, and drawing—the advanced-level courses make available the experimental and interdisciplinary approaches often used in contemporary art production.

Off-campus study opportunities are available for majors and non-majors alike. The Art New York program provides students with the opportunity to live and learn in New York City. A semester of internships and course work in this culturally rich environment is structured for any individual who wishes to enhance his or her knowledge of the world of contemporary art and culture with firsthand experience.

Study abroad is encouraged for majors and non-majors during a fall or spring semester in the University’s European Arts Internship program. In Europe, there are opportunities to work in institutions such as the Victoria and Albert Museum and the Museum of London, and internships can be arranged in various locations, including Paris, Brussels, Rome, Bonn, and Madrid.

**Art History and Visual Studies**
Art history and visual culture studies are areas of study in which the information and methodologies of many fields come together. The disciplines of art history/visual culture involve the analysis of works of art in many contexts—understanding form and why and how we make use of it. It is also the investigation of its historical contexts and modes of production. These inquiries include economic, social, and gender issues; problems of patronage and taste; and questions of exchange, reception, conservation, and restoration. Art historical studies draw upon adjunct areas of study such as cultural and intellectual history, psychology, literary criticism, religion, philosophy, sociology, archaeology, and the history of science. The history of art and visual culture studies are ideal for students who wish to acquire a general cultural understanding of global culture, to develop analytical and writing skills, and to sharpen critical sensibilities.

**Departmental Advice for First-Year Students**
At Sage Art Center, our 100-level courses provide a foundation for art media such as photography, painting, sculpture, video, and drawing, our 200-level courses make available the experimental and interdisciplinary approaches often utilized in contemporary art production. Advanced studio courses focus on interdisciplinarity, allowing students to expand their artistic expression to incorporate other interests and disciplines. Because studio class size is limited, first-year students should contact the department to enroll in courses.

Courses in art history are designed to give students an understanding and appreciation of works of art, individually, in relation to each other, and in their social and historical contexts. Introductory courses cover broad historical periods and serve to introduce the methods and problems of art history. They are useful to both first-year and upper-class students who want a general overview.

Sophomores, juniors, and seniors, as well as first-year students who have had a course in art history or some other relevant preparation, may begin taking art history courses at the 200 level, as well as the 100 level. The 200-level courses offer similar introductions but in much more defined areas. These are useful cognate courses for those students studying a specific period or culture in another discipline and are also the building blocks for any major or minor within the department. Seminars are indicated by the 300 level and are open to advanced students from other disciplines as well as to art history majors.

**International Baccalaureate (IB)**
Visual Arts—Students who receive a higher-level exam score of 6 or 7 are awarded up to four credits in studio arts upon completion of a 100-level course with a “B” or better.

**Advanced Placement (AP)**
If students receive a score of 4 or 5 on the Art History AP exam, credit is awarded after consultation with the department. Four advanced placement credit hours (with a score of 4 or 5) can be granted if a “B” or higher is earned in any 100-level studio course.

**Clusters**
Students whose major is in the social sciences or natural sciences and engineering divisions are invited to pursue a cluster in art and art history. A brochure of our clusters is available in the departmental office. All studio and art history courses are included in at least one cluster. Be sure to check with the department directly.
Courses

Art History
For course updates, go to www.rochester.edu/college/aah/courses/ah.html.

Studio Art
(A supplies fee of $50 is charged for each course.)

AUDIO AND MUSIC ENGINEERING

“Imagine. Explore. Create.”

Information about the Major
The audio and music engineering (AME) major combines studies in engineering and applied sciences with music and audio production to give students a technically rigorous, design-based education in the field of audio, music, and sonic engineering. The curriculum is built on a foundation of basic math and science and integrates elements of music, audio content production, acoustics, fundamental engineering science, signal processing hardware and software, electronics, and software engineering. Through a series of design and project courses integrated with their other coursework, students build a project portfolio throughout their studies capped by a senior design project. The bachelor of science in AME (BS AME) is offered.

Departmental Advice for First-Year Students
The major requires completion of courses and portfolio projects in five subject areas: recording arts and sound design, acoustics, audio electronics, signal processing, and software design. The curriculum provides a broad education in the basics of audio and music engineering as well as in-depth studies and design experiences. Once completing the baccalaureate degree, our graduates are prepared to enter the field or pursue further study at the graduate level. Entering students with an interest in pursuing the AME program are assigned faculty advisors to help with academic program planning throughout their four years of studies.

Courses

AME 140/EAS 103 Introduction to Audio and Music Engineering. The course provides an introduction to the science and technology of audio. Students learn about the vibration of strings, musical tuning systems, overtones and timbre, and modes of oscillation through the concept of a guitar. Fourier analysis, transducers, passive electrical components, and circuits are introduced when discussing amps and audio components. The class utilizes hands-on projects to introduce the fundamental concepts of electronics, including voltage, current, resistance and impedance, basic circuit analysis, ac circuits, impedance matching, and analog signals. The course then moves on to introduce basic digital signal processing concepts using Arduinos and Pure Data to learn about conversion of sound to digital format, frequency analysis, digital filtering and signal processing, and musical sound synthesis.

For More Information
Please visit the electrical and computer engineering website at www.ece.rochester.edu-major-minor-major_ame.html.
“Biology was the glamour science of the second half of the 20th century, just as physics was the glamour science of the first half. What is glamour science? It is one that captures the public interest and serves it well. No other science has contributed as much to our understanding of ourselves (evolution and development), our relationship to our planet (ecology), or offers more promise for improving the quality of human life in the 21st (genetics, molecular medicine, genetic engineering).”

—Martin A. Gorovsky
Rush Rhees Professor of Biology

Information about the Department

Through direct observation and experimentation, biologists study living systems and how organisms interact. An exciting program in the biological sciences is available to undergraduate students at the University of Rochester. This program in the College and the School of Medicine and Dentistry provides more than 64 courses for undergraduate students, including lectures, laboratories, specialty seminars, and teaching and research experiences.

The BS in biological sciences, with seven tracks available in modern areas of biology, makes it possible for students to concentrate in specialized fields of study, including biochemistry, cell and developmental biology, computational biology, ecology and evolutionary biology, microbiology, molecular genetics, and neuroscience. For more information on specific major requirements, visit www.rochester.edu/college/bio/undergraduate/academics/majors.html.

In addition, there are many opportunities for undergraduates to become directly involved in biological research with well over 200 faculty located on the River Campus and in the Medical Center. For more information on how to get involved in research, visit www.rochester.edu/college/bio/undergraduate/research/index.html.

Departmental Advice for First-Year Students

The BA in biology and the seven BS curricula offered by the Undergraduate Program in Biology and Medicine require the same first-year introductory coursework:

- BIO 110 Principles of Biology I or BIO 112 Perspectives in Biology I
- BIO 111 Principles of Biology II or BIO 113 Perspectives in Biology II
- BIO 190 The Human Genome or BIO 198 Principles of Genetics

Undergraduates preparing to major within the biological sciences would usually start this sequence in their first year by registering for BIO 110 or 112 in the fall, BIO 111 or 113 during the spring semester, and then taking either BIO 190 or BIO 198 in the fall of sophomore year.

Intended biology majors usually begin their required coursework in chemistry in addition to their biology coursework during the fall semester of their first year. Calculus courses may be delayed for one or two semesters if a first-year student feels that three courses in science may be too intensive.

Please note that BIO 110 is offered both in the fall and spring semesters. Intended biology majors are advised to take BIO 110 in the fall of their first year, while sophomores, juniors, seniors, and biomedical engineering (BME) students are encouraged to take BIO 110 in the spring. If planning a spring BIO 110 enrollment, please note: the CHM 131 pre/corequisite is still required.

A typical course plan for the first four semesters is available online for students who are preparing to major within the biological sciences at www.rochester.edu/college/bio/undergraduate/advising.html.

Advanced Placement (AP)

Students interested in biology who do not have AP credits should enroll in the BIO 110/111 Principles of Biology I and II course series.

Students with an AP Biology score of 4 or 5 will receive general college credit. This credit may not be used to satisfy introductory course requirements for any of the UPBM majors. Students retain these general college credits regardless of the biology courses they have taken.

Students with AP credit are eligible to register for BIO 112/113 Perspectives in Biology I and II, which cover the material at a greater depth than BIO 110/111 Principles of Biology I and II and are intended for students with a strong biology background.

International Baccalaureate (IB)

Biology—Students who receive a higher-level exam score of 5 or better will receive four general college credits but not credit toward the biology major. Students retain these general elective credits regardless of the biology courses they take. No credit is granted for subsidiary-level exams.

Students with IB credit who scored a 7 or higher are eligible to register for the BIO 112/113 Perspectives in Biology introductory courses, which cover the material at a greater depth than the BIO 110 Principles of Biology I/BIO 111 Principles of Biology II. BIO 112/113 Perspectives in Biology I and II are designed for students with a strong biology background.

**First-Year Introductory Courses**

**BIO 110, BIO 111, BIO 112, and BIO 113.** For those students who intend to major in biological sciences or have interests in medical school or health profession fields. May also be used to satisfy cluster requirements for N1BCS008, N1BIO002, N1CHM003, N1EES005, N1INT015, N4ME004.

**Fall Semester**

**BIO 110 Principles of Biology I.** First semester in a course sequence for all biology majors. The course provides an introduction to biochemistry, cell biology, molecular biology, and animal physiology. Emphasis is placed on quantitative learning and data analysis; weekly workshops emphasize the construction and interpretation of graphs. Prerequisite: Completion or concurrent enrollment in CHM 131 or equivalent.

**BIO 112 Perspectives in Biology I.** The first semester in a yearlong introductory course sequence. Material includes fundamental aspects of genetics, biochemistry, and molecular and cellular biology. This course differs from BIO 110 in that material is covered in greater depth and there is greater emphasis on experimental approaches, data analysis and quantitative methods, and includes additional readings of original research papers. BIO 112 examines current topics in the news that may include genetically modified organisms (GMO), human genome editing, vaccines, and embryonic stem cells. Open only to first-year prospective majors or by permission of instructor. Both BIO 110 and BIO 112 are designed for majors and prepare students for upper-level biology courses. BIO 112 is designed for first-year students with a strong biology background. Prerequisites: Students with a score of 4 or 5 on the AP Biology test or an IB score of 7. Completion or concurrent enrollment in CHM 131 or equivalent.

**Spring Semester**

**BIO 111 Principles of Biology II.** Part of a two-course introductory sequence designed for majors in biology. Topics include evolution (natural and sexual selection, population genetics, speciation, origin of life), biodiversity, physiology, ecology (communities, ecosystems, biomes) and conservation biology. Concurrent enrollment in BIO 111P is not required but is strongly recommended for current or prospective biology majors and is required for biology majors. The laboratory course is also recommended for those intending to apply to medical school. Prerequisites: BIO 110 or AP Biology score of 4 or 5.

**BIO 117P Introductory Biology Laboratory.** This is the lab course that accompanies the lecture courses Principles of Biology II, Perspectives in Biology II, and Intro to Organismal Evolutionary Biology. The content of the course is drawn from the lecture material. Topics include plant and animal diversity, biology of protists, animal behavior, bioinformatics, and physiology. Emphasis is placed on problem solving, critical thinking, and experimental design. While this course is designed to accompany BIO 111 and 113, students taking these classes are not required to register concurrently for BIO 117P. BIO 117P is strongly recommended for current or prospective biology majors. This lab course is recommended for those intending to apply to medical school. Prerequisite: Past or concurrent enrollment in BIO 111/113.

**Introductory Biology Course Comparison**

Which course is right for you?

**Similarities**
- Both courses are for majors and minors in biology as well as all premedical tracks.
- Both courses employ problem-based, peer-led small group work shops.
- Both courses emphasize “experimental” approaches and the quantitative skills needed to understand biological research.

**Differences**
- BIO 110 Principles is for first-year students to provide a fundamental understanding of basic biological and chemical concepts in preparation for their upper-level courses in biology.
- BIO 112 Perspectives is also for first-year students who have demonstrated knowledge of some basic biological and chemical concepts. This prior knowledge enables topics to be covered in greater depth and provides the opportunity to cover additional current biological topics and to read original research papers.

Students who would like to discuss their choices should attend the "Q & A" sessions and/or go to the biology table at the Academic Open House during Orientation or contact the instructor directly. Biology course descriptions and instructor information are available online at https://cdcs.ur.rochester.edu.

**Courses for Non-Science Majors/Cluster Courses**

BIO 101, BIO 102, BIO 104K, BIO 109, and BIO 256 are for students who do not want to major in biology but would like to pursue a bio cluster for the Natural Sciences divisional requirement of the Rochester Curriculum. See course descriptions below for applicable clusters. Please note that students with interests in medical school or health profession fields should consider taking BIO 110 or BIO 112.

**BIO 101 Genes, Germs, and Genomics: An Introduction to Modern Biology.** An introduction to selected principles of the biological sciences, explored through current topics in biology. Areas of study include the organization of life, the scientific method, and understanding data. Biological and biomedical topics of contemporary interest to be discussed may include but are not
limited to cancer, aging, stem cells, genetic engineering, genetic counseling, the genetic basis of human disease, personal genomics, and the human microbiome. Classes involve lectures and workshop-style cooperative learning, which requires students’ active participation. BIO 101 can be used in the following natural sciences clusters: “Biological Principles” (N1BIO002), “Chemistry and Life Science” (N1CHM0003), and “Life on Earth” (N1INT015). Prerequisites: none.

**BIO 102 Natural History.** Introduction to observation and identification of plants and animals in their environment, with emphasis on locally common trees, birds, and insects. Much class time is spent out of doors, usually visiting habitats within walking distance of campus but with two to three longer field trips. We also read and discuss selections of nature writing, ranging from Darwin to contemporary authors. Grades are based on identification quizzes, a required field journal, and a natural history essay inspired by your field observations. This course is designed for the non-science majors. The course can be used for four clusters, N1BIO003 “Understanding the Biological World,” N1EES005 (Life Through Time), and H1SUS001 (Sustainability). Prerequisites: none.

**BIO 104 Ecosystem Conservation and Human Society.** This course examines issues in conservation biology from a viewpoint of costs and benefits to human society. Topics include the services that ecosystems provide to human society, how the value of these services is determined, and how consideration of such services influences political policy at local, national, and international levels. BIO 104 may be used in “Biological Principles” (N1BIO002) and “Understanding the Biological World” (N1BIO003) biology clusters. Prerequisites: none.

**BIO 109 Darwin and Darwinism.** The first half of this course introduces nonmajors to evolutionary biology, focusing on the evidence that Darwin himself marshaled. This lecture section of the course considers pre-Darwinian theories of life, the rise of Natural Theology, the appearance of the Origin of Species, and a brief survey of modern evolutionary biology. The second half of the course considers the wider implications of the Darwinian revolution, including religious and philosophical implications. This seminar section of the course considers Church-science interactions before and after Darwin, the creation-evolution debate, and the place of teleology in nature, among other topics. BIO 109 may be used in the “Understanding the Biological World” (N1BIO003) biology cluster. Prerequisites: none. Offered every other year (odd year rotation).

**BIO 256 Darwin and Religion.** Equal parts science, history, and philosophy, this course examines the interaction between science and religion, especially as it pertains to Darwin’s theory of evolution. Through primary and secondary readings, students investigate whether the relationship between science and religion has been primarily one of conflict or harmony; how religious context influenced both the formulation and acceptance of Darwin’s theory; whether evolution is incompatible with common religious views; and the ongoing relevance of Darwinism to debates over the relationship between science and religion. These questions are explored in part through an examination of Darwin’s own evolving scientific, philosophical, and religious views. BIO 256 may be used in the “Understanding the Biological World” (N1BIO003) biology cluster. Prerequisite: One previous course in philosophy, religion, or a natural science. Only one (PHL/BIO/REL 256 or BIO 109) can be taken for credit. Offered every other year (even year rotation).

**BIOMEDICAL ENGINEERING**

“Engineering is not merely knowing and being knowledgeable, like a walking encyclopedia; engineering is not merely analysis; engineering is not merely the possession of the capacity to get elegant solutions to nonexistent engineering problems; engineering is practicing the art of the organizing forces of technological change. . . . Engineers operate at the interface between science and society.”

—Gordon Stanley Brown

**Information about the Department**

Biomedical engineering (BME) involves the application of engineering science and technology to solve problems in biology and medicine. This broad area contains many career opportunities, ranging in scope from advanced research to engineering practice in industrial or clinical settings. The Department of Biomedical Engineering, in conjunction with strong academic programs in the basic sciences and other engineering disciplines at the University of Rochester, offers outstanding training in this rapidly growing field.

**Departmental Advice for First-Year Students**

The interdisciplinary nature of biomedical engineering requires expertise in both the biological and engineering sciences. The University of Rochester offers several avenues of academic study in biomedical engineering, each of which can be structured to satisfy premedical or other health professions. The minor in biomedical engineering (24 credits) provides opportunities for students majoring in other disciplines to obtain substantive exposure to the field of biomedical engineering.

The Bachelor of Science degree program in biomedical engineering is accredited by the Engineering Accreditation commission of ABET, www.abet.org. Our curriculum emphasizes fundamental engineering and design principles taught in the context of current problems in medicine and biology. A series of nine core courses required of all biomedical engineering students provides a solid foundation in engineering principles relevant to biomedical engineering practice. To ensure in-depth training, students are required
to complete a sequence of four engineering courses in a focus area of biomedical engineering. These areas of concentration are biomechanics, biosignals and biosystems, cell and tissue engineering, and medical optics. The program is capped with a biomedical engineering senior design course required for all students. 

*All students interested in pursuing a BS in biomedical engineering are assigned a biomedical engineering faculty advisor.*

### Courses

**BME 101/EAS 101 Introduction to Biomedical Engineering.** The course provides an introductory overview of the multidisciplinary field of biomedical engineering. Students learn about the application of elementary engineering principles to the analysis of physiological systems and are provided with a basic introduction to the use of computers as tools for solving engineering problems. Course topics include biomechanics, cell and tissue engineering, biosignals and bioinstrumentation, medical imaging, medical optics, and bioethics. This course is included in three clusters: Biomechanics, Biomedical Engineering, and General Science. *(Fall)* **Strongly recommended for BME majors.**

### For More Information

Please contact Taimi Marple in the Biomedical Engineering Undergraduate Office (206 Goergen Hall or via email to taimi.marple@rochester.edu) or visit our program website at www.bme.rochester.edu.

### BRAIN AND COGNITIVE SCIENCES

> “. . . know that from nothing else but the brain come joy, delight, laughter, and sport; and sorrow, grief, despondency, and lamentation. And by this, in an especial manner, we acquire wisdom and knowledge.”

—Hippocrates

*“On the Sacred Disease” (fourth century B.C.)*

### Information about the Department

Members of the Department of Brain and Cognitive Sciences study how we see and hear; move, learn, and remember; reason, produce, and understand spoken and signed languages; and how these remarkable capabilities depend upon the workings of the brain. We also study how these abilities develop, and how the brain matures to become able to organize such complex behavior. In order to understand these complex mental functions, we study not only the behaviors themselves but also the neural and computational processes that underlie them. Brain and cognitive sciences is an inherently interdisciplinary field that applies behavioral, neuroscientific, and computational methods to create new knowledge about the mind and brain. Teaching and research in our department reflect this interdisciplinary focus and span a large domain that touches on behavioral, neural, and computational sciences.

The BA and BS programs in the Department of Brain and Cognitive Sciences offer rigorous but accessible natural science concentrations for students interested in the brain and how it enables us to behave the way we do. The programs have two aims: 1) to provide sound intellectual training that will benefit students in a wide range of career paths; and 2) to provide basic disciplinary qualification for students contemplating graduate or professional training in the behavioral and neural sciences. The curricula provide excellent routes to learn the logic and methods of scientific inquiry and to learn how to reason critically; they also provide unique opportunities to engage in research that is at the frontiers of our current knowledge.

The BA curriculum consists of two foundation courses; three core courses built on these foundations; a statistics course; a laboratory methods course; four upper-level electives organized around a theme chosen by each student; and a senior seminar. The BS curriculum includes all of the requirements for the BA degree in BCS and also incorporates foundational and advanced work in allied fields, including biology, computer science, math, music theory, and lin-
guistics. The Honors Program consists of an independent research project leading to a senior thesis, which is presented in the Honors Seminar. For students majoring in other fields, the department offers a minor and a number of clusters (see below) that allow students to study inherently interesting questions such as: How do we recognize sounds and learn our native language? How do we read a book, recognize a face, or reach for a pencil? How do we remember what happened yesterday or during our childhood? How do these remarkable abilities develop? How does the brain become organized to perform tasks that thus far exceed the capacity of modern computers?

Clusters
Clusters are either broad—covering the basics in all parts of the discipline—or deep—focusing on a particular subpart of the domain. The department offers nine clusters: Mind and Brain; Perception and Development; Language and Cognition; Mind, Brain, and Development; Language and Cognitive Development; The Senses; Biology and Behavior; Neurobiology; and Neuropsychology.

Departmental Advice for First-Year Students
Students trying to determine if they’re interested in BCS may begin with BCS 110 (recommended), BCS 111, BCS 172, or BCS 183. Students planning to pursue a BA degree should complete at least the following by the end of their sophomore year: BCS 110, BCS 111, one or more of the 3 core courses (BCS 151, BCS 152, BCS 153), plus STT 212 (statistics), if possible.

Courses
The foundation courses (BCS 110 and 111) are entries into many of the clusters offered by the department, but students can also begin clusters by taking one of the 100-level electives (BCS 172 or 183).

BCS 110 Neural Foundations of Behavior. Introduces the structure and organization of the brain and its role in perception, movement, thinking, and other behavior. Topics include the brain as a special kind of computer, localization of function, effects of brain damage and disorders, differences between human and animal brains, sex differences, perception and control of movement, sleep, regulation of body states and emotions, and development and aging. Prerequisites: none. (Fall and Spring, one of the two foundation courses)

BCS 111 Foundations of Cognitive Science. Introduces the organization of mental processes underlying cognition and behavior. Topics include perception, language processing, learning, and memory. Integrates knowledge of cognition generated from the fields of cognitive psychology, artificial intelligence, neuroscience, linguistics, and philosophy. Prerequisites: none. (Fall and Spring, the second foundation course)

BCS 151 Perception and Action. Explores how the biology of our senses shapes perceptual experiences of reality. Emphasizes sense of sight primarily and hearing secondarily. An important theme is that our sensory systems play a crucial role in the execution of coordinated movements of our bodies as we navigate in and interact with the environment. Prerequisites: BCS 110 or BCS 111 or equivalent background. (Fall, a core course)

BCS 152 Language and Psycholinguistics. An overview of the nature and processing of human languages, including comparisons between language and animal communication systems; the biological bases of human language; and the cognitive mechanisms used in producing, understanding, and learning language. Prerequisites: BCS 110 or BCS 111 or LIN 110. (Fall, a core course)

BCS 153 Cognition. Considers human cognitive processes, including behavioral, computational, and neuroscience methods used to understand the nature of cognition. Explores how we perceive and integrate sensory information to build a coherent perception of the world; how we memorize and retrieve information; and how we reason and solve problems. Prerequisites: BCS 110 required; BCS 111 recommended. (Spring, a core course)

BCS 172 Development of Mind and Brain. Introduces human development, focusing on the ability to perceive objects and sounds, to think and reason, and to learn and remember language and other significant patterned stimulation. Includes the nature and mechanisms of development in humans and an overview of what is known about brain and behavioral development in other species. Prerequisites: none. (Spring)

BCS 183 Animal Minds. Considers the cognitive and communicative abilities of animals, especially primates, as compared with humans. Topics include thinking, reasoning, remembering, communicating, and understanding number, time, and causality, in animals ranging from ants to apes. Prerequisites: none. (Fall)

BCS 185 Social Cognition. Social cognition combines classic social psychology with methods and theories from cognitive psychology and neuroscience to study how people make sense of each other and the social world. We examine how the social environment influences cognitive processes such as attention, heuristics, and appraisals and how these processes in turn affect decisions, behaviors, and health. We critically evaluate research on a variety of topics, such as emotion regulation, stereotyping and prejudice, and stress and decision making. Prerequisite: PSY 101.

For More Information
Please visit the brain and cognitive sciences program website at www.bcs.rochester.edu/.
Information about the Program

The College, in conjunction with the Simon Business School, offers both a BA and a BS in business. These majors build upon a foundation of economics and allow undergraduates to take advantage of the many courses offered by Simon School faculty. The majors are based on principles of statistics and economics and other social sciences to provide students with an understanding of business-related disciplines such as finance, accounting, marketing, analytics, and entrepreneurship. The majors provide an analytical approach for addressing current as well as future opportunities and problems in for-profit and not-for-profit organizations. Students will be well prepared to begin a career in business or to pursue further business-related studies in graduate school. The BS consists of 15 courses and is intended for students interested in studying a business discipline in greater depth. The BA consists of 11 courses, requires students to complete a second major (either a BA, BM, or BS degree), and is designed for those who have a strong interest in another discipline and wish to pursue studies in that discipline as well as in business. Both the BS and the BA satisfy the College’s social science distribution area.

The undergraduate business minor is offered by the Simon Business School for undergraduates in the College. It is aimed at building the student's vision, and relentlessly drive it to completion. "Good business leaders create a vision, articulate the vision, passionately own the vision, and relentlessly drive it to completion."

— Jack Welch

Program Advice for First-Year Students

The business major requires that students satisfactorily complete one year of calculus before declaring the major (MTH 141–143 or MTH 161–162 sequences are acceptable). Students planning to major in business should complete the following courses by the end of their sophomore year: prerequisite calculus sequence, one acceptable statistics course and ECO 108 Principles of Economics.

Students declaring the business minor must complete two prerequisite courses: one acceptable statistics course and either ECO 108 Principles of Economics, or ECO 207 Intermediate Microeconomics. AP credit is acceptable for the math prerequisite, depending on the score obtained. If AP credit is awarded for ECO 108, students must take an additional higher-level economics course.

Courses

**MTH 141–143; Calculus I, II, III.** This sequence covers the material of MTH 161–162 (see below) in three semesters. The same text is used in both 141–143 and 161–162. Placement is made by the Department of Mathematics. (All three offered Fall, Spring, and Summer)

**MTH 161–162; Calculus IA, IIA.** The first semester, MTH161, covers differentiation techniques and applications; the second semester, MTH162, covers integration and applications and additional differentiation techniques. Placement is made by the Department of Mathematics. (Both offered Fall and Spring)

**ECO 108 Principles of Economics.** This course is an introduction to the fundamental concepts of both microeconomic theory (supply and demand, cost and production, prices in markets for individual commodities) and macroeconomic theory (national income, unemployment, and inflation) with applications of theory. It gives a student preparation for subsequent economics courses. (Fall and Spring)

**ECO 207 Intermediate Microeconomics.** This course develops the fundamental building blocks of economic theory, enabling the student to gain an understanding of how economists evaluate economic problems and policies. The focus throughout is on how economic agents make choices and how prices serve as a key mechanism in the allocation of resources. Topics include competition, monopoly, taxes, subsidies, etc. Prerequisites: ECO 108 or equivalent. (Fall and Spring)

**ECO 230 Economic Statistics.** (For equivalent statistics course; see program advice for first-year students.) This course provides an introduction to basic probability and statistical theory for estimation and hypothesis testing with emphasis on issues that arise when dealing with economic data. In the process, data analysis methods through the use of computer software are introduced. (Fall and Spring)

**ACC 201 Financial Accounting.** This course is an introduction to the principles and procedures used by organizations to record economic transactions that affect them and to report the net effect of these transactions to interested external parties. The course covers the judgment inherent in certain aspects of the recording and reporting process, the acceptable alternatives for recording given transactions, and the effect these judgments and alternatives have on comparisons of the financial reports for different organizations, and on the usefulness of financial reports in general. In conjunction with this, consideration is given to the failure of financial reports to fully incorporate the economic condition of an organization and the reason for this. (Fall and Spring)
CHEMICAL ENGINEERING

And in the future, even more than in the present, will the secrets of power be in his keeping, and more and more will be a leader and benefactor of men. That his place in the esteem of his fellows and of the world will keep pace with his growing capacity and widening achievement is as certain as that effect will follow cause.” —Robert Moore

Information about the Department

Chemical engineers apply their fundamental knowledge of the chemical and physical sciences to the solution of engineering problems that are of interest to society. They find employment in various modern industries, including microelectronics processing, biotechnology, and chemical manufacturing facilities. They may also use their engineering backgrounds as a starting point for a wide variety of other occupations, including law and medicine. For example, chemical engineers often enter the field of patent law, where their technical background can be put to useful effect, and their training in the chemical and physical sciences is invaluable for pursuing careers in medicine and/or biomedical research.

The Bachelor of Science degree in chemical engineering prepares graduates for immediately useful and rewarding industrial positions. Currently about 50 to 60 percent of chemical engineering graduates follow this route. The others elect to obtain professional training in an allied field such as law or business or choose to go on to a doctorate degree before embarking upon industrial research or academic employment. An increasing number of students are choosing to remain at the University for a fifth year of study, either to broaden their education through the University’s Take Five Scholars program or to earn an MS degree. Even those who enter the workforce upon graduation eventually continue their education. Most acquire further training at the Master of Science level on a part-time basis, often through an employer-sponsored tuition benefits program.

Departmental Advice for First-Year Students

Chemical engineers need a strong foundation in chemistry, physics, and mathematics. Moreover, because the solutions to society’s problems frequently involve questions that transcend technical considerations, the curriculum includes a balance of humanities and social science courses as well.

Courses

CHE 150/EAS 102 Green Energy. This course provides an introduction to basic chemical engineering concepts and focuses on renewable energy production, conversion, and utilization. Fundamental topics include energy and power metrics, material and energy balances and the fundamental laws of thermodynamics. The second half of the course focuses on traditional and alternative energy sources, energy distribution, and energy utilization. Course activities include in-class demonstrations, homework assignments,
The Department of Chemistry offers both BA and BS degrees. The BS degree is intended for students who want to specialize in chemistry. Both the BA and BS chemistry degrees require only two courses in physics, Physics 121–122, or 113–114. However, chemistry majors pursuing a BS degree are strongly encouraged to take the Physics 121–123 sequence and begin during the spring semester of the first year. All chemistry majors should continue with their mathematics sequence in the spring semester.

CHM 131 Chemical Concepts, Systems, and Practices I.
This course serves as an introduction to the concepts of chemistry for science and health professions students and as a science course for students of the humanities and social sciences. Properties of chemical systems are discussed from a macroscopic and molecular perspective, with examples developed from a theme of energy and the environment. Topics include stoichiometry, atoms and molecules, properties of gases, thermochemistry, chemical equilibrium, acids and bases, solubility equilibria, and oxidation-reduction reactions. These topics are discussed in the context of the following energy and environment-related issues: elemental resources of our planet, energy production and utilization, what makes a good fuel, and aqueous resources. There are three 50-minute (M, W, F) or two 75-minute (T, R) lectures per week. In addition, there is a three-hour laboratory in alternate weeks, a 50-minute laboratory lecture, and a 75-minute workshop. Students register for the lecture, one of the two lab lectures, and a laboratory section prior to the start of the semester. Workshop sections are assigned in the main lecture during the first week of classes. Exams: three exams and a final. (Fall)

CHM 132 Chemical Concepts, Systems, and Practices II.
A continuation of Chemical Concepts, Systems, and Practices I, emphasizing energy and the environment. Topics include chemical exams, and a project. This course is included in two clusters: Energy and Sustainability, and Green Engineering. (Fall)

For More Information
Please visit the chemical engineering program website at www.che.rochester.edu/.

International Baccalaureate (IB)
Chemistry—Students who receive a higher-level exam score of 6 or better are awarded credit for CHM 131 and are eligible to apply for admission to enroll in CHM 171. No credit is granted for subsidiary exams. Students with an IB score of 6 or higher have the same options as described for students with an AP score of 4 or 5.

Courses
The chemistry department offers three courses for first-year students during the first semester: CHM 131, CHM 137, and CHM 171. CHM 131 is part one of a two-semester sequence in general chemistry. Two sections of CHM 131 are offered in the fall, and both sections are of comparable difficulty and cover the same general topics. CHM 171 is an honors course on organic chemistry that is available to students with AP scores of 4 or 5 or IB score of 6 or higher. CHM 131 and CHM 171 are appropriate for students majoring in chemistry or related sciences. CHM 137 is a one-semester introduction to general chemistry specifically for engineering students. Students should select the course that most closely supports their particular interests.

Students may accept the credit and apply for admission to enroll in the chemistry course on organic chemistry (CHM 171); they may accept the credit and not take chemistry in the fall semester, with subsequent enrollment in CHM 132 in the spring semester; or they may waive this credit and enroll in CHM 131. The department expects that some students will select each of these options, depending on their preparation in chemistry and their future interests.

Departmental Advice for First-Year Students
A typical first-semester BA or BS program consists of CHM 131 or CHM 171, depending on the student's interest and preparation; MTH 161, with advice from the mathematics department; a writing course as recommended by the College Writing Program; and an elective from a chosen cluster. Students anticipating a major in chemistry are encouraged to meet with a faculty advisor from the department during the first year year in order to explore the individual student's needs and tactics for preparation for a possible major in chemistry.

Advanced Placement (AP)
Students who have received a score of 4 or 5 on the AP exam are entitled to credit for CHM 131 and have several options available.
kinetics, electrochemistry, thermodynamics, properties of atoms, atomic structure, and chemical bonding. These topics are discussed from the perspective of the efficiency of energy utilization; what makes processes spontaneous; the kinetics of ozone depletion; and how energy is extracted from nuclei, atoms, and molecules. There are three 50-minute (M, W, F) or two 75-minute (T, R) lectures per week. In addition, there is a three-hour laboratory each week, a 50-minute laboratory lecture, and a 50-minute workshop. Students register for the lecture, one of the two lab lectures, and a laboratory section prior to the start of the semester. Workshop sections are assigned in the main lecture during the first week of classes. Exams: three exams and a final. Prerequisite: CHM 131. (Spring)

CHM 137 Chemical Principles for Engineers. This course is a one-semester introduction to general chemistry for engineering students. The course discusses the microscopic and macroscopic basis for chemical structure and reactivity. In addition to lectures, there are weekly 75-minute workshops. A 75-minute lab lecture and three-hour laboratory are also held every other week. Students register for the lecture, one of the two lab lectures, and a laboratory section prior to the start of the semester. Workshop sections are assigned in the main lecture during the first week of classes. (Fall)

CHM 171/173 and 172/210 Freshman Organic Chemistry. These courses constitute a one-year exploration of the basic observations, concepts, and practice of organic chemistry, with a focus on the fundamental relationships among molecular structure and chemical reactivity. The exploration requires that students grapple with defining questions, evaluating evidence, weighing arguments, reflecting on epistemological issues, constructing new experiments, etc. The study of organic chemistry is carefully integrated with a review of the key concepts from general chemistry. Honors Organic Chemistry is designed for first-year students with good preparation in chemistry (e.g., two years of general chemistry and AP score of 4 or 5, or equivalent preparation). Please note: CHM 171 (Fall) and 172 (Spring) are each four-credit courses that individually meet for three separate lectures and one two-hour workshop each week. CHM 173 (Fall) meets for one lab afternoon per week (1 credit). CHM 172 has a required companion lab, CHM 210 (2 credits) (Spring). This sequence will meet all of the requirements for a year of organic chemistry with lab and prepares students to enter upper-level chemistry courses.

Course Placement Methods
Students interested in chemistry who do not have AP credit should select CHM 131. Students who have received a 4 or 5 on the AP exam are entitled to credit for CHM 131 and have several options available. Students may accept the credit and not take chemistry in the fall semester, with subsequent enrollment in CHM 132 in the spring semester, or they may waive this credit and enroll in CHM 131. The department expects that some students will select both of these options, depending on their preparation in chemistry and their future interests.

For More Information
Please visit the chemistry program website at www.chem.rochester.edu or contact Deb Contestabile, undergraduate program coordinator, Department of Chemistry, Hutchison Hall 404D, (585) 276-3663, or email ugradadm@chem.rochester.edu.

CLASSICS

“I would make all learn English: and then I would let the clever ones learn Latin as an honour, and Greek as a treat.”
—Winston Churchill

“To read the Latin and Greek authors in their original is a sublime luxury . . . I thank on my knees him who directed my early education for having in my possession this rich source of delight.”
—Thomas Jefferson

The ancient civilizations of Greece and Rome have influenced all successive western societies, leaving a legacy that includes ideas about democracy, empire, myth, society, race, gender, and philosophy. At the University of Rochester, the study of ancient Greece and Rome is not merely a matter of antiquarian interest; rather, our courses enable students to explore the past in ways that allow them to understand the present and imagine the future. Students study the foundational texts and significant artifacts of the western world in order to understand them on their own terms and in their ancient contexts as well as to develop a deeper awareness of the ways in which classical antiquity has shaped and continues to influence contemporary society.

Students can approach the study of the ancient world in a range of ways; some students focus on the history, culture, and archaeology of Greece and Rome, while others concentrate on the study of languages and literature; and, of course, many students do both. Therefore, in addition to developing a solid foundation in Greek and Latin language, students may select from courses in ancient drama, mythology, and poetry as well as from courses that focus on ancient Greek and Roman religion, philosophy, and culture. The department also offers courses on more specific topics such as the ancient city; Greek and Roman ideas about race and ethnicity; issues related to gender, sexuality, and family life; specific mythological or historical figures such as Hercules or Alexander the Great; and even on ancient techniques of engineering.

The classics program offers several study abroad courses, led by Rochester faculty, in which students can participate (one does not need to be a classics major to participate in these programs):

- **Archaeological Dig in Italy (summer)**: Every summer, the classics department runs an archaeological dig in Italy in which students not only learn about ancient Roman history and
material culture but also develop their skills in field methods of archaeology.

- **Epigraphy in Rome (spring break):** The department also offers a spring break program in which students study Latin inscriptions and graffiti in Rome.
- **Sacred Spaces in Greece (winter break):** The department offers a course, Sacred Spaces in Greece, that culminates with a two-week trip to Greece so that students can visit sites they have studied and present their research on location.

In addition to the major concentration in classics, the department offers minors in classical civilization, Greek, and Latin. Recent graduates of the department have an excellent record of admission to graduate school as well as to medical school or law school. The classics program is housed in the Department of Religion and Classics.

### Advice for First-Year Students

For students who want to focus on the study of the history, culture, and literature of ancient Greece and Rome, we suggest that you begin with the 100-level course that is of interest to you. For students who want to begin with the study of Greek and Latin language, Greek 101 and Latin 101 assume no previous knowledge and are intended for students with little to no experience of the language. Students who are considering entering the sequence at a higher level than 101 in Greek or Latin are strongly encouraged to consult with Professor Nicholas Gresens (nicholas.gresens@rochester.edu) as soon as possible. Students are not permitted to register for or receive credit for a language course if they have already achieved proficiency at the level of that course.

### Advanced Placement (AP)

A score of 4 or 5 on the Latin examination will earn credit for LAT 103. Students who complete a second Latin AP examination with a score of 4 or 5 may earn credit for LAT 208 upon completion of a Latin course numbered 103 or above with a minimum grade of "B."

**International Baccalaureate (IB)**

Latin—Students who receive a score of 5 or above on the higher-level exam are awarded credit for LAT 102.

### Courses

#### Fall Semester

**Classics**

**CLA 115 Roman World.** An examination of the history of Rome. Over the course of a few hundred years, Rome grew from a small village into the capital city of one of the world’s greatest empires. How did a small town in central Italy succeed in imposing its government and cultural values throughout the Mediterranean world and beyond? Why did the Roman political and cultural system ultimately fail? Why do ancient Roman values and accomplishments still resonate with us so much today?

**CLA 151 Democracy.** The term “democracy” may be easy to define, but it is much harder to determine what democracy looks like and how it is even able to function. In this course, we examine the first democracy—that of ancient Athens—which ran from roughly the end of the sixth century (with the reforms of Cleisthenes) to the second half of the fourth century (with the subjugation of the Greek mainland to the Macedonians). We explore the historical and social factors that helped it come into being, the various institutions that made Athenian society function democratically, and what the Athenians thought about their great experiment. Through this exploration, we—perhaps—come to better understand our modern world and our own system of government, which does not shy away from embracing the term—if not necessarily all the ideals of—democracy.

**CLA 134 Alexander the Great.** This course provides both a survey of the career of Alexander the Great and an introduction to the historiographical traditions (ancient and modern) that shape our understanding of his legacy. We focus primarily on two clusters of problems. First, we examine what Alexander’s career can tell us about the dynamics of ancient empires. Second, we grapple with the interpretative challenges generated by our sources, which consist largely of literary accounts produced by authors who wrote long after Alexander’s own lifetime and who relied on earlier texts that no longer survive. All sources are read in English translation.

**CLA 140 Classical and Scriptural Background.** Homer, Virgil, and Ovid. Greek tragedy and comedy: Aeschylus, Sophocles, Euripides, and Aristophanes. The Hebrew Bible—Abraham and Isaac, Moses and Pharaoh, Esther and Judith—and Christianity’s New Testament. The two great traditions studied in this introductory course—classical and Biblical—have been pondered by generations of writers and artists for thousands of years. A great deal of literary history is the story of intricately rewriting and adapting the core texts of these traditions; it has been said that the European philosophical tradition is a series of footnotes to Plato. While doing justice to any of these authors or traditions in a single semester would be a challenge, the goal of this class is to read as much as possible of the classical and scriptural tradition in the short time we have, giving you a solid introduction to some of the key stories and ideas that have generated so much thought, conflict, and human creativity over the past two dozen centuries. First-year students welcome.

**Greek**

**CGR 101 New Testament and Classical Greek I.** This course provides an introduction to ancient Greek, the language used by classical Attic authors as well as the writers of the New Testament and other early Christian texts.

**CGR 103 Intermediate Greek.** This course offers an intensive review of Greek grammar combined with readings in Greek prose in order to strengthen students’ knowledge of classical Greek and improve translation skills. We translate and discuss Xenophon’s Memorabilia, a dialogue about Socrates.

**Latin**

**LAT 102 Elementary Latin II.** This course completes Latin 101’s introduction to Latin grammar and introduces the reading of continuous Latin prose.
Spring Semester

**CLA 220 Classical Archaeology.** Greek art and archaeology. This course examines the physical remains of ancient Greek civilization, with an emphasis on architecture, sculpture, painting, and other visual arts in order to understand Greek culture and society.

**CLA 135 Classical Mythology.** Introduction to the mythology of the classical world. We examine the major myths about the gods, the origins and nature of the universe, and the heroic past as they developed in the Greek world and as they were adapted in the Roman world. We consider the nature and function of myth in society, some theoretical approaches to myth, and the way in which myths were adapted by Greek and Roman authors to fit a particular literary or historical context. This course also devotes time to comparing the classical system of myths to other mythological systems.

**LAT 101 Elementary Latin I.** An introduction to the Latin language based on the ancient authors and designed to prepare students for the reading of classical and medieval texts.

**LAT 103 Intermediate Latin.** This course, the third in the introductory sequence, consists of readings from a selection of Latin prose and poetry with accompanying grammar review.

For More Information

Please visit the religion and classics program website at www.rochester.edu/college/rel/.

---

**COMPUTER SCIENCE**

"Computer science is no more about computers than astronomy is about telescopes."

—Edsger Dijkstra

**Information about the Department**

The Department of Computer Science (CSC) at the University of Rochester is well known for its research production and collegial atmosphere. Degrees offered include an elite undergraduate major and an intense program leading to the doctor of philosophy. Particular emphasis is placed on computer vision and robotics, human computer interaction, natural language understanding and knowledge representation, machine learning, systems and architecture, data analytics, and theory of computation.

**Departmental Advice for First-Year Students**

Students have the option of completing a BS, a BA, or a minor in computer science. Many students in other fields also find courses in computing both interesting and useful. Those who major in the humanities and social sciences may choose to take a cluster in CSC. Of the two bachelor's degrees, the BS requires a larger number of upper-level courses in computer science and is appropriate for students who aspire to achieve a high-level research and development position in the computer industry, those who plan to go on to earn an MS or PhD, or those who simply wish to have the broadest and deepest knowledge of the field. The BA curriculum is highly flexible and can be customized to support students interested in the intersection of computer science with other disciplines, such as computational linguistics, studio arts, computational biology, digital media, etc. The typical entry point for the BS program is CSC 171. The typical entry point for the BA is CSC 161. First-year students planning to complete the BS should also register for MTH 150 in the fall; many BA students choose to do so as well. Other courses available to first-year students (CSC 170 or CSC 175 series) stress creativity and problem solving with no prerequisites. A placement exam will be given during Orientation for students who wish to test up to CSC 172 without taking AP Computer Science.
Advanced Placement (AP)
Students who have passed the AP Computer Science test with a 4 or a 5 may be placed in CSC 172. Credit will be awarded for CSC 171 upon completion of CSC 172 with a grade of B- or better.

International Baccalaureate (IB)
Computer Science—Students who receive a higher-level exam score of 5 or better may be placed in CSC 172. Credit will be awarded for CSC 171 upon completion of CSC 172 with a grade of B- or better.

Clusters
For non-majors, there are five natural science/computer science clusters to choose from.

Courses

**CSC 108 Technical Literacy.** An introduction to computer applications in business and graphic design. Students begin by learning the basics and some advanced functions of Microsoft Word, Excel, and PowerPoint. The class then progresses through the Adobe graphic design applications Photoshop, After Effects, and Flash. In learning these applications, students are introduced to topics such as computer graphics, file compression, and animation. Not open to officially declared CSC majors. (Fall and Spring)

**CSC 161 Introduction to Programming.** Hands-on introduction to programming using the Python programming language. Covers basic programming constructs, including statements, expressions, variables, conditionals, iteration, and functions, as well as object-oriented programming and graphics. Recommended for non-majors and students with less math and science background. Lab and workshop required. (Fall and Spring)

**CSC 170 Web Design and Development.** An introduction to Internet and web technologies. Topics include Internet transport protocols, HTML5 and CSS3, web page design, and website publishing. Emphasis is on fundamentals, design concepts, and industry standards. Additional topics include website construction techniques, mobile design issues, and Search Engine Optimization (SEO). Programming with JavaScript is introduced. (Fall and Spring)

**CSC 171 Introduction to Computer Science.** Hands-on introduction to programming using the Java programming language. Teaches fundamentals of programming and more advanced topics. Emphasizes algorithmic thinking and computational problem solving and provides an introduction to the concepts and methods used in computer science. Required for all CSC majors. Lab and workshop required. This is the first course in the premajor sequence for the BS. (Fall and Spring)

**CSC 172 Data Structures and Algorithms.** Abstract data types (e.g., sets, mappings, and graphs) and their implementation as concrete data structures in Java. Analysis of the running times of programs operating on such data structures and basic techniques for program design, analysis, and proof of correctness (e.g., induction and recursion). Small-group problem-solving workshops are an integral part of this course. Lab and workshop required. Prerequisites: CSC 171 or equivalent, MTH 150. (Fall and Spring)

**CSC 173 Computation and Formal Systems.** Investigation of several formal systems influential in computer science and also some of their applications (e.g., inspiring and providing the foundation for a computer programming style or providing the basis for solving important practical problems like communications protocols, compiling, systems analysis, graphics, and more). Prerequisite: CSC 172. (Fall and Spring)

**CSC 175 Creative Computing.** Quick! How much would a tunnel under Lake Ontario cost? How many people probably touched that orange you just bought at Wegmans? Can the military’s satellites really read your license plate from orbit? Explores the creative use of computational mechanisms and information sources to obtain rough estimates and feasibility analyses for interesting questions and practical problems and looks at the technological basis of the art of measurement. Prerequisites: none.

For More Information
Please visit the computer science program website at www.cs.rochester.edu/ or contact the undergraduate liaison at (585) 275-4505.

DANCE

Information about the Program
The Program of Dance and Movement at the University of Rochester is a unique program that currently offers students a BA in dance with two concentrations, a minor in dance, a minor in movement studies, four options for a cluster, and a wide variety of elective course options. The program is committed to offering experiential and theoretical study of dance and movement that honors and informs the whole person. Coursework emphasizes dance as an art form; creative process; critical thinking, self-awareness, contemplative practice; the nature of community, diversity, and an appreciation of diverse ways of thinking and moving. It explores the use of dance and movement as a means of creative and personal expression; as mindful, physical, and spiritual practice; and as a way of understanding culture, traditions, and philosophies from all over the world.
The BA in dance comprises at least 50 credits, and the dance studies concentration can include up to 12 credits from another discipline to add up to 50 total.

- Creative Expression and Performance: This program is flexible enough that students can choose to focus on Western dance forms such as contemporary modern dance and contemporary ballet, or world dance forms such as those from the African Diaspora that might include West African dance, capoeira, Zimbabwean dance, hip hop, and jazz.

- Dance Studies: This program incorporates two or three courses from virtually any other discipline and interweaves them with studies in dance and/or movement. Students can choose to combine their studies in a second major with the dance studies major in order to explore interdisciplinary applications in the sciences, humanities, and/or other areas.

### Minors
- Dance
- Movement Studies

### Clusters

#### Improvisation and Creative Process (H1DAN006)
This cluster encourages students to discover the potential of their own creativity and offers platforms for developing dances and personal movement vocabularies.

#### Movement and Culture (H1DAN007)
Investigate movement and dance from different communities around the world, both theoretically and experientially, learning to appreciate culture in an embodied manner.

#### Mind-Body/Somatics (H1DAN009)
Study the mind-body-spirit relationship, focusing on finding connections between the inner physical world and the external environment.

#### Dance and Performance (H1DAN010)
Designed for the student interested in the art of dance and performance. Through the study of dance technique and theory as well as the context within which dance exists in the field, students have opportunities to experience, view, and discuss the art of dance, performance, and creative expression.

The program sponsors a guest artist series, which features performances, lecture-demonstrations, and workshops by internationally and nationally acclaimed dance artists and educators who share their passion for the arts with the University and the surrounding community. In addition, an annual inspireDANCE Festival takes place over six days in January or February and features more than 30 open master classes and workshops, a featured concert by a professional dance company, student performances, an inspireJAM bboy and bgirl battle, and a Swing Dance Stomp.

Through study in the Program of Dance and Movement, students will have the potential for participation in and an understanding of a dance-related career including but not limited to performance, teaching, arts management, choreography, dance criticism, creative arts therapies, and dance/movement science. Regardless of a student’s career path, study in our program will help foster educated audiences and participants in the field of dance and movement in culture. Our diverse courses and faculty promote a sense of community within which discussions take place about cultural identity, about gender, about dance as art, about art as a voice and mirror for not only personal expression but also for society, politics, social change, and current issues. Dance appreciation, movement for health, and connectedness of body and mind are at the heart of our purpose in educating students in dance and movement studies as scholarly endeavors.

### Courses

#### DAN 102 Fundamentals of Movement
Explores movement through the use of technique and improvisation. It provides a strong foundation for further study in dance, theater, or sports and heightens body awareness. No previous dance training is required. (Spring)

#### DAN 104 Contact Improvisation I
This course is rooted in dance, the martial arts, and studies of body development and awareness. We explore solo and duet skills such as rolling, falling, balance, counterbalance, jumping, weight sharing, spirals, and attuning to sensory input. No previous dance training required. (Fall)

#### DAN 110 Beginning Dance Techniques (Jazz, Ballet, and Modern)
Serves as an introduction to dance technique, specifically in jazz, ballet, and contemporary modern dance. Emphasis is on the development of basic skills, patterns of body organization, alignment, continuity and connectivity, and rhythmic and bodily awareness. No prior training is necessary or expected. Students who have had prior training will be challenged individually. (Spring)

#### DAN 130 Conditioning for the Dancer/Athlete
Aims to develop and strengthen specific muscular strength as it pertains to physical demands of dancers, athletes, and martial artists as well as those who wish to explore a mindful, physical, and anatomically sound practice. (Fall)

#### DAN 140 Tap Dance Beginning
Development of basic skills, energy, strength, control, continuity, and rhythmic and bodily awareness through the teaching of rhythm tap dance. No previous tap dance experience is expected. (Fall)

#### DAN 145 Beginning Jazz Dance
Vernacular jazz movement as it relates to jazz music and its historical context. (Fall)

#### DAN 150 Beginning Contemporary Dance Technique
Introduces the technique and theory of contemporary modern dance. Dance appreciation, experiential practice and movement observation are the overarching areas of focus in this course. Though this course is taught at the beginning level, students at all levels will be challenged. (Spring)

#### DAN 160 Dance Improvisation
Designed for those with some experience in dance who wish to explore mechanisms for generating movement and dance through improvisation. The course works with theoretical concepts and other cultural forms of performing arts in the pursuit to understand improvisation as practice, technique, performance, and composition. (Spring)
DAN 171 Capoeira: Brazilian Art Movement. An art form of self-defense with strong aerobic and dance elements that brings together a harmony of forces. Through the study of the history, movements, and culture behind Capoeira, students gain self-confidence, power, flexibility, endurance, and, ultimately, the tools toward self-discovery. (Fall and Spring)

DAN 181 West African Dance Forms I. Dynamic dance traditions of Guinea, West Africa. Accompanied by live music, students learn footwork and movements for several rhythms and acquire familiarity with the physical stance common to many styles of West African dance. (Fall)

DAN 188 Hip Hop Culture and Breaking. Provides a look into the historical origins and social importance of hip hop culture. The class format is geared toward physical movement along with lectures, videos, and opportunities to attend events in the community. (Fall)

DAN 209 Qi Gong: Chinese Way to Health. A study of the cultural, lifestyle, and movement aspects of Qi Gong for health and fitness. Qi Gong provides the dancer with training for relaxing the body, breathing, and mind and for awareness and mindfulness as well as for cultivating, harmonizing, and expressing energy. (Fall and Spring)

DAN 245 Dance/Movement Therapy Foundations. Examines the field’s approaches to (1) enhancing personal, professional, and creative development, and (2) treating a wide range of challenges (e.g., autism, anxiety, eating disorders, abuse, developmental challenges, and psychosis). To these ends, students learn how Dance/Movement Therapy integrates natural movement, formal elements of dance, music, language, psychology, counseling, neuroscience, and concepts drawn from Asian approaches to healing. (Fall)

DAN 248 Arts and Activism. Dance is powerful. Art is a tool that inspires social change. This course examines the relationship between social activism and artistic practice, exploring this integration in dance, art, music, and film. (Fall)

DAN 250 Intermediate Contemporary Dance: Context and Practice. Dance appreciation and technical practice. Practice contemporary dance experientially through examining movement principles and exploring choreographic combinations. (Fall)

DAN 290 Middle Eastern Dance: Orientale. Unveil the grace and beauty residing in the creative nature of Middle Eastern dance. Class work includes meditative movement, dance technique, improvisation, and rhythm identification through music and drumming. No prior dance experience necessary. (Fall)

DAN 385 Dance Performance Workshop. Within a choreographic process, students take part in the creation of new work. Experience a rehearsal process from beginning to end, addressing a variety of performance techniques and the unique and personal artistry that is yours alone. Prerequisite: Permission of instructor or by audition on the first day of classes. (Fall)

For More Information
Please visit the dance program website at www.sas.rochester.edu/dan.

DATA SCIENCE

“Information is the oil of the 21st century, and analytics is the combustion engine.”
—Peter Sondergaard, Senior Vice President, Gartner Research

Information about the Program
Data science is an interdisciplinary field about principles and algorithms for extracting knowledge and insights from many kinds of data, including financial data, scientific data, natural language text, and images and video. Students learn to use techniques and theories drawn from mathematics, statistics, and computer science, including machine learning, data mining, inferential statistics, databases, and data visualization. In addition, students delve deeply into an application area where data science can be applied. Application areas include biology, brain and cognitive sciences, computer science, earth and environmental sciences, economics, mathematics, medicine, physics, and political science. During their senior year, students take a capstone course where they work in teams to solve real-world problems with industry mentors.

There is extremely high demand in business, health care, technology, and government for data scientists. The data science BA and BS degrees prepare students for a variety of careers in data analytics and for graduate study in the physical, life, social, or computational sciences.

Program Advice for First-Year Students
Students considering majoring in data science should take discrete mathematics and start a calculus sequence and the introductory computer science sequence as soon as possible. These prerequisite courses must be completed before declaring the major. Application area courses are at the 200-level or above, and some might require additional prerequisite courses that could be taken during the first year.

Advanced Placement (AP)
AP credit can be awarded for CSC 171 and for some of the prerequisite calculus courses. Students who wish to be awarded AP credit must check with the department that parents the course for specific requirements.
Courses

Following are the prerequisite and a selection of introductory courses in the major.

**MTH 150 Discrete Mathematics.** Logic, functions, algorithms, mathematical reasoning, mathematical induction, recurrence relations, techniques of counting, equivalence relations, graphs, trees. *Prerequisite for declaring the major.* (Fall and Spring)

**MTH 161 Calculus I and MTH 162 Calculus II; or MTH 141 Calculus I, MTH 142 Calculus II, and MTH 143 Calculus III; or MTH 171 Honors Calculus I and MTH 172 Honors Calculus II. Prerequisite for declaring the major.* (Fall and Spring)

**CSC 171 The Science of Programming.** Discovering, formulating, and exploiting the structure of problems to aid in their solution by computer. An introduction to algorithmic problem solving and computer programming in Java. Small-group problem-solving workshops and labs are an integral part of the course. *Prerequisite for declaring the major.* (Fall and Spring)

**CSC 172 The Science of Data Structures.** Abstract data types and their implementation as concrete data structures in Java. Analysis of the running times of programs and general techniques for program design and analysis. Small-group problem-solving workshops and labs are an integral part of the course. *Prerequisite for declaring the major.* Prerequisites: CSC 171 and MTH 150. (Fall and Spring)

**DSC 262 Computational Introduction to Statistics.** This course covers foundational concepts in probability and statistical inference using the R programming language. Topics include probability theory, combinatorics, principles of statistical classification, statistical estimation and hypothesis, and statistical models. Prerequisites: MTH 150 and MTH 161 or MTH 171 or MTH 142. (Fall)

**CSC 240 Data Mining.** Fundamental concepts and techniques of data mining, including data attributes, data visualization, data preprocessing, mining frequent patterns, association and correlation, classification methods, and cluster analysis. Advanced topics include outlier detection, stream mining, and social media data mining. Prerequisites: CSC 172 and MTH 161 or MTH 171 or MTH 142 and one of CSC 242, DSC 262, or linear algebra (MTH 165, MTH 235, or MTH 173). (Fall and Spring)

**DIGITAL MEDIA STUDIES**

“It’s technology married with liberal arts, married with the humanities that yields us the results that makes our heart sing.”
—Steve Jobs

Information about the Program

Designed by faculty within Arts, Sciences & Engineering, the new digital media studies major provides students with the skills necessary to critically appraise and actively produce digital media. In a world of ubiquitous computing and constant digital connectivity, digital literacy and the ability to effectively communicate with and design for digital media users are valuable, marketable skills. This major blends theoretical and historical understandings of past and present media with hands-on uses of emerging technologies, programming, and software. The ability to create digital media has become both more pervasive and increasingly inexpensive, but the number of rigorously trained digital media designers and producers falls woefully short of industry needs. This major is designed to supply this demand and prepare students to succeed in one of the biggest professional growth fields around today. A distinctive component of the major is the capstone project in which all students in the major collaborate on the design and production of a form of digital media of their choosing beginning in the spring of their junior year and continuing throughout their senior year. Much of the work in the digital media studies major takes place in Rettner Hall, a brand new facility designed to house the program.

Program Advice for First-Year Students

Students interested in digital media studies are strongly urged to begin core DMS coursework with DMS 101, DMS 102, and/or DMS 103 in the fall and DMS 104 in the spring. Since these courses prepare students for the variety of upper-level courses that make up the major, students are encouraged to complete this core coursework before the end of their sophomore year. Because the major is flexibly designed, however, students can begin taking production courses while they are working on core courses. Thus, in the spring semester a student might take DMS 104 in conjunction with a course on digital art, for example, or one on machines and consciousness. In the sophomore year, students continue the core and production courses, begin advanced-level media history and theory work, and may enroll in the required Digital Applications course.

For More Information

Please visit the data science website www.sas.rochester.edu/dsc/undergraduate/, email the academic program manager at gids-undergrad@rochester.edu, or visit the Multidisciplinary Studies Center in Lattimore 203.
Courses

Core Courses

**DMS 101 Introduction to Digital Media Studies.** In this class we critically think about the creation, production, distribution, consumption, and reception of digital media. Readings and class discussions focus on the theory, history, and practice of digital media and its application in the humanities, social sciences, and our world. Students produce individual research in the form of written responses, as well as collaborative digital projects. The course’s goals are to prepare students to thoughtfully critique our digital world, create scholarly digital projects, and understand the multifaceted importance of media in today’s society. (Fall)

**DMS 102 Introduction to Computing Multimedia.** This course introduces core concepts and techniques of computer programming to prepare students for more advanced topics in manipulation, storage, and transmission of digital media. Students develop an understanding of computer capabilities and the skills required of computer programmers. No previous programming experience is required. (Fall)

**DMS 103 The Essential Digital Media Toolkit.** This course introduces students to current software for creating, editing, and producing core digital media objects: photographs, video, vector images, 3D models, and video games. This fast-paced project-driven course invites experts in the fields of photography, video, graphic design, rapid prototyping, and gaming to share their knowledge and experience. Through finding creative solutions to problems posed by instructors, students manipulate photographs, edit a short video, design graphics, make and modify a 3D model, and create a small interactive videogame environment. The course culminates with students designing digital portfolios of the work they create in this course. (Fall)

**DMS 104 Design in the Digital Age.** Designing digital products and services requires a process of “interaction design,” which is a wholly new discipline that moves beyond previous fads of simply making digital things that look like physical world objects. Since there is no known formula for creating great UI/UX we explore the need to consider interactivity as a design process, moving from initial ethnographic research through ideation and design and the many steps that lead to final delivery and presentation. Mastery of this process prepares DMS students to undertake their senior capstone project as well as effectively develop other creative and entrepreneurial ideas/ventures. (Spring)

Technology/Production Courses

For relevant courses related to technology/production, please see the program website and/or the digital media studies program advisor.

For More Information

Please visit the digital media studies program website at www.rochester.edu/college/dms/.

EARTH AND ENVIRONMENTAL SCIENCES

“Mont Blanc yet gleams on high—the power is there,
The still and solemn power of many sights,
And many sounds, and much of life and death.
In the calm darkness of the moonless nights,
In the lone glare of day, the snows descend!
Upon that Mountain”

—Percy Bysshe Shelley

Information about the Department

The department offers courses leading to degrees in the geological and environmental sciences. In addition, minor programs and a number of clusters allow students in other fields to explore topics such as the formation of the Earth, the evolution of the solar system or past and current changes in the global climate. Undergraduates are strongly encouraged to take part in departmental research activities, and such experience is typically included in upper-level undergraduate courses. Research fields represented include geophysics, geochemistry, structural geology, sedimentology, environmental geology, oceanography and climate science. The department is equipped with several state-of-the-art research laboratories that complement active field-based programs. Undergraduate research provides an excellent opportunity for students to work closely with faculty and graduate students.

The department also considers field experience to be a valuable part of geological training, and field excursions are incorporated into the schedule of several undergraduate courses. Students in EES 101 use the local glacial geology as a guide to recent Earth evolution, whereas students in EES 102 explore the active geological processes that are shaping California. Opportunities for students to be involved with field-based research are also available. Recent examples include involvement of undergraduates in scientific expeditions to the Arctic, Tibet, East Africa, southern Africa, the Andes, and the western United States to study the Earth’s past climate and tectonic processes.

Departmental Advice for First-Year Students

The Department of Earth and Environmental Sciences offers programs leading to a BS or BA degree. The BS programs include geology, environmental science, and geomechanics; BA programs are available in geology and environmental studies.
The BS program in geology is designed to give students a sound preparation for graduate studies and a professional career. It contains a greater proportion of related science courses than the BA program. A typical first semester program for a BS student would be chemistry, geology, calculus, and an elective. A special track within the major enables students to emphasize the relationships between biology and geology.

The BS in environmental science provides a broad basis in the natural sciences and their applications to processes and problems in the environment. This degree is intended for students who are interested in a career in environmental research. Students going through this program will be able either to seek employment directly or to go on to programs that offer advanced degrees in environmental science. A typical first semester program includes calculus, chemistry and/or biology, and an elective.

The BS program in geomechanics is a joint offering of the Department of Earth and Environmental Sciences and the Department of Mechanical Engineering. A student majoring in this program may be well suited for employment or graduate study in areas such as geology, petroleum geology, engineering geology, or geophysics. A typical first semester for a BS student in geomechanics would be calculus, chemistry, geology, and an elective.

The BA program in geology offers students more freedom in selecting courses, especially in the social sciences and humanities, while providing them with the minimum background required for graduate studies. First-year students interested in this program are not required to take certain courses for their first semester, but should take chemistry, geology, and mathematics during the first two years.

The BA in environmental studies combines natural science courses providing a basic understanding of environmental problems and social science courses that bear upon management of these problems. This program is intended for students who are interested in environmental policy and management. Students who complete this program typically go into fields such as environmental law or public policy. Students might take chemistry, calculus, economics, and an elective in the first semester.

The department also offers minors in geology and environmental geology to enable students majoring in other disciplines to develop an understanding of one area of geology.

**Advanced Placement (AP)**
Students who receive a 4 or 5 on the AP Environmental Science exam are awarded credit for EES 103.

**International Baccalaureate (IB)**
Geography—Students who receive a higher-level exam score of 5 or better are awarded credit for EES 101.

### Courses

#### Fall Semester

**EES 100 Introduction to Oceanography.** This class is in basic oceanography. Oceanography is the study of marine systems from a physical, chemical, geological, and biological point of view. In this class, we explore the formation and structure of the oceanic basins, the geochemistry of seawater and sediments, the ocean circulation patterns, and the composition and distribution of biological populations as a function of different physical and chemical variables. At the end of the semester, we discuss some special topics, such as global warming and ocean acidification, overfishing, and coastal pollution.

**EES 101 Introduction to Geological Sciences.** This introductory geology class provides a broad overview of earth sciences, from planetary evolution to the interplay of geology and climate. The course is a prerequisite for all undergraduate majors who are considering careers in the earth and environmental sciences, while also satisfying science requirements for other undergraduate majors. We introduce the class with the unifying framework for earth science: plate tectonics. Throughout the semester, we look at the physical interactions between different realms on Earth, including the interior (core and mantle), the outer shell (termed lithosphere), oceans, and the atmosphere. We explore the dynamic processes operating on Earth and how these processes have been recorded and have varied over the geologic history. During the last third of the semester, we discuss geologic problems that have a particular relevance to humans, such as energy and mineral resources, water resources, climate, and global change. Students are required to enroll in a lab section and are required to attend one field trip.

#### Spring Semester

**EES 103 Introduction to Environmental Science.** An introduction to the natural, physical, chemical, biological, and geological processes that shape conditions at the Earth's surface; their interrelationships; and the modification of these processes by human activity. Students learn to critically analyze scientific hypotheses and the data on which they are founded and to understand economic and policy strategies that can be implemented to reduce environmental damage. The content of this course is similar to that of the AP environmental science curriculum. This course may be used as an introductory core requirement for the environmental studies or science majors.

**EES 201 Evolution of the Earth.** Historical geology encompasses the 1) dynamic history of the physical earth: the development of landforms, rise and fall of ancient seas, movements of continents, etc., and 2) the evolution of historical geology, such as paleontology, sedimentology, stratigraphy, geochronology, and plate tectonics; and a chronological survey of earth and life history, emphasizing the evolution of North America.

**For More Information**
Please visit the Earth and environmental sciences program website at www.ees.rochester.edu/.

*Courses that are part of clusters offered by the Department of Earth and Environmental Sciences.*
EAST ASIAN STUDIES

Information about the Program

The East Asian studies major is an interdisciplinary approach to the languages, deep history, and uncommonly rich culture of this increasingly important part of the world. Students in this major study Chinese, Japanese, or Korean for at least two full years, and they must take classes in at least three—departments in order to achieve a broad and deep understanding of East Asia.

Students who complete the major in East Asian Studies will have a broad knowledge of the major historic developments, cultures, literary and artistic expressions, philosophies, religions, and economies and politics of the region. They will be able to synthesize their knowledge of the region across disciplinary perspectives, and they will have an intermediate-level proficiency in either Chinese, Japanese, or Korean.

Program Advice for First-Year Students

Students begin their study of East Asia by taking three introductory courses, arranged historically, on the literature, history, religions, visual culture, and other foundational aspects of the region. They also are encouraged to begin their prerequisite language studies.

Courses

Fall Semester

Prerequisite Language Courses

CHI 101 Elementary Chinese I. Students must register for both lecture and recitation. This course is designed for beginners of Chinese. It introduces students to the sounds, basic sentence structures, and the writing system of Mandarin Chinese. Pinyin, the phonetic translation system, is taught and required throughout the course. Emphasis is on developing listening and speaking skills as well as building a vocabulary based on 400 ideographic characters. (6 credits)

JPN 101 Elementary Japanese I. Students must register for both lecture and recitation. Designed to help beginners acquire a basic command of modern Japanese. The classes are conducted in English for the grammar lecture, the recitation in Japanese. In the beginning, students master Hiragana and Katakana writing systems. As the course progresses Kanji Chinese characters are also introduced. Classes emphasize reading, writing, listening, and speaking. Requirements include regular assignments, quizzes, lesson tests, and final exam. Textbooks: 1) Genki I: An Integrated Course in Elementary Japanese by Eri Banno Yutaka Ohno, et.al. (the Japan Times) and 2) Course Workbook by Shino. (6 credits)

KOR 101 Elementary Korean I. Students must register for both lecture and recitation. This course is designed for students who have no or limited background in Korean. It introduces students to the sounds, basic sentence structures, and the writing system of Korean. Emphasis is on developing listening and speaking skills as well as building vocabulary. Cultural aspects of the language are also focused on enhancing students' understanding of the language. (4 credits)

Foundational Survey Courses

HIS 143 Modern China, 1600–Present. This class covers the search for modern China in the 20th century. We trace how China, between invasion, war, and revolution, transformed from an empire to a republic, from republic to Communist state, and from Communist state to the economic powerhouse that it is today.

Note: The following course may have appropriate content but has not been officially approved for the EST program. Please see one of the EST faculty advisors for approval.

REL 175 Religion and Chinese Society. This course examines the complicated relationship between religion and society in China. It takes a sociological approach, emphasizing that religion should be studied as a social phenomena that closely interacts with the development of society at large. The focus is on contemporary times from the end of the 19th century through present. During this period of time, China experienced tremendous change. This course introduces how such change impacted and was expressed through religion, religiosity, and religious politics.

Spring Semester

Prerequisite Language Courses

CHI 102 Elementary Chinese II. Students must register for both lecture and recitation. This course is the continuation of Chinese 101. Knowledge of Pinyin is required. The focus continues to be on developing listening and speaking skills with an increasing emphasis on reading and writing in ideographic characters. It aims to build a vocabulary based on 500 characters. (6 credits)

JPN 102 Elementary Japanese II. Students must register for both lecture and recitation. Sequel to JPN 101. Lecture and recitation designed to help the students at the late beginning level acquire a practical command of modern Japanese in all areas. Although the main emphasis is still on speaking and listening, students have more opportunities for writing than in JPN 101. The classes are conducted
in both Japanese and English. The students master, among other things, keigo (polite language), female versus male speech style, and “direct” style verbals. Textbooks: 1) Genki I: An Integrated Course in Elementary Japanese by Eri Banno Yutaka Ohno, et.al. (the Japan Times) and 2) Course Workbook by Shino. (6 credits)

KOR 102 Elementary Korean II. Students must register for both lecture and recitation. This course is the continuation of KOR 101. This course offers students the opportunity to expand their vocabulary and to improve further conversational and grammatical skills beyond those learned in KOR 101. Focus is on developing listening and speaking skills for everyday personal communication and developing sociocultural knowledge for interactional competence in Korean. (4 credits)

Note: The following course may have appropriate content but has not been officially approved for the EST program. Please see one of the EST faculty advisors for approval.

REL 176 The Tao: From Daodejing to Star Wars. This course investigates the concept of Dao (Tao) in Chinese religious and philosophical traditions as well as its adoption in the West.

For More Information
Please visit the East Asian studies program website at www.rochester.edu/college/msc/east-asian.html.

ECONOMICS

"It is not from the benevolence of the butcher, the brewer, or the baker that we expect our dinner but from their regard to their own interest."
—Adam Smith

Information about the Department
The undergraduate program emphasizes the understanding of modern tools of economic analysis and their application to contemporary policy issues. Those concentrating in economics have the opportunity to pursue a BA degree in economics or financial economics. Students seeking more rigorous training have the opportunity to pursue an honors degree in economics. Graduates are prepared for positions in business and government; for professional schools of business administration, including the 3-2 MBA program with the William E. Simon Graduate School of Business Administration; for graduate work in economics or public policy; for law school; and for PhD programs in economics.

Departmental Advice for First-Year Students
Students planning to major in economics should complete at least three of the following courses by the end of their sophomore year: ECO 108; ECO 207 or ECO 207H; ECO 209 or ECO 209H; a semester of statistics (ECO 230 is recommended; STT 213 or MTH 203 is acceptable). By the end of your sophomore year, you should complete at least one semester of the calculus sequence. One year of calculus is required to major in economics (161–162 is preferred; 141–143 is acceptable).

Advanced Placement (AP)
Students who have received a score of 4 or 5 on the AP exam in Microeconomics and a 3, 4, or 5 on the Macroeconomics examination will be given credit for ECO 108.

International Baccalaureate (IB)
Economics—Students who receive a higher-level exam score of 4 are placed into ECO 207. No credit is awarded. Students who receive a score of 5 or better on a higher-level exam are placed into ECO 207 and awarded credit for ECO 108. No credit is granted for subsidiary-level exams.

Clusters
The department offers clusters in a number of areas of economics, including macroeconomics, applied economics, and theoretical economics. For most students, ECO 108 is a required course for a cluster.

Courses

ECO 108 Principles of Economics. This course is an introduction to the fundamental concepts of both microeconomic theory (supply and demand, cost and production, prices in markets for individual commodities) and macroeconomic theory (national income, unemployment, and inflation), with applications of theory. It gives a student preparation for subsequent economics courses. This course is required for an economics concentration and for all economics clusters. (Fall and Spring)

ECO 207 Intermediate Microeconomics. This course develops the fundamental building blocks of economic theory, enabling the student to gain an understanding of how economists evaluate economic problems and policies. The focus throughout is on how economic agents make choices and how prices serve as a key mechanism in the allocation of resources. Topics covered include competition, monopoly, taxes, subsidies, etc. Prerequisites: ECO 108 or equivalent. This course is required for an economics concentration and all clusters. (Fall and Spring)
ECO 207H Honors Intermediate Microeconomics. Rigorous treatment of ECO 207 for students pursuing the honors degree and valuable for those students considering pursuing a PhD in economics. Prerequisites: one semester of calculus, excellent performance in ECO 108 or equivalent, instructor’s permission. (Spring)

ECO 230 Economic Statistics. This course provides an introduction to basic probability and statistical theory for estimation and hypothesis testing, with emphasis on issues that arise when dealing with economic data. In the process, data analysis methods through the use of computer software are introduced. This course fulfills the statistics requirement for economics majors and should be completed by the sophomore year. (Fall and Spring)

For More Information
Please visit the economics program website at www.econ.rochester.edu/.

ELECTRICAL AND COMPUTER ENGINEERING

“Few things are impossible to diligence and skill.”
—Samuel Johnson

Information about the Department
The Department of Electrical and Computer Engineering is home to programs making significant contributions to fields as diverse as health, energy, national security, information management, and even entertainment. In addition to their academic studies, students also have many opportunities to participate in department research programs as well as student-run projects such as the Solar Splash and Mini Baja teams.

Departmental Advice for First-Year Students
The electrical and computer engineering curriculum is based upon a foundation of mathematics and the physical sciences with a total of five mathematics and three physical science courses required. Our department’s curriculum provides a broad education in the basics of electrical and computer engineering as well as in-depth studies and design experiences in one or more areas such as signals and communications, computer architecture, or electronics and integrated circuit design. Thus, after completing the baccalaureate degree, our graduates are prepared to enter the ECE profession directly or to pursue further study at the graduate level. The flexibility in the program also offers students the opportunity to prepare for careers in law, business, or medicine and other alternative career paths.

Entering students with an interest in pursuing the ECE program are assigned faculty advisors to help with academic program planning throughout their four years of studies.

Courses

EAS 108/ECE 101 Introduction to Electrical and Computer Engineering. A general, high-level understanding of workings of modern computing systems from circuit to computing system architecture to programming, ECE101 is not a required course. Lecture materials are covered eventually in subsequent courses. It is intended to introduce you to (a subset of) principle topics in computer system designs. There is an emphasis on hands-on experience to give you a “feel” for the materials that are discussed in more depth later on.
“The opportunities of man are limited only by his imagination. But so few have imagination that there are ten thousand fiddlers to one composer.”

—Charles F. Kettering

Information for Interested Students

At its core, engineering is about deconstructing a problem, designing a solution, and tinkering with your solution until you have reached a desired outcome. Students taking courses at the Hajim School of Engineering & Applied Sciences are challenged to nurture their ingenuity and become technologically savvy problem solvers and graduate well prepared for advanced studies as well as professional employment.

In her 2016 investiture remarks, Dean Wendi Heinzelman asserted, “I believe that all educated citizens in the 21st century, regardless of major or intended career, need to have an understanding of technology, of data analysis, system design, and computer systems. . . . I am also a strong believer in the benefits of cross-disciplinary thinking. The disciplines outside of engineering, in particular the humanities and social sciences, have a lot to teach us about critical discourse.” Although she was talking about her vision for the Hajim School, she could have just as easily been talking about the benefits of a bachelor of arts degree in engineering science, which provides students with a multidisciplinary major that emphasizes understanding and application of engineering and scientific and mathematical principles. Students majoring in engineering science achieve depth and breadth in the field and are able to function across disciplines as a result of the clusters they complete in both the humanities and social sciences divisions of the Rochester Curriculum.

Advice for First-Year Students

Our introductory courses, EAS 10x, are accessible to engineering majors and non-majors alike. These courses focus on the fun side of engineering, from building bridges to making more-energy-efficient devices. While completion of at least one EAS 10x course is required for most majors in the Hajim School, the engineering science major offers considerable flexibility and permits students to develop individual plans of study to meet their own educational goals.

In addition to taking core courses in mathematics, physics, chemistry, and computer science, students study thermodynamics, fluid dynamics, optics, mechanics, signals, and circuits. Their curriculum is rounded out with four upper-level Hajim School courses of their choosing, and one cluster in each of the humanities and social sciences divisions of the Rochester Curriculum. Careers in patent law, technical writing, science consulting, and technical sales as well as science and engineering education are possible career outcomes.

Courses

EAS 101/BME 101 Introduction to Biomedical Engineering. Students receive an overview of the multidisciplinary field of biomedical engineering, including application of elementary engineering principles to the analyses of physiological systems. By learning about topics such as biomechanics, cell and tissue engineering, biosignals, biosystems, bioinstrumentation, medical imaging, medical optics, and bioethics, first-year students will see the crucial role engineers play in the development of medical machinery. This course includes a weekly laboratory and an introduction to the use of computers as tools for solving engineering problems. (Fall)

EAS 102/CHE 150 Green Energy. First-year students enrolled in this course study the issues of energy production, conversion, and utilization. The first half of the course covers energy and power metrics, material and energy balances, and the fundamental laws of thermodynamics. The remainder of the course examines traditional and alternative energy sources, energy distribution, and energy utilization. Course activities include weekly homework assignments, exams, and a project. Emphasis is on assumption-based problem solving. (Fall)

EAS 103/AME 140 Introduction to Audio Music and Engineering. The course provides an introduction to the science and technology of audio. Students learn about the vibration of strings, musical tuning systems, overtones and timbre, and modes of oscillation through the concept of a guitar. Fourier analysis, transducers, and passive electrical components and circuits are introduced when discussing amps and audio components. Hands-on projects introduce the fundamental concepts of electronics, including voltage, current, resistance and impedance, basic circuit analysis, ac circuits, impedance matching, and analog signals. The course then introduces basic digital signal processing concepts, where they use Arduinos and Pure Data to learn about conversion of sound to digital format, frequency analysis, digital filtering and signal processing, and musical sound synthesis.

EAS 104/ME 104 The Engineering of Bridges. This course is an introduction to the art of bridge building based on the study of the engineering and technological problems involved in the design, construction, and collapse of bridges from antiquity to the present time.
By studying several case studies of major historical bridges selected for their structural significance, students learn how to calculate the forces acting on structural elements, how these forces depend on the bridge structural form, how the form itself is conditioned by the structural materials, and how forces are measured with electromechanical instrumentation. The study includes fundamental notions of mechanics, strength of materials, structural behavior, instrumentation failure analysis, and design optimization. Working in teams, students use constructive experimental models as well as computer-aided programs to design, build, instrument, and test realistic bridge projects. (Fall)

EAS 105/OPT 101 Introduction to Optics. Starting with a discussion of the properties of light (refraction, imaging, diffraction, and interference), the course also reviews the development of the microscope, telescope, laser, Internet, information storage and display, and medical applications. While covering the fundamentals of optics and discussing engineering and applied sciences in the real world, this course also explores how optics interweaves with other Hajim School disciplines. (Fall)

EAS 108/ECE 101 Introduction to Computing Systems. This project-based course is designed to give students a general, high-level understanding of the workings of modern computing systems from circuit to computing system architecture to programming. It is intended to introduce students to (a subset of) principle topics in computer system designs. There is an emphasis on hands-on experience to give a “feel” of the materials that will be discussed in more depth in subsequent ECE courses. (Fall)

EAS 141 Basic Mechanical Fabrication. This half-semester, two-credit course teaches students the safe and effective use of basic machine tools such as lathes, mills, band saws, and drill presses. Students complete a number of projects that utilize these principles. Grades are based on the successful completion of these projects. Read more about this course at www.hajim.rochester.edu/news/eas_141.html. (Spring)

For More Information
Please visit www.hajim.rochester.edu/academics/options/engineering-science/index.html. Don’t forget to join the Hajim School’s Facebook page.

ENGLISH

Tell all the truth but tell it slant—
Success in Circuit lies
Too bright for our infirm Delight
The Truth’s superb surprise

—Emily Dickinson

Information about the Department
The Department of English offers undergraduates the chance to explore a wide array of literary works—poetry, drama, fiction, and nonfiction—from the traditions of British, American, and Anglophone literature. We have richly varied offerings in creative writing, in the study of film and other media, and in journalism, rhetoric, and theater. Our classes encourage exploratory thinking and conversation, always aiming to increase the students’ knowledge, their skills in reading and critical analysis, and their strengths as writers. The department offers opportunities for independent research and internships within both the University and the Rochester community, and we maintain close connections with other undergraduate programs in comparative literature, film studies, women’s studies, African and African-American studies, theater, and literary translation studies.

Students wishing to major in English can choose from four distinct tracks: British and American Literature; Creative Writing; Theater; and Language, Media, and Communication. Double majoring in English and in another discipline—astronomy or philosophy, political science or music—is common for our students. Many combinations are possible. The English Honors Program offers students the chance to write an extended honors thesis—critical or creative—in their senior year. We also offer minors in four areas: English literature, creative writing, journalism, and theater, as well as a diversity of clusters for students seeking to fulfill the cluster requirement in the humanities. Students with questions about any of these programs or possibilities should contact the department’s director of undergraduate studies.

Departmental Advice for First-Year Students
The English courses listed below are intended to introduce students to the study of literature, language, film, theater, and creative writ-
ing. They will allow students to discover the many ways of approaching imaginative works. Classes such as ENG 112, 113, 114, and 115 provide broad surveys of English and American literature—and their historical backgrounds—and are especially useful to those students considering the major in English literature or creative writing. Two of these classes are in fact required for these tracks in the major, and they can also be counted for requirements in the Theater and Language, Media, and Communication tracks.

It’s important to note, however, that neither these nor any of the 100-level classes we offer are in any way prerequisites for upper-level courses. First-year students should be aware that, in fact, the department has no hard and fast rules that prohibit them from taking most English courses at the 200 level, except for 200-level creative writing courses. If an upper-level course on, say, Shakespeare, the Victorian novel, modern poetry, post-Colonial literature, or contemporary film looks interesting, you should consider enrolling—although you might want to check with the professor if you have any questions about your preparedness.

For any additional questions about English courses or about the English majors, minors, and clusters, students should contact the director of Undergraduate Studies in English.

**Advanced Placement (AP)**
Students who have received a score of 4 or 5 on the AP exam in English Literature will be awarded 4 elective credits of English (not for use toward an English major) upon earning a “B” grade or better in an English literature course.

**International Baccalaureate (IB)**
English—Students who receive a higher-level exam score of 6 or better are awarded 4 hours of elective English credit (not for the major) after completion of an English literature course with a grade of C or better. No credit is granted for subsidiary level exams.

Theater Arts—Students who receive a higher-level exam score of 6 or better are awarded 4 hours of elective English credit (not for the major).

**Clusters**
American and African-American Studies; Creative Writing; Gender and Writing; Great Books, Great Authors; Literature and Cultural Identity; Media, Culture, and Communication; Medieval Studies; Modern and Contemporary Literature; Novels; Plays, Playwrights, and Theater; Poems, Poetry, and Poetics; Theater Production and Performance.

**Courses**

**Introductory and Gateway Courses**

ENG 100 Great Books: Myth. This course introduces students to mythology and its academic study using myths from a wide range of cultures and traditions, including Mesopotamia, Greece, Rome, China, India, Egypt, Sub-Saharan Africa, Scandinavia, Britain, and the Americas. Close study of particular myths and mythic literatures (word-of-mouth tales, epics, sagas, etc.) help us to investigate fundamental questions. What is myth? How did it shape the ancient world? How does it shape the present? How does it influence language? Literature? Art? Science? Personality? Culture? (Spring)

ENG 100 Great Books: Welcome to a Strange New Place. Your homeward-bound ship is lost at sea. You tumble down a rabbit hole. You wake up one morning to find that you have turned into an enormous beetle. Many of the best (and best-loved) works of the imagination, from The Odyssey to the Alice books to Star Wars, begin with fantastic dislocations, weird transmutations, and unexpected journeys to strange new worlds. And these sudden metamorphoses of place and person provide vehicles for representing some of the profoundest experiences in life: coming-of-age, vocation, revelation, exile, captivity, loving, aging, dying. In this Great Books course, we experience, ponder, and write about some of the most interesting and influential works of marvelous displacement in literature. Authors include Homer, Ovid, Shakespeare, Francis Bacon, Margaret Cavendish, Jonathan Swift, Daniel Defoe, Olaudah Equiano, Jane Austen, Lewis Carroll, Franz Kafka, Karen Blixen, and Ursula K. Le Guin. We also view films by Julie Taymor, the Coen Brothers, and Hayao Miyazaki. (Fall)

ENG 101 Maximum English. “English” is a little word for lots of things. Is it literature you want today or creative writing? film? theater? journalism? debate? Maximum “English” introduces you to all these areas and to our unique resources for studying and enjoying them—the full range of English here at the University of Rochester. So you’ll learn the fundamentals of reading and viewing from the department’s own creative writers, its literary and film critics and historians, and its theater directors. You’ll enlarge the experience of reading literature and criticism by listening to writers read their own original work and then discussing it with them. You’ll experience plays not only as written scripts but as living theatrical events by attending performances and talking to actors, directors, and designers about what they do to bring a play to the stage. You’ll encounter works in different media, from the live human voice to printed books, from the stage to film and multimedia digital texts. Maximum English will launch you into real English—newly expanded. (Fall)

ENG 105 “Race” in American Writing. As most scientists now agree, race is less a scientific truth than a social construct—a massively agreed-upon reality without real scientific basis. If this is true, then we might well wonder why U.S. culture embraced it in the first place. And if we accept the proposition that the reign of this strange idea is nearing the end of its history, we ought to become even more curious about how it has reigned so easily for so long. The answer might have more to do with language and literature than we would normally assume. If we take seriously the idea that race can be thought of as an elaborate “cultural fiction,” it makes sense to ask whether fiction and the arts actually helped to make it seem like such a significant truth of human identity. In this class, we trace the long career of “race” in America through a variety of literary works from the period of European colonization to the present. (Spring)

ENG 112/REL 140/CLA 140 Classical and Scriptural Backgrounds. Explores the great tradition, from Homer, Greek drama, Plato, and Virgil to the Bible and Dante. May count toward completion of the cluster in Medieval Studies and Great Books, Great Authors. (Fall)

ENG 113 British Literature I. An introductory study of early British literature, its forms and themes, and the development of our literary tradition. May count toward completion of the clusters in Medieval Studies and Great Books, Great Authors. (Fall)
**Film and Media Courses**

**ENG 114 British Literature II.** Major themes and central ideas in British literature of the 18th, 19th, and 20th centuries are discussed. May count toward completion of the cluster in Great Books, Great Authors. (Spring)

**ENG 115 American Literature.** Significant achievements by American writers of poetry, fiction, and other prose are covered. May count toward completion of the cluster in American and African-American Studies. (Spring)

**ENG 116 Introduction to African-American Literature.** This course surveys African-American literature of a variety of genres—poetry, drama, autobiography, fiction, and nonfiction—with a focus on the 18th and 19th centuries. The course interprets this tradition not only as the production of American writers of African descent but also as a set of works that display formal characteristics associated with black cultural traditions. Discussion topics include the meanings of race, the construction of black identity, and literature as historical document. Special attention is paid to approaching literary texts from a variety of critical perspectives. Featured writers include Phillis Wheatley, William Wells Brown, Frederick Douglass, Harriet W. Wilson, Charles W. Chesnutt, W. E. B. DuBois, Paul Laurence Dunbar, and more. Course requirements include two formal writing assignments, biweekly reading responses, and class participation. (Fall)

**Creative Writing Courses**

**ENG 121 Creative Writing: Fiction.** Our goal in this introductory workshop is to strengthen writing skills and expand our sense of the possibilities of imaginative fiction. As you write and hone your own original fiction, we examine the components of narrative in stories by diverse modern and contemporary writers. In particular, we studying the strategic use of point of view and the ways individual voices are defined through monologue, dialogue, summary, and scene. (Fall)

**ENG 122 Creative Writing: Poetry.** An introductory course in the art of writing poetry. In addition to reading and writing poems, students learn about various essential elements of craft such as image, metaphor, line, syntax, rhyme, and meter. The course is conducted in a workshop format, and instructor permission is required. To apply, email the instructor three to five poems or a small prose piece (fiction or creative nonfiction). (Fall and Spring)

**ENG 123 Playwriting.** An introductory course devoted to the understanding and execution of dramatic writing that is unique to the theater. (Fall)

**Language, Media, and Communication Courses**

**ENG 131 Reporting and Writing the News.** A laboratory course (requiring typing) on the fundamentals of gathering, assessing, and writing news. May count toward completion of the cluster in Language, Media, and Communication. (Fall, two sections)

**ENG 132 Feature Writing.** The study and practice of longer, more complicated newspaper and magazine stories, such as investigations and profiles. Emphasis is on the consideration of the various techniques of nonfiction writing. (Spring, two sections)

**ENG 133 Editing.** Study of newspaper and online editing with emphasis on news decision making; copy editing, ethics, and First Amendment issues such as libel. Applicable English Cluster: Media, Culture, and Communication. (Spring)

**ENG 134 Public Speaking.** Basic public speaking is the focus of this course. Emphasis is placed on researching speeches, using appropriate language and delivery, and listening critically to oral presentations. ENG 134 contains two quizzes, a final exam, and four speeches to be given by the student. The speeches include a tribute, persuasive, explanatory, and problem-solving address. The course utilizes instructor Curt Smith’s experience as a former White House presidential speechwriter. (Fall and Spring)

**ENG 135 Introduction to Debate.** The purpose of this course is to give students an appreciation for and knowledge of critical thinking and reasoned decision making through argumentation. Students research both sides of a topic, write argument briefs, and participate in formal and informal debates. Students also are exposed to the major paradigms used in judging debates. Applicable English cluster: Media, Culture, and Communication. (Fall and Spring)

First-year students are also welcome in 200-level ENG courses that do not require permission of instructor. Please see www.sas.rochester.edu/eng for full ENG course listings.
**Theater Courses**
The University of Rochester International Theatre Program produces four major productions annually as well as other events (including a student One Act Play Festival). The program also offers students classes in acting, voice and movement, playwriting, directing, and backstage/technical arts. Though there is no theater major, an English major with a concentration in theater and an English major with theater minor are available. Detailed information about the University of Rochester International Theatre Program can be found at www.sas.rochester.edu/theatre.

**ENG 123 Playwriting.** An introductory course devoted to the understanding and execution of dramatic writing that is unique to the theater. May count toward completion of the cluster in Theater Production and Performance. (Fall)

**ENG 170 Technical Theater.** An introductory course on the theories, methods, and practice of set construction, power tools, rigging, stage lighting, drafting, sound, and scene painting. Lab participation in theater program productions is required. May count toward completion of the cluster in Theater Production and Performance. (Fall)

**ENG 172 Introduction to Stage Lighting and Sound.** The course undertakes to introduce students to the various elements of theater design. Lighting techniques, sound design, and set design are all covered from time to time. May count toward completion of the cluster in Theater Production and Performance. (Fall)

**ENG 174 Acting Techniques I and Acting Lab.** Training in the techniques by which individual actors set forth the characters recorded in dramatic texts. May count toward completion of the cluster in Theater Production and Performance. (Fall)

**ENG 176 Voice and Movement for the Actor.** An introductory course on voice and movement for the actor, concentrating on the ability of the actor to maximize the use of the body and voice to express emotion and character. May count toward completion of the cluster in Theater Production and Performance. (Fall)

**ENG 178 Design for Stage: Costumes.** This course addresses both conceptual and practical aspects of the creation of costumes for live performance. Students acquire an understanding of the history and theory of costume design, with emphasis placed on the creative association of costumes and image; the process of developing a well-crafted, professional design from script to technical rehearsal to performance; and hands-on experience with tools and techniques used to build a costume design and execute it on stage. (Fall)

**ENG 180 Directing (and Directing Lab).** Introductory directing techniques for aspiring directors. Exploring the nature of the theatrical events, investigate the nature of conceptualization, visualization, text analysis, action, and design as they pertain to the director’s craft. In conjunction with a weekly scheduled lab. May count toward completion of the cluster in Theater Production and Performance. (Fall)

**ENG 290 Plays in Production.** Set building, prop and costume development, and publicity for current production. May count toward completion of the cluster in Theater Production and Performance. (Fall)

**ENG 292/294 Plays in Performance.** For actors and stage managers working on the current production. May count toward completion of the cluster in Theater Production and Performance. (Fall)

**ENG 296 Stage Management: Fall.** Students in stage management get an in-depth introduction to and immersion in stage managing a theatrical production. In addition, cover all areas of management skills, safety procedures, technical knowledge, and paperwork, students are expected to serve as an assistant stage manager or production stage manager on one (or both) theater program productions in their registered semester. May count toward completion of the cluster in Theater Production and Performance. (Fall)

**ENG 298 Performance Lab: 1st Production.** Mandatory acting lab for students in ENG 291. A lab tutorial providing technical help for actors and stage managers in Plays in Performance (Eng 292/3/4/5). (Fall) (2 credits)

**ENG 398 Theater Internship: Public Relations and Marketing.** Students taking the PR Internship class help create all publicity materials for events in Todd Theater or events sponsored by the Theatre Program, including drafting press releases, planning marketing campaigns, etc. They distribute publicity materials both on and off campus. Finally, PR interns staff the box office during productions, interacting with the public and the theater personnel. The PR internship is an excellent way to get a hands-on introduction to all the basic elements of public relations and marketing. Students also interact with artists, directors, journalists, and public relations professionals as part of the internship. Interns should have good writing skills and be willing to work creatively. Skills in graphic design are a plus. (Spring)

For More Information
Please visit the English program website at www.sas.rochester.edu/eng.
Courses

These first three introductory courses may lead into the film studies clusters.

**FMS 132/ENG 117 Introduction to the Art of Film.** This course presents the concepts of film form, aesthetics, and technique, while remaining attentive to the various ways in which cinema also involves an interaction with audiences and larger social structures. We closely examine the construction of a variety of film forms and styles—including the classic Hollywood style, new wave cinemas, experimental films, and contemporary independent and global cinemas. We also pay particular attention to the construction of film images, systems of film editing, film sound, and the various ways in which film systems can be organized (narrative, non-narrative, genres, etc.). Same as AH 136. (Fall)

**FMS 131/ENG 118 Introduction to Media Studies.** Discusses the cultural and economic history of visual media, with a focus on U.S. TV and questions of race, gender, and cultural identity. We cover histories of different types of media (telegraph, radio, audio recordings, television, film, Internet, etc.) as well as various theories and approaches to studying media. Same as AH 102. (Spring)

**FMS 161/SA 161 Introductory Video and Sound.** This course introduces the basic aesthetic and technical elements of video production. Emphasis is on the creative use and understanding of the video medium while learning to use the video camera, video editing processes, and the fundamental procedures of planning a video project. Video techniques are studied through screenings, group discussions, readings, practice sessions, and presentations of original video projects made during the course. (Fall and Spring)

**FMS 162/SA 162 Concepts in Introductory Video and Sound Art.** This course introduces the basic aesthetic and technical elements of video production while exploring specific topics through production, readings, research, presentations, and writing assignments. Emphasis is on the creative use and understanding of the video medium while learning to use the video camera, video editing processes, and the fundamental procedures of planning a video project. Video techniques are studied through screenings, group discussions, readings, practice sessions, and presentations of original video projects made during the course. (Fall and Spring)

Please visit the film and media studies program website at www.sas.rochester.edu/fms.
GEOMECHANICS

"Can one think that because we are engineers, beauty does not preoccupy us or that we do not try to build beautiful, as well as solid and long-lasting, structures? Aren’t the genuine functions of strength always in keeping with unwritten conditions of harmony?"

— Gustave Eiffel

Information about the Program

A four-year Geomechanics Program is offered jointly with the Department of Earth and Environmental Sciences and the Department of Mechanical Engineering for students interested in the application of the field of mechanics to problems associated with the atmosphere; rivers, lakes, and oceans; and the solid earth. Students following this program should be well equipped for employment or graduate work in a variety of fields, including geophysics, hydrology, structural geology and rock mechanics, civil engineering, oceanography, meteorology, environmental sciences, engineering geology, limnology, geothermal and petroleum exploration and production, and coastal and marine geology.

The geomechanics degree is awarded by the College in either the School of Arts and Sciences or in the Hajim School of Engineering and Applied Sciences—the choice is made by the student. If the student chooses the School of Arts and Sciences, his or her major advisor will be in the Department of Earth and Environmental Sciences; if the degree is to be granted through the Hajim School, the major advisor will be in the Department of Mechanical Engineering. In each case, the student will also have a minor advisor in the other department.

Advice for First-Year Students

The geomechanics curriculum is built around basic mathematics, physics, chemistry, earth and environmental sciences, and engineering courses. The required earth and environmental sciences courses cover geologic processes, the evolution of the earth, mineralogy, and structural geology. Required engineering courses deal with basic mechanics, thermodynamics, fluid mechanics, and solid mechanics. Technical electives, chosen from a number of earth and environmental sciences and engineering offerings, include courses in geophysics, fluid dynamics; advanced mechanics; heat transfer; rheology; rock mechanics; materials science; hydrology; sedimentary processes; and computational, field; and laboratory studies.

HISTORY

"He to whom the present is the only thing that is present, knows nothing of the age in which he lives."

— Oscar Wilde

Information about the Department

The Department of History is a dynamic community of teachers-scholars interested in studying the origins and formation of the complex, multicultural, and interconnected world in which we live. Our distinguished faculty shares a commitment to excellence in teaching and working closely with students to develop historical literacy, critical thinking, writing, and research skills. We use cutting-edge methods to connect the present with the past and to consider human experience across time and space. Because an understanding of the past is crucial to a wide array of political, economic, literary, artistic, anthropological, and humanistic studies, taking history courses can also benefit students majoring in these disciplines.

The department offers programs of study leading to the BA degree, the BA degree with honors and (on the graduate level) Masters and doctorate degrees. We also offer a minor in history. Non-majors are welcome in almost all history courses and typically become enthusiastic, successful participants. The history concentration is
Advice to First-Year Students

The department recommends that incoming first-year students enroll in one or more of the 100-level or 200-level regional or topical courses prior to taking HIS 200, Gateway to History. History 200 introduces students to the practice of history. Each section focuses on a specific topic offered by a professor specializing in this subject (for example, the Eastern Front in World War II or pirates of the Caribbean). The registrar’s course schedule (CDCS) lists the topic for each section. History majors are encouraged to complete History 200 in their first or second year, so prospective majors should consider taking this class early. However, History 200 is not a prerequisite for other 100- or 200-level history courses.

Most of our introductory courses also provide an excellent entry into a number of departmental clusters (see course list and applicable clusters below). As a discipline, history covers different cultures, multiple eras, and various approaches to a wide array of subjects. Consequently, history majors are required to take a diverse selection of courses covering time periods before and after 1800 and at least three different geographical areas of the world. Introductory courses meet this distribution requirement, as do more advanced courses. Majors also choose a five-course topical geographical area.

Students who choose to double-major in history and another discipline or program in the humanities or the social sciences may, with the permission of the director of Undergraduate Studies, use one or two courses from the other major toward the fulfillment of the history major; double majors must, however, meet the geographical and chronological distribution requirements and the upper-level writing requirement with history courses.

Students with doubts about whether a given course is right for them are urged to discuss their selections with the course’s instructor or their academic advisor. The director of Undergraduate Studies also welcomes visits from prospective students during office hours or by appointment. Other faculty are also available during their on-call advising hours.

Majors can pursue summer or semester-long public history internships (HIS 394) at a variety of local and regional museums, historic sites, archives, municipal agencies, and the Department of Rare Books and Special Collections in Rush Rhees Library. These internships provide valuable “hands-on” experience in a wide range of history-related careers.

First-year students interested in history are also encouraged to join the Undergraduate History Council, which provides information about the department, sponsors lectures, and holds social events.

Advanced Placement (AP)

Advanced placement credit will be granted for scores of 5 on either the American History, European History, or World History exam. This credit is elective credit and may not be used to satisfy the geographical or chronological distribution requirements in the major or minor or to satisfy the focus requirement in the major. A student may not receive more than a total of 4 elective credits for AP exams.

International Baccalaureate (IB)

International Baccalaureate credit will be granted in cases where students score 6 or better on their higher-level exam. No credit is granted for subsidiary-level exams. This credit is elective and may not be used to satisfy the geographical, chronological, or focus requirements of the major. A student may not receive more than a total of 4 elective credits for IB exams.

Clusters

Most courses offered by the history department can be used toward a social sciences cluster in history, and many can be used for clusters outside of the department. A brochure listing the history department’s clusters is available at the department office in Room 364, Rush Rhees Library, or it can be viewed through the online cluster list/search engine at https://secure1.rochester.edu/registrar/CSE/.
Introductory Courses (2017–18)

Fall 2017 Semester

HIS 106 Witchcraft and Witch Trials. During the Renaissance and Reformation, many people throughout Europe became convinced that society was threatened by conspiracies of witches.

HIS 107 The City: Contested Spaces. What does it mean to live in a city? Can you reshape people’s lives by redesigning city spaces? How do city dwellers, architects, politicians, and others interact with and appropriate their own urban past?

HIS 110 The Making of Modern Africa. This course uses film, novel, and historical studies to examine the following themes in the making of modern Africa: the forging of new national identities; creation of wage laborers; and the restructuring of agricultural work, gender, and social age.

HIS 127 Foundations of Medieval France. This course provides an introduction to the study of history through an investigation of “the long 12th century” in France, using both primary and secondary source materials, discussion, analytic reading, and good practice of the writing of history.

HIS 128 Postwar Europe. Until the fall of the Berlin Wall in 1989, the past, present, and future of postwar Europe appeared permanently divided, dominated by an inevitable ideological clash. Collapse of the Iron Curtain, however, required a dramatic re-examination, as the once immutable Cold War now appeared more as a postwar parenthesis.

HIS 143 Modern China, 1600–Present. This class covers the search for modern China in the 20th century. We trace how China, between invasion, war, and revolution, transformed from an empire to a republic, from republic to Communist state, and from Communist state to the economic powerhouse that it is today.

HIS 150 Colonial Latin America. This introductory survey focuses on the Spanish and Portuguese conquests and colonization of the region that we now know as Latin America.

HIS 154 History of Latin America through Soccer. In this course, we use soccer as a lens to study the development of modern Latin American history, culture, and politics.

HIS 156 A Communist Country on America’s Doorsteps: Cuba from Columbus to Present. While the socioeconomic and political situation in Cuba has changed considerably since the collapse of the Soviet Union, and the process of normalizing relations with the United States is in progress, Cuba has been for many decades a communist country just 90 miles away from American shores.

HIS 164 Democratic America. Jefferson, Jackson, party formation, popular culture, and sectionalism.

HIS 166 Liberal America. This course is an examination of the development of American politics, society, and culture between the onset of the Great Depression and the Watergate scandal.

HIS 174 American Military History. American history has been largely shaped by wars. This course surveys the history of American wars; the military, naval, and civil institutions that have been created to serve the changing needs of national defense; and the citizens-soldiers who have preserved the liberty of the Republic.

HIS 190 Darwin and Science in America. This course explores the development and reception of Darwin’s theory of evolution from the publication of On the Origin of Species (1859) to present debates about scientific determinism.

HIS 200 Gateway: Pirates of the Caribbean. History 200 is an introduction to historical practice—what professional historians actually do. It is a requirement for history majors, but we encourage all interested undergraduates to enroll.

HIS 200 Gateway: Lincoln’s America. History 200 is an introduction to historical practice—what professional historians actually do. It is a requirement for history majors, but we encourage all interested undergraduates to enroll.

HIS 209 Corruption and the Global Economy in Historical Perspective. This junior seminar offers students the opportunity to research and discuss the operation and consequences of widespread corruption in the global economy and the complex historical processes—economic, social, and political—which help to explain the phenomenon.

HIS 211 Guns, War, and Revolution in Southern Africa. The peoples of southern Africa’s 15 states (about 290 million in 2010) freed themselves from European colonialism in two different ways.

HIS 221 Twentieth Century European Thought. This course is an introduction to the main currents of European thought in the 20th century—a century historian Eric Hobsbawm has rightly termed the “Age of Extremes.”

HIS 222(W) The Enlightenment. The Enlightenment—the structure of ideas typical of 18th-century Europe and the Americas—shaped and was shaped by increasing globalization and the clash of cultures between whites and indigenous peoples.

HIS 224(W) The South and the World. “Tell about the South,” demands Shreve McCannon in William Faulkner’s Absalom, Absalom! Was the “Old South” a region stuck in time—anti-modern, anti-North, and anti-black—or was it, as historians have recently suggested, “an active participant in, and even a promoter of, change and progress?”

HIS 225 Europe and the Great War. This course is an introduction to the history of Europe during the First World War.

HIS 226(W) History of Friendship. The course is an exploration of the history of friendship focusing on the 19th century and the United States.

HIS 231 The French Revolutions. The revolutions that took place in France and the rest of Europe in the 1780s and 1790s were brutal and explosive. They caused a discontinuity in time and the rhythms of ordinary life but also produced ideas of government and the self that have cast a long shadow over today.

HIS 235(W) Earth, Wind, Water, Fire: An Environmental History of the Globe. This course is a global history of the world from the Columbian Exchange to the present. Using the four basic elements of earth, wind, water, and fire, we explore the earth’s environmental history from the bottom up.
HIS 236(W) Digital History Yellow and Yangtze Rivers. The Yellow River was the “cradle of Chinese civilization.” The Yangtze River is the artery of China’s wealth. Both of them originate from the Tibetan plateau and meander over 3,000 miles across China until they finally meet the Pacific Ocean.

HIS 248 Samurai. Swordsman/Servant/Warrior. Popular imagery portrays the samurai and their warrior code (Bushido) as the “soul” of Japan, and the samurai are as heavily romanticized as the knights of medieval Europe.

HIS 252(W) Immigration and the Americas. Although the United States received the largest number of immigrants in the western hemisphere in the 19th and 20th centuries, the relative impact of immigrants was just as important in other countries such as Argentina and Brazil.

For More Information
For a full list of our Spring 2018 courses and other department information, please visit the history department website at www.sas.rochester.edu/his/ or contact Professor Laura Smoller, director of Undergraduate Studies (Laura.Smoller@rochester.edu).

JEWISH STUDIES

"Courage is a special kind of knowledge: the knowledge of how to fear what ought to be feared and how not to fear what ought not to be feared."
—David Ben-Gurion

Information about the Program
The undergraduate Jewish studies program at University of Rochester is designed to enable students to become familiar with the history, religion, philosophy, literatures, languages, and politics of Judaism. As Jewish civilization developed across a variety of geographical and cultural areas of the world and over thousands of years, the program’s course offerings reflect the complex, many-faceted, and heterogeneous dimensions of the Jewish experience with classes on the Hebrew Bible; ancient, medieval, and modern Jewish history; the Holocaust; Gender Studies; American Judaism; modern Jewish literatures; and classical and Modern Hebrew. As an interdisciplin-
Courses

Fall Semester

**Judaism**

**JST 106 Introduction to the Old Testament.** This class examines the texts of the Hebrew Bible (Old Testament for Christians) in their religious, historical, and literary contexts. In this course, students learn the history of the Ancient Israelite people from their origins down through the post-Exilic period. Study of the texts of the Hebrew Bible (Old Testament) enable us to explore what we can know about ancient Israelite society and culture, the rise and fall of Israel as a nation-state, religious and theological debates about the role of God in shaping history and the problem of suffering, as well as the writing of the biblical texts and the development of the canon.

**JST 121 Women in Judaism.** This course examines approaches to the body and gender as described and manifested in Jewish texts, rituals, and communal practice from the biblical period to the present. We look at interpretations of the body and its effect on the status of women in particular in the Bible and Talmud, paying close attention to the historical and cultural contexts of these interpretations. There is a strong focus on modern revaluations of gender and the body and how such revaluations have transformed what it means to be “Jewish.” Topics include rites of passage, images of women in the Bible, and feminist theology as well as theories and depictions of the “Jewish body.”

**JST 253 Zionism and Its Discontent.** This course explores the emergence and developments of Zionist ideologies in the 19th and 20th centuries. Following this, we consider a number of recent explorations of Zionism in practice as well as Jewish and Palestinian critics of the Zionist project.

**Hebrew**

**HEB/JST 101 Elementary Modern Hebrew I.** Introduction to the structure of standard Modern Hebrew. This class is intended for students with no previous instruction in the language or for those who have had some unsystematic exposure to it. Practice in reading, writing, basic use, and grammar. In addition to texts, relevant cultural materials are provided through the use of video and technology-based materials.

**HEB/JST 103 Intermediate Modern Hebrew I.** Direct continuation of Hebrew 102 with emphasis on enhancing reading comprehension and writing and speaking skills in standard Modern Hebrew. Students enrolling are expected to have a good understanding of basic Hebrew grammar structures, including familiarity with common verb forms. In addition to texts, relevant cultural materials are provided through the use of video and technology-based materials.

**HEB/JST 204 Hebrew through Media and Literature.** Designed to develop advanced reading and conversational skills using various materials, including Israeli newspapers, Hebrew movies and songs, and texts from Modern Hebrew literature (fiction and poetry). Writing skills are enhanced through a series of related home assignments. Review of Hebrew verbal system and syntactical structures and enrichment of vocabulary are also among the objectives of this course.

Spring Semester

**Judaism**

**JST 113 History of Judaism.** This class provides an introduction to the religious and cultural development of Judaism. Emphasizes Judaism as a living tradition, one that has been subject to both continuity and change among its practitioners throughout its history.

**JST 265 Israel/Palestine.** This course provides a nonpartisan introduction to the conflict between these two national movements. Discussion focuses on an examination of historical documents in addition to an understanding of how the ongoing conflict plays out in literature and film.

**Hebrew**

**HEB/JST 102 Elementary Modern Hebrew II.** Direct continuation of Hebrew 101 with emphasis on enhancing basic reading, writing, and speaking skills in standard Modern Hebrew. In addition to reading texts, relevant cultural materials are provided through the use of audio, video, and technology-based materials.

**HEB/JST 104 Intermediate Modern Hebrew II.** This is a fourth semester course in the Hebrew language series designed as a direct continuation of HEB 103. The focus of instruction is on the enhancement of language skills through the acquisition of complex morphological and syntactical structures and the expansion of vocabulary and idioms. The course has an emphasis on oral and written communication in both standard and colloquial Modern Hebrew. In addition to reading texts, relevant cultural materials are provided through the use of audio, video, and technology-based materials.

**HEB/JST 110 Introduction to Biblical Hebrew.** A one-semester introduction to classical Hebrew for beginners. The course covers the Hebrew writing system (alphabet and pointing/vocalization rules), basic grammatical structures and vocabulary, and the guided reading and translation of selected simple biblical narratives.

For More Information

Please visit the website of the Center for Jewish Studies at www.sas.rochester.edu/jst/index.html.

For a list of all courses offerings in Jewish studies and complete minor and clusters requirements, consult the Jewish studies program website at www.sas.rochester.edu/jst/courses.html.

For a list of all courses offerings in Hebrew and complete minor and clusters requirements, consult the website of the Department of Religion and Classics at www.sas.rochester.edu/rel/undergraduate/index.html.
LATIN AMERICAN STUDIES  
(MODERN LANGUAGES AND CULTURES)

Information about the Program
The minor in Latin American studies gives students a broad view of Latin American cultures and their relations to the United States and the rest of the world.

A total of five courses related to Latin American people, their languages, and their cultures are required for the minor; roughly half of the course content must feature content relating to Latin America. Two courses must be from two different academic areas such as anthropology, business, economics, history, international relations, political science, Portuguese, religion, or Spanish. Students are permitted to use up to two study abroad courses with approval of one of the program advisors (please refer to website).

Students interested in the Latin American studies minor are strongly encouraged to work with one of the Latin American program advisors (please refer to website).

Students wishing to satisfy the humanities or social sciences division requirement must take three of the five classes from that division.

Program Advice for First-Year Students
Students interested in pursuing the Latin American studies minor are encouraged to work closely with a program advisor (please refer to the website) in developing their plan of study. A language prerequisite must be successfully completed before students are eligible to declare a Latin American studies minor. Students must complete either SP 151 and SP 152 (Intermediate Spanish I and II) or POR 151 and POR 152 (Intermediate Portuguese I and II). Students who are placed in SP 200, Advanced Spanish Composition, may use this course as their language prerequisite.

For More Information
Please consult the Latin American studies minor website at www.sas.rochester.edu/mlc/undergraduate/spanish.html#lasminor.

LEGAL STUDIES  
(MULTIDISCIPLINARY STUDIES CENTER)

Information about the Program
The legal studies program offers both a minor and two clusters. The minor in legal studies is an interdisciplinary program of study that gives students the opportunity to examine law from a variety of perspectives. The study of law is a humanistic enterprise and, while the minor should be useful for those who may be thinking of attending law school, it should not be considered a program in preprofessional training.

The goals of the minor are to educate students in certain broadly relevant analytical skills, to introduce students to what it means to study a social phenomenon from a variety of perspectives, to help students obtain a better understanding of law and the multiple functions it plays in a variety of societies, to encourage writing and the development of writing skills, and to stimulate greater interaction among faculty interested in law and society.

Program Advice for First-Year Students
Since many of the courses in the program are upper-level courses in the departments involved, first-year students who are interested in the minor may wish to begin by taking appropriate introductory courses in some of the relevant departments. Most legal studies minors do not declare the minor until their sophomore or junior year. Students of any year who are interested in the legal studies minor are encouraged to consult a legal studies minor advisor.

Clusters
There are two clusters in legal studies, one in the humanities division and one in the social sciences division.
Courses

**ANT 104 Contemporary Issues and Anthropology.** This course examines how anthropologists study one of today’s pressing issues. The course shows the distinctive ways anthropologists study the world and considers how ethnographic research can contribute to our understanding of pressing contemporary social problems and their solutions. *Open only to first- and second-year students.* (Spring)

**ENG 135 Introduction to Debate.** The purpose of this course is to give students an appreciation for and knowledge of critical thinking and reasoned decision making through argumentation. Students research both sides of a topic, write argument briefs, and participate in formal and informal debates. Students are also exposed to the major paradigms used in judging debates. (Spring)

**HIS 166 Liberal America, 1929–1973.** This course is an examination of the development of American politics, society, and culture between the onset of the Great Depression and the Watergate scandal. It focuses on the creation and consolidation of the “New Deal order”—a liberal political economy centered on a constrained corporate capitalism, a modest welfare state, and a national security apparatus designed to wage the Cold War and extend American power abroad. (Fall).

**PHL 103 Moral Problems.** An introduction to moral philosophy as applied to current topics. Reasoned analysis of controversies concerning such matters as the death penalty, abortion, individual rights, sexual harassment and discrimination, global justice, terrorism and civil liberties, animal rights, and the environment. (Fall and Spring)

**PHL 105 Reason and Argument.** Methods of identifying, interpreting, reconstructing, and evaluating reasoning found in speeches, essays, editorials, magazine articles, and scientific reports. Analytical methods mastered in this course do not include those of formal symbolic logic. (Fall)

**PHL 110 Introductory Logic.** Logic is the study of valid forms of argument. This course is an introduction to symbolic logic, a modern theory of logic that involves the construction of an artificial symbolic language within which the logical forms of sentences can be expressed and the validity of arguments can be proven. Students learn two logical systems: sentence logic and predicate logic. In addition to translating English arguments into symbolic form and constructing interpretations to demonstrate the invalidity of arguments, students also learn how to prove that an argument is valid using a set of rigorously defined implication rules for each logical system. (Fall)

Spring Semester

For information on spring course offerings, please visit the legal studies website.

For More Information
Consult the legal studies program website at www.rochester.edu/college/msc/legal-studies.html.

**LINGUISTICS**

“The job of the linguist, like that of the biologist or the botanist, is not to tell us how nature should behave, or what its creations should look like, but to describe those creations in all their messy glory and try to figure out what they can teach us about life, the world, and, especially in the case of linguistics, the workings of the human mind.”

—Arika Okrent

**Information about the Department**

Language is among the most complex cognitive facilities we possess. Contemporary linguistics is the study of the formal aspects of language structure—what it is that we know when we know a language. For the most part, linguistic knowledge is tacit. We learn language; we are not taught it. Uncovering the structure of language is the work of formal linguistics.

The Department of Linguistics offers courses in the major areas of theoretical linguistics: phonetics, phonology, syntax, semantics, and pragmatics. In addition, we offer a number of 100-level non-technical courses in linguistics that focus on how language interacts with aspects of culture and society.

Linguistics courses offer students a unique combination of humanistic and scientific concerns and tend to draw interested students from a broad range of disciplines in the sciences and humanities, from biology and cognitive sciences to art and visual studies. The commonality is a deep intellectual curiosity about human languages.

Students find that linguistics gives them experience in approaching and analyzing complex empirical data in a systematic way, a skill useful in a variety of careers. Our graduates enter fields such as teaching, law, linguistics, speech pathology, and research, among others.

**Departmental Advice for First-Year Students**

The 200-level courses are the courses of the major and minor and require LIN 110 Intro to Linguistic Analysis, which is the gateway course into the major.

The 100-level courses address contemporary issues with a perspective on language and society that is informed by contemporary linguistic analysis. The 100-level courses do not require technical background in linguistics. These courses are suitable for first-year
students. LIN 110 is one of the core course for the major and the prerequisite for most of the 200-level courses. First-year students with a strong interest in linguistics are advised to take LIN110. New courses may be added to reflect the interests of students. Please check the course listings in the undergraduate section of the department website.

Students with an interest in linguistics are encouraged to take courses in one or more languages in addition to their linguistics courses.

Clusters in linguistics satisfy the cluster requirements for social sciences.

Courses in 2017–18

Every term

LIN 110 Introduction to Linguistic Analysis. This course introduces students to the study of the structure of human language. We cover the six core areas of linguistic investigation: phonetics (articulation, acoustics, and perception of speech sounds), phonology (sound patterns), morphology (internal structure of words and their organization in the mental lexicon), syntax (internal structure of phrases and sentences), semantics (word and sentence meaning), and pragmatics (language use in context). The course focuses on developing skills in the areas of linguistic data analysis and interpretation of linguistic data in ways that aim to address theoretical and empirical issues in the study of language. In addition to the lecture, students need to register for a peer-led workshop. Part of clusters S1LIN001, S1LIN002, S1LIN004, S1LIN005, and S1LIN007. (Fall and Spring) Please note: Students who take LIN 110 in the fall may be eligible to take 200-level courses in the spring.

Fall

LIN 101 Ecolinguistics: Language and Movement. This new course is a combined investigation of linguistics and movement. In the context of sustainable living, the course examines how verbal and nonverbal expression manifest and shape overall wellbeing. Each year, a different theme will be addressed. The theme for this year is memory and forgetting. We explore the scale of emotional polarities from rage to serenity in connection to wellbeing. The course addresses questions such as: What role does memory play in our physical being and outward expression? What distinguishes the range of mundane—ritualized movement and communication? How does context influence experience and expression? What role do patterns play in verbal and nonverbal communication and memory? The course is cross-listed to bring students from each discipline together to deepen their study of human expression by offering additional perspective to the mutually fascinating subject of language. Part of cluster S1LIN006.

LIN 103 Language and Sexuality. This course investigates various aspects of language as used by members of sexual minority groups, focusing on language of and about gay men, lesbians, bisexuals, and transgender people, including “reclaimed epithets” (e.g., “dyke” and “queer”), gender versus sexuality versus sex, and the role of language in creating/maintaining sexual categories and identities. Part of clusters H1GSW005 and S1LIN002.

LIN 104 Language and Culture. This course investigates the relationship between language and culture at the interface of linguistics and anthropology. It examines the ways in which language reflects the perception of the world, ways of life, and beliefs of its speakers; creates rituals and maintains social ties; and is used by people of different ages, genders, social classes, and ethnicities. We discuss hypotheses that try to explain the nature of the relationship between language and culture and then turn to a wide variety of topics that are relevant for both linguists and anthropologists. These include, for instance, kinship systems and language, language of perception (e.g., colors, spatial relations), culture and language change/language variation, writing systems, and intercultural communication. Part of cluster S1LIN006.

LIN 105 Language and Advertising. The course examines the use advertisers make of language in selling their products and how it affects our perceptions of the product and ourselves. The emphasis in the course is on learning about the structure of language and how we can use it as a guide to observing and understanding the effectiveness of commercial messages. Part of clusters S1LIN002, S1LIN006, S1MAS001, H1FMS001, and H1FMS002.

Spring

LIN 162 Modern African-American English. This course looks at the varieties of English used primarily by and among African Americans. We first explore and discuss the linguistic features (lexicon and grammar) of African American Vernacular English (AAVE)—also called African American English. We also investigate the ways in which AAVE is being utilized in popular culture. Additionally, we look at AAVE’s connection to African languages and creoles. Finally, this course looks at the issues connected to AAVE and attitudes toward this variety and its effects on teachers’ expectations and students’ progress as well as on linguistic profiling and discrimination in employment and housing. Part of cluster S1LIN006.

LIN 220 Introduction to Grammatical Systems. This introductory course examines the grammatical structure of sentences from the standpoint of transformational grammar. The course develops the basic techniques of syntactic analysis in order to develop a working grammar of (a fragment of) English. No syntax background is assumed. This course is intended for majors and nonmajors alike. In addition to the lecture, students need to register for a peer-led workshop. Prerequisite: LIN 110 (Fall). Part of clusters S1LIN002, S1LIN004, S1LIN007, and S1MAS001.

For More Information
Please visit the linguistics department website at www.ling.rochester.edu.
The universe is a grand book which cannot be read until one first learns to comprehend the language and become familiar with the characters in which it is composed. That language is mathematics.”
—Galileo Galilei

Information about the Department

The Department of Mathematics has several introductory sequences to suit students’ interests and goals. The sequence MTH 161–162 is the standard introductory calculus sequence for students who intend to major in mathematics, a physical science, engineering, or another technical field. The sequence MTH 141–143 covers the same material as MTH 161–162 but at a slower pace (in three semesters rather than two), using the same textbook. Students lacking the algebra or trigonometry background necessary to perform successfully in MTH 141 should take MTH 140, Foundations of Calculus. The department also offers the honors calculus sequence MTH 171–174 for talented students interested in mathematics or its theoretical applications to other fields. See below for more information on these sequences and AP credit rules.

One of the primary factors conducive to success in mathematics is placement in the appropriate course. The Department of Mathematics uses a combination of SAT and ACT scores, AP calculus exam scores, and high school records to place students. Advanced Placement credit rules take precedence over SATs and ACTs.

For students placed in either MTH 140 or MTH 141 who wish to enroll in a higher course, there will be a placement test offered at the beginning of the semester. See the placement web page www.sas.rochester.edu/mth/undergraduate/handbook/placement.html for more information regarding placement guidelines. In case of discrepancy or questions, students are encouraged to speak with a representative of the mathematics department at the Academic Open House during Orientation.

Advanced Placement (AP)

The Department of Mathematics gives credit and placement to students who have taken the CEEB Advanced Placement examinations in Mathematics (Calculus AB and Calculus BC) as follows:

"Note: taking more than one MTH course per semester in the first year is usually discouraged. Students wishing to do so should discuss their plans with a departmental representative.

AP Calculus, AB exam:
Score of 4 or 5—Student will be placed in MTH 162 or 171 (after consultation with a mathematics faculty member) with one semester advanced placement (MTH 161, 4 credits) granted.

AP Calculus, BC exam:
Score of 3—Student will be placed in MTH 162 or 171 (after consultation with a mathematics faculty member) with one semester advanced placement (MTH 161, 4 credits) granted.
Score of 4 or 5—Student will be granted two semesters of advanced placement (8 credits) for MTH 161 and MTH 162, and placed in MTH 164 or 165. Students interested in gaining a deeper understanding of mathematics are encouraged to register instead for MTH 171 and receive 4 credits of advanced placement. In rare instances of exceptional preparation, students may register for MTH 173 in consultation with the instructor of that course and receive 8 credits of advanced placement for MTH 161 and MTH 162.

Students who receive AP credit for MTH 161 may register for MTH 162 or 171. MTH 171 is particularly recommended for students interested in mathematics, physics, computer science, or theoretical engineering who would like to gain a deeper knowledge of how and why calculus works so effectively.

There is no advanced placement in the 140 sequence.

Note: An "AB subscore" is reported along with the BC score. Placement and credit should be the more generous of the two resulting from using both the AB subscore and the BC score in the guidelines above. However, if the difference between the AB subscore and the BC score is greater than or equal to two, the student should be referred to the mathematics table for further guidance.

International Baccalaureate (IB)

Mathematics—Students who score a 4 or better on a higher-level exam are placed into MTH 162 and awarded credit for MTH 161 after completion of MTH 162 with a grade of C or better. No credit is granted for subsidiary level exams.

Clusters

All of the following courses belong to various clusters in mathematics. MTH 141 and 161 are also part of many clusters in the natural sciences.

Courses

Traditionally, the different sections of the standard calculus sequences, MTH 141–143 and MTH 161–162, are coordinated with each other. They cover the same material, assign the same homework, have common exams, and are graded on a common scale.
MTH 130 Excursions in Mathematics. The nature of mathematics and its application are discussed. Emphasis is on concepts and understanding rather than techniques. This course is intended mainly for concentrators in the humanities. (Spring)

MTH 140 Foundations of Calculus. This course covers precalculus material and is intended for students lacking the algebra and trigonometry background necessary to perform successfully in MTH 141. After completing this course, students are ready to take MTH 141. MTH 140 is offered in the fall only and is open to all incoming first-year students.

MTH 141–143 Calculus I, II, III. This sequence covers the same material as MTH 161–162 (see below) but in three semesters rather than two, using the same textbook. MTH 143 is an adequate prerequisite for MTH 164 and 165. Courses 141–143 must be taken in sequence and are offered every fall and spring. MTH 141 is open to all first-year students placed in MTH 141 or a higher-numbered course.

MTH 150 Discrete Mathematics. Logic, functions, algorithms, mathematical reasoning, mathematical induction, recurrence relations, techniques of counting, equivalence relations, graphs, trees, as well as specific questions given by the “Seven Bridges of Königsberg” problems. Required for computer science majors. Open to all first-year students. (Fall and Spring).

MTH 150A Discrete Mathematics Module. This module course is only available to students who are taking MTH 171 or MTH 173 and yields only 1 credit. Students do the exams in the regular MTH 150 course and may attend lectures if they wish. This module is primarily for computer science majors who need MTH 150 credit for their Spring Semester computer science courses but have no room in their schedule for the regular 4-credit course.

MTH 161–162 Calculus IA, IIA. The sequence 161, 162, is the standard introductory calculus sequence for students who intend to major in mathematics, a physical science, engineering, or another technical field. Emphasis is on learning applications and techniques. Courses 161–162 must be taken in sequence. (Fall and Spring)

MTH 163 Multidimensional Calculus. This extends the calculus techniques to handle functions of more than one variable. It also concentrates increasingly on the geometric aspect of calculus, which is particularly important for applying calculus to problems in physical sciences and engineering. This course is open to first-year students with two semesters of advanced placement credit. Prerequisite: MTH 162. (Fall and Spring)

MTH 164 Linear Algebra with Differential Equations. This course provides an introduction to the basic concepts of linear algebra and ordinary differential equations. It spends about two thirds of the semester covering linear algebra up through eigenvectors and eigenvectors and one third of the semester covering elementary methods involved in solving linear differential equations and systems with constant coefficients. This course is open to first-year students with two semesters of advanced placement credit. Prerequisite: MTH 162. (Fall and Spring)

MTH 171–174 Honors Calculus I; II; III; IV. This sequence is an honors calculus sequence for talented students interested in mathematics or its theoretical applications to other fields. The sequence emphasizes the theoretical understanding of calculus in addition to teaching technical skills. Students completing the sequence will have acquired a deep understanding of the subject. The sequence satisfies all the basic mathematical prerequisites for majors and minors in mathematics, physics, and engineering. These include single variable calculus (MTH 161–162), multivariable calculus (MTH 164), differential equations, and linear algebra (MTH 165, 235). Each semester of the sequence is granted 5 credit hours rather than 4. Courses MTH 171–174 must be taken in sequence. MTH 171 is offered every fall. Students interested in taking MTH 171 should discuss their plans with a departmental representative from mathematics.

MTH 180 Topics in Problem Solving. This course is intended for students interested in developing problem-solving skills in mathematics. This course also prepares students for college-level mathematical competitions such as the Putnam.

For More Information
Please visit the mathematics program website at www.math.rochester.edu/ or schedule an appointment with a mathematics faculty member.

MECHANICAL ENGINEERING

“I believe, of course, in giving to all the people a good education. But the education must contain much besides book-learning in order to be really good”
—Theodore Roosevelt (“Citizenship in a Republic,” April 23, 1910)

Information about the Department
The mechanical engineering curriculum provides a balance of courses in the humanities and social sciences, physics, applied mathematics, and engineering principles and design. Since modern engineering is increasingly reliant on computers for things such as computation, data storage and retrieval, visualization of complex engineering problems, laboratory instrumentation, and presentation of project results, we have included computer work throughout the
curriculum. Emphasis is placed on the underlying fundamentals in the required engineering coursework, enabling graduates to adapt throughout their careers to rapid advances in science and technology. Training in the design process is increasingly emphasized in the later years of the program. The capstone senior design sequence often features real design problems drawn from local industry. Design examples include wind turbines for third-world installation, automotive fuel valves, large optomechanical mirrors for solar power, automotive frames and suspensions, 3D printing of optics, heat transfer in organic farms, sustainable industrial refrigeration, and injection molding machines.

The overall educational objective of our program is to develop effective practitioners in mechanical engineering and associated fields. Our graduates will confidently apply knowledge in the basic sciences, mathematics, engineering analysis, computation, experimentation, and design to address emerging and evolving engineering challenges. They will contribute to the advancement of their chosen field while remaining mindful of the ethical, safety, and social implications of their work. They will be able to communicate effectively and work in multidisciplinary teams and will be well equipped for leadership roles in industry, academia, and government.

In keeping with the continuously evolving nature of mechanical engineering, we expect that our alumni will engage actively in lifelong learning and professional development activities, and that many of them, inspired by research experiences as undergraduates, will continue their education in advanced degree programs.

**Departmental Advice for First-Year Students**

Mechanical engineering requires a solid foundation in mathematics, physics, and chemistry. This is built during the first two years of the program while students also take a first set of core mechanical engineering courses. In the second two years of the program, students take an increased number of mechanical engineering specialty courses, including many with an open-ended design component. To provide the breadth of knowledge required to address modern engineering questions, this science and engineering focus is also balanced in the curriculum by a selection of humanities and social science courses.

Many undergraduates in the department assist faculty members in research projects during the academic year and the summer. Recent projects involving undergraduates include experiments in controlled nuclear fusion using high-power lasers, fuel cells, engineering coolants and lubricants, micro fluids, MicroElectro-Mechanical Systems (MEMS) and Micro-Optical Electro-Mechanical Systems (MOEMS), precision engineering and instrumentation, precision grinding tools, CNC machining, optical manufacturing, experimental observation of collective phenomena in fluids, edge strength testing of screens for smart devices, structural mechanics of historical structures, bubble dynamics, and the design of an automatic transmission for a bicycle.

Many of our students interact with local companies like Harris, Xerox, Wegmans, General Motors, Bausch and Lomb, OptiPro, and Gleason Works. This often occurs through company sponsorship of a project in one of the design or laboratory courses. Our "Industry Practicum" program provides part-time work during the academic year and full-time employment during the summer for selected students. Major University facilities such as the Laboratory for Laser Energetics and Strong Memorial Hospital are also sources for design and internship opportunities.

We encourage our students to study abroad, typically for one semester in the junior year. Study abroad credits transfer to the undergraduate major in mechanical engineering, and instruction can be in English. Examples of study abroad sites, among many others, are Australia, Spain, England, Botswana, New Zealand, and Israel.

**Typical First-Year Program**

**Fall Semester**

- MTH 141 or MTH 161
- CHM 137
- Technical elective
- (EAS 10X recommended)
- WRT 105 or elective

**Spring Semester**

- MTH 142 or MTH 162
- PHY 121
- ME 120
- WRT 105 or elective

**Courses**

(Mechanical engineering courses available to first-year students)

**EAS 104/ME 104 The Engineering of Bridges.** An introduction to the art of bridge building based on the study of the engineering and technological problems involved in the design, construction, and collapse of bridges from antiquity to the present time. The course includes several case studies of major historical bridges selected for their structural significance. Students learn how to calculate the forces acting on structural elements, how these forces depend on the bridge structural form, how the form itself is conditioned by the structural materials, and how forces are measured with electromechanical instrumentation. The study includes fundamental notions of mechanics, strength of materials, structural behavior, instrumentation failure analysis, and design optimization. Working in teams, students use constructive experimental models as well as computer-aided programs to design, build, instrument, and test realistic bridge projects. This is a self-contained course open to all Rochester undergraduates. (Fall)

**ME 110 Introduction to Computer Aided Design and Drawing.** The course is designed to give first-year students interested in technology an introduction to reading and creating engineering drawings on a state-of-the-art computer-aided design system. The students also get exposure to manufacturing techniques, including a tour of a manufacturing facility. The course may be used for clusters in Design with Materials and Engineering Design. (Fall and Spring) (2 credits)

**ME 120 Engineering Mechanics I Statics.** This course covers the concepts of force and moment and their transmission in engineering structures such as trusses, frames, machines, and beams. Examples and applications range from machines to biomechanical structures. The course may be used for clusters in Biomedical Engineering, Engineering Design, Force and Motion, General Science, Mechanics, and Modern Technology. (Fall and Spring)

**ME 106 Engineering in Antiquity.** The application of engineering principles and technology to the design and performance of engineering structures from antiquity to the preindustrial world. The course combines literary, archaeological, and engineering evidence. We apply basic engineering principles (transfer of forces,
momentum, and energy), study primary texts in translation, and examine existing structures and designs. Topics include evolution of engineering and engineered materials (metals, wood, stone, marble, glass, concrete, composites) and their limitations; Bronze Age fortifications; structural design of ancient temples; Roman aqueducts, siphons, and vaulted structures; engineering structural materials, stresses, and failure; lifting devices; construction engineering; columns, beams, vaults, trusses, frames; instruments of warfare, ballistics, and sea transport. (Spring)

For More Information
Please visit the mechanical engineering program website at www.me.rochester.edu/.

MEDIEVAL AND EARLY MODERN STUDIES
(MULTIDISCIPLINARY STUDIES CENTER)

Information about the Program
The minor in medieval and early modern studies enables students to pursue a program in the historical and cultural production of Europe and the Mediterranean from the fall of the Roman Empire and the rise of Islam to the mid-17th century. This period comprises distinct thematic continuities understood to be post-classical and pre-Enlightenment, and the program is intended to be multidisciplinary.

The medieval and early modern studies minor requires six courses, one of which must be Classical and Scriptural Backgrounds. At least three of the six courses should be at the 200 level or above. A maximum of four courses may be taken from any one academic department, and at least four of the six courses for the minor need to be in either the humanities or social sciences division.

Courses

AH 101 Introduction to Art and Visual Culture. (Humanities)
This course is designed to introduce the student to aspects of the history of Western painting, sculpture, and architecture from the Renaissance through the present. We examine the various schools and movements in their historical contexts while paying particular attention to the histories that bear upon them, such as the influence of the classical past, religion, gender, political power, and the rise of the artist. The course, therefore, attempts two goals: one, to familiarize students with the principal monuments of the Western tradition from about 1400 onward, that is, the paintings, sculptures, buildings, and artifacts that form the substance of this narrative; two, to develop visual literacy, that is, the ability not only to identify but also to discuss artworks in a way that develops critical competence and an understanding of how the Western tradition of art has come about. (Fall)

ENG 112 Classical and Scriptural Backgrounds. (Humanities)
This course addresses the Big Questions: Love, Death, War, Sex, Law, and more besides. We come to our readings through myth and history, art and philosophy, and a series of broad conceptual frameworks. Above all, however, this is a course in literary appreciation and influence: we read extensively in Homer and Virgil, in dialogues by Plato, in a broad selection of Greek tragedy (and one comedy!), and in a generous selection from Hebrew and Christian scriptures. We try to do justice to these texts in their own distinctive terms, but we strive as well to see why readers before us have prized them so highly for thousands of years, and how we are to make sense of them in the 21st century. First-year students welcome! (Fall)

ENG 113 British Literature I. (Humanities)
This course immerses students in the most challenging, influential, and engaging writings from the earlier periods of English literature. Our aim is to enjoy and understand these writings in themselves and then to see their relation to each other and to their larger historical context. Students should leave the course with some real affection for particular writings and some assured sense of the contours and highlights of cultural history. Our emphasis is on the careful appreciation of language and texture in representative texts and authors (including Chaucer, Spenser, Shakespeare, Donne, Jonson, Milton, Dryden, Swift, Pope, and their contemporaries). Class proceeds by lecture and discussion. (Fall)

REL 101 Introduction to the Old Testament. (Humanities)
Examination of the texts of the Hebrew Bible (Old Testament for Christians) in their religious, historical, and literary contexts. In this course, students learn the history of the ancient Israelite people from their origins down through the post-Exilic period. Study of the texts of the Hebrew Bible (Old Testament) enable us to explore what we can know about ancient Israelite society and culture, the rise and fall of Israel as a nation-state, religious and theological debates about the role of God in shaping history, and the problem of suffering, as well as the writing of the biblical texts and the development of the canon. (Fall)

Note: The following courses may have appropriate content but have not been officially approved for the medieval and early modern studies minor. Please see one of the faculty advisors for approval.
IT 197 The Divine Comedy of Dante Alighieri: Discover the Wonders of a Mediaeval Mind. (Humanities) The course approaches The Divine Comedy both as a poetic masterpiece and as an encyclopedia of medieval culture. Through a close textual analysis of selected cantos from Inferno, Purgatorio, and Paradiso, students learn how to approach poetry as a vehicle for thought, an instrument of self-discovery, and a way to understand and affect the world. (Fall)

HIS 127 Foundations of Medieval France. (Social Sciences) This course provides an introduction to the study of history through an investigation of “the long 12th century” in France, using both primary and secondary source materials, discussion, analytic reading and good practice of the writing of history. (Fall)

Spring Semester
For information on spring course offerings, please visit the medieval and early modern studies web page.

Consult the medieval and early modern studies program website at www.rochester.edu/college/msc/medievalminor.html.

MODERN LANGUAGES AND CULTURES

“What sets worlds in motion is the interplay of differences, their attractions and repulsions. Every view of the world that becomes extinct, every culture that disappears, diminishes a possibility of life.”
—Octavio Paz

“He who does not know foreign languages does not know anything about his own.”
—Johann Wolfgang von Goethe

“A different language is a different vision of life.”
—Federico Fellini

Information about the Department
International and multicultural by definition, the Department of Modern Languages and Cultures offers courses in many of the world’s major languages, literatures, and cultures and in comparative literature and theory. In MLC—as the department is commonly known around campus—students can major in French, German, Japanese, Russian, Spanish, or comparative literature. Students interested in Chinese or Italian may create an interdisciplinary concentration through the Multidisciplinary Studies Center. Additionally, MLC is in the process of introducing new programs of language study. For 2017–18, MLC will offer elementary and intermediate levels of Korean and Portuguese.

All MLC majors and minors (except Japanese) begin counting courses toward the major with 151, the third semester of study, following 101–102. A major in a modern language field entails the study of a national culture, literary traditions and innovations, and, of course, language. Students with an interest in a modern culture or language can also choose to minor in any of the above fields, including Italian and Chinese. There are also several possibilities for interdisciplinary work in other languages and cultures: Russian studies (a major and a minor), Latin American studies (a minor), and certificates in Asian studies, literary translation studies (LTS), and Polish and Central European studies.

Students with an interest in national literatures and cultures will find courses taught in English under the comparative literature (CLT) rubric (for example, RUS 231/CLT 255A Great Russian Writers). Courses in comparative literature and cultural theory examine the politics, philosophy, history, and general cultural context of works of art, cinema, theater, popular culture, and literature. CLT courses encourage interdisciplinary work, especially with African and African-American studies; art history; film and media studies; gender, sexuality, and women’s studies; history; Jewish studies; and religion and classics. The major and minor in comparative literature offer an opportunity to compare and contrast theories of literature and culture in a global context. MLC welcomes students with primary interests in fields other than literature, whose diverse backgrounds and viewpoints enrich our exploration of interdisciplinary and cross-cultural studies.

Departmental Advice for First-Year Students
The study of languages and cultures opens minds and attitudes and enables people to break down boundaries in daily life, business, science, and the arts. In MLC, you can begin study of a modern language, continue work in a language you have studied elsewhere, or pursue advanced studies in the literatures and cultures of the world. The department also encourages you to make use of the diversity of its offerings to enhance your studies in other fields. Language advisors can help you design a program of study in language, literature, and culture that fits your particular interests. If you major in biology, English, political science, or any of the College’s diverse programs, MLC has courses that add to your program of study.

The fall semester is the best time to begin or to continue with the study of a language and culture, as all the national programs in the department offer elementary and intermediate courses at the start of the year. Students with no previous experience in a particular language may enter any 101 course; placement is necessary for all other language courses and levels. The 101 and 102 undergraduate
courses constitute the first year of language study. Courses numbered 151–153 are at the intermediate or second-year level. Courses at the 200 level require placement as well.

For Students with Previous Language Training
The College Board Subject Test Advanced Placement scores or International Baccalaureate rankings assist departmental advisors in finding the right course level for you. Information on how you learned the language or languages you know will also help us advise you on the most appropriate courses for you in the Department of Modern Languages and Cultures. The first step is to take the online placement exam for Chinese, French, German, Russian, or Spanish. (For Italian, Japanese, Korean, and Portuguese, contact the particular program’s advisor.) For the online placement exams in Chinese, French, German, Russian, or Spanish, you will receive a score that will be used along with the survey information you provide and with any AP or IB scores you have submitted that will help determine your placement in a specific language course. Please note that any semester placement you may receive with your online numerical test scores are not University of Rochester placement rubrics. For Italian, you should discuss your score with the undergraduate advisor in the program.

Advanced Placement (AP)

French—AP score of 5: Students will be placed by the department into FR 200 Advanced French. Four credit hours will be granted upon completion of FR 200 with a grade of B+ or better.

German—AP 4: Students will be placed by the department into 152 or 200. Credit is granted for 151 upon completion of 152 with a grade of B or better. Credit is granted for 151 and 152 upon completion of 200 with a grade of B or better.

German—AP 5: Placement into 200. Credit for 151 and 152 is granted upon successful completion of 200 with a grade of B or better.

Spanish—AP score of 4: Students will be placed by the department into SP 152. Credit is granted for SP 151 upon completion of SP 152 with a grade of B+ or better.

Spanish—AP score of 5: Placement into SP 200. Credit for SP 151 and SP 152 is granted upon successful completion of SP 200 with a grade of B+ or better.

International Baccalaureate (IB)

Foreign Language

IB higher-level 5: Students are placed into 152 and are awarded credit for 151 after completion of 152 with a grade of B or better.*

IB higher-level 6: Students are placed into 200 and are awarded credit for 151 and 152 upon completion of 200 with a grade of B or better.*

IB higher-level 7: Students are placed into 200 and awarded credit for 151 and 152 upon completion.*

MLC Clusters
Completion of a cluster of three courses in MLC fulfills the humanities requirement for graduation. In addition, Russian studies offers several humanities and one social sciences cluster. Each language program in the department offers clusters at the beginning, intermediate, and advanced levels, as well as others based on specific topics or themes, so any course you choose in MLC will fit into one or more clusters. Comparative literature and the national language programs offer clusters focusing on literary studies, cultural theory, and interdisciplinary topics. A few examples are Modern French Thought, Italian Culture and Civilization, Germany before Nazism, Japanese Popular Culture, Russian Literature and Culture, and Literature and Identity in Hispanic Societies. Some of these are interdepartmental and include MLC courses plus offerings in history; art and art history; music; anthropology; film and media studies; and gender, sexuality, and women’s studies. A couple examples are Introduction to European Studies and Continental Philosophy.

Special Opportunities: Study Abroad
MLC strongly encourages students to take advantage of the many opportunities for study abroad in a variety of places around the world. There are opportunities to take classes abroad or to do internships related to one’s interests. Returning study abroad students consider the time spent in another country as one of the most exciting and challenging experiences of their undergraduate education. The College sponsors several University of Rochester programs and is affiliated with others, such as the Paris Film Program; the IES programs in Salamanca, Granada, Barcelona, and Madrid; in Paris and Nantes; the St. Petersburg CIEE program; and the IES programs at several universities in China and Japan. MLC also offers a one-semester, interdisciplinary program in Italian studies in Arezzo, Italy. This program is directed by College faculty and administered through the Center for Education Abroad.

MLC-sponsored summer programs take students to France, Germany, Italy, Russia, and (in even-numbered years) a Spanish-speaking country. You do not have to major in a modern language in order to participate in these programs, but it is important to plan in advance with an MLC advisor for your field of interest. Advisors in each of the language programs help students pick the study abroad offerings best suited to their interests and language abilities. MLC also sponsors a yearlong exchange program with the University of Cologne and the University of Rennes. University of Rochester financial aid is transferable for many study abroad and internship opportunities. Through MLC, students taking courses in the department may also apply for a Mildred R. Burton Undergraduate Travel/Research Fellowship. Each year, many students are awarded fellowships to use toward our study abroad programs.

Courses
The Department of Modern Languages and Cultures currently offers introductory through advanced courses in Chinese, French, German, Italian, Japanese, Russian, and Spanish, as well as introductory and intermediate courses in Korean and Portuguese. This enables students to begin a new language or continue in a familiar one beginning with their first semester. Other courses, such as those listed here, provide more-advanced studies of other literatures and cultures.
Spring courses have yet to be determined. The following courses are taught in English and have no prerequisites:

**CHI 211/CLT 111/CLT 201 Premodern Chinese Literature.**
In this survey we read major authors, works, and literary genres of Chinese literature before the 20th century, with attention to several central and intertwining themes: literature and the spaces of the imagination; the experience of the past and the subversion of tradition; changing relations between fiction and history; the reimagining of gender relations through the retelling of narratives; and the emergence of a vibrant urban culture. No background in Chinese literature is required or assumed. (Fall)

**CHI 221/CLT 269 Laborers, Sojourners, Immigrants: Chinese Journeys to the Americas.** This course focuses on the wide variety of trajectories and circumstances that brought Chinese persons to sites throughout the Americas—e.g. the US, Canada, Mexico, Cuba, Peru—in the 19th and 20th centuries and the vastly different realities that awaited them in different locations and in different eras. Together, we look at the historic socio-economic factors that spurred these voyages, the experiences of those who underwent them, and the lasting impacts Chinese communities have had on the locations in which they arrived. We also explore the development of immigration-related legislation in the Americas and its impacts on migrant and minority communities. Readings are drawn from a variety of nonfictional sources. Taught in English. (Fall)

**CHI 237/AH 202/FMS 296 Chinese Film.** This course presents an overview of cinema in China, Taiwan, and Hong Kong from the 1930s to the present, considering how cinema has served a means of representing and reshaping Chinese historical identities and everyday life at home and abroad. We approach film as a mixed medium of narrative, image, and sound and focus on how it represents the spectacle of modern China by mediating among recurring issues of modern (especially urban) life, the persistence of the past, the relations of place to Chinese and global culture, and the staging of these questions through issues of gender and ethnicity. Throughout, we pay close attention to the interaction of themes, narrative genres (such as melodrama), formal techniques, and cultural and social context. (Fall)

**FR 243/CLT 221/AAS 244/GSW 244 Mutilated Bodies.** Female genital cutting encounters vaginal cosmetic surgeries at the intersection of poverty and wealth, race and class, barbaric practices and the pleasure principle. Bodies of poor, African, and mostly black women and children embody a fateful condition that can be redeemed by technologies of progress and humanitarian discourses. This course invites students to challenge assumptions related to agency, race, class, the representation of the body, and the fragmented transnational sisterhood. The discussion expands to bodies caught in domestic violence, rape, lynching, and skin whitening. (Fall)

**GER 261/CLT TBA The Promise of Cinema: Weimar Film and Film Theory.** The Weimar Republic (1919–33) was a period of great economic and political instability for Germany, as well as immense creativity and experimentation. Some of the most enduring and influential films of Western cinema, such as The Cabinet of Dr. Caligari and Metropolis, were created in this environment. At the same time, there was great debate about this emerging medium and its status as art as well as its potential to further social and political change, questions that continue to be explored in film theory and film studies more generally. This course looks at the paths taken, experiments that were ultimately deemed successful as well as those that were less so but nevertheless compelling, in this search to realize film’s artistic and social potential. All readings and films are in English. (Fall)

**GER 262/CLT TBA Strangers.** This course explores the importance of strangers to our understanding of ourselves and others. Some key questions we examine are: What is a stranger and who decides who is a stranger? How do we use the notion of stranger to define difference, assimilation, individuality and other topics that affect our daily lives? What are the politics and ethics of these definitions? We look at a wide range of fictional texts, films (both documentary and fictional), and theory. All readings and films are in English. (Fall)

**GER 284/CLT 212M/FMS 290 Introduction to East German Cinema.** This course explores major developments in the East German cinema, including issues such as coming to terms with the fascist past, popular filmmaking and art cinema, cinema as a pedagogical tool, artistic dissent and state censorship, socialist ideologies of gender, and the politics of documentary. Each film is explored in relation to its socio-historical context, providing students with an overview of East German film and culture. (Fall)

**IT 197/225/CLT 118/253F/ENG 206/HIS 135/REL 193/REL 282 The Divine Comedy of Dante Alighieri: Discover the Wonders of a Medieval Mind.** The course approaches The Divine Comedy both as a poetic masterpiece and as an encyclopedia of medieval culture. Through a close textual analysis of selected cantos from Inferno, Purgatorio, and Paradiso, students learn how to approach poetry as a vehicle for thought, an instrument of self-discovery, and a way to understand and affect the world. They also gain a perspective on the Biblical, Christian, and Classical traditions as they intersect with the multiple levels of Dante’s concern ranging from literature to history, from politics to government, from philosophy to theology. Lectures and class discussion are complemented by a weekly recitation session. Intensive class participation is encouraged. (Fall)

**IT 248/CLT 213B/FMS 285/HIS 286 Modern Italy through Film.** Taking the inspiration from Martin Scorsese’s anthological film My Voyage to Italy, the course focuses on a few momentous episodes and phenomena of Italian political, social, and cultural history as portrayed and interpreted in film. We discuss aspects of Risorgimento, Fascism, the World Wars and their aftermath, the culture of individual cities, the contrast between North and South, the condition of women, emigration and immigration, power and repression, spirituality, and secularism. Among the major film directors, we include Rossellini, Visconti, Fellini, Olmi, and Bertolucci. The analysis of the movies is integrated with readings from the fields of history, literature, criticism, and theater. A glance at Verdi’s operas of the 19th century and at the tradition of social song as it develops in the postwar period complements the course. (Fall)
JPN 214/JPN 214W/CLT 214M/CLT 214W/ENG 259/FMS 299 Atomic Creatures: Godzilla. A focused study of Godzilla on film, beginning with the 1954 film that inspired and helped define the Japanese *kaiju eiga* genre. The larger context of the course is a critical investigation of genre film, specifically the science-fiction/horror/creature-feature film, and a careful consideration of the “culture of war” (World War II through 21st century). We begin with a sampling of seminal non-Japanese titles that provided the foundation for the Godzilla film paradigm and then focus on a close textual study of select “Godzilla films” that help us understand the historical and social contexts for Godzilla’s erratic trajectory since 1954. Recent DVD releases with both dubbed and original Japanese language versions enable us to dissect the culturally generated permutations of *kaiju eiga*. (Fall)

JPN 227/CLT 227/GSW 220 Body Politics: Negotiating Public and Private Discourses of the Body in Japanese Culture. This reading-intensive course is centered on public and private discourses of the body in contemporary Japan. Topics include but are not limited to gender and sexuality, reproductive rights and motherhood, body image and beauty standards, youth and old age, masculinity and femininity, and health and disease. Through the conduit of journal articles, films, autobiographical essays, fiction, manga, and scholarly critiques, this course exposes students to a variety of rhetorical strategies and popular mediums concerning the body in Japan. In addition, this course enriches students’ understanding of issues facing contemporary Japan and the ways in which we read and write about the body. (Fall)

JPN 231/CHI 231 Asian Calligraphy: History and Practice I. An introduction to the Chinese and Japanese writing systems, including their historical development, artistic practices, and practical applications. This entails the study of kanji (Chinese characters) as well as the meanings of the kanji. One class meeting per week is devoted to the study of calligraphy. Ideal for those studying Chinese or Japanese, but experience in the languages, while helpful, is not required. Please note that students must provide their own Asian calligraphy equipment for practicing kanji and completing weekly assignments. (Fall)

JPN 257/CLT 254D Fear and Loathing in Tokyo: Japanese Mystery Fiction. This course explores literary evocations of the fears and concerns afflicting Japanese society as reflected in narratives of murder, mystery, and mayhem. Against the Tokyo cityscape, literary characters in such works frequently struggle to find meaning in lives that, since the economic and social collapse of the late 1990s, seem quite meaningless. They turn to drugs, prostitution, and even murder. These narratives are not about such experiences, per se, but rather the impetus behind them. In this course, we delve into the seedy underbelly of Japanese literature to explore the method behind the madness. As we do so, we ask what these grimy narratives tell us about contemporary Japan, Tokyo, gender and sexuality, and survival. Students leave the course with an understanding of how literary works give voice to social issues as well as the ways in which narrative dynamics contribute to a greater understanding of and appreciation for literature itself. (Fall)

JPN 294/JPN 294W/CLT 210/CLT 210W/ENG 258/FMS 207 Hayao Miyazaki and Planet Ghibli. This course offers 1) a comprehensive “grass roots” study of anime as film form and cultural phenomenon; and 2) a more specific and guided investigation of the work of Hayao Miyazaki and the worldview and visual sensibilities of his creation, Studio Ghibli. We begin by investigating where anime comes from: historical precedence, significant sources, defining influences, and routes of cultural exchange. We then focus on Miyazaki’s work and the Ghibli corpus in order to examine the specifics of animated cinematic construction that distinguish his work (e.g., iconography, visual landscape, character design, narrative tropes, music); methods of adaptation, influence, and genre variation; reception and fan culture; and anime’s potential for providing unique perspectives on race, gender, landscape, identity, and Japan’s historical and mythological past. (Fall)

RST 126/RUS 126/HIS 134 Russia Now. Students follow current events in Russia through the Internet, newspapers, magazines, and other sources (including satellite broadcasts when available). Along with a general attention to current events, each student follows a particular area of interest (e.g., national identity, the market economy, politics, health issues, crime, culture, foreign policy) throughout the term, does background work on this topic, and writes it up towards the end of the term. Students who read Russian are encouraged to use available sources in that language. This course is designed to 1) familiarize students with the most important issues facing Russia today and the historical/political/cultural context in which to place them, and 2) acquaint students with a variety of resources from the United States, Russia, and a number of other countries and the different perspectives these sources may give on one and the same issue. Students write two short essays and one longer research paper. (Fall and Spring) (4 credits)

RST 127/RUS 127 Russia Now. In this 2-credit version of the Russia Now course, students follow current events in Russia through the Internet, newspapers, magazines, and other sources. Along with a general attention to current events, each student follows a particular area of interest (e.g., national identity, the market economy, politics, health issues, crime, culture, foreign policy) throughout the term, does background work on this topic, and writes it up towards the end of the term. Students who read Russian are encouraged to use available sources in that language. This course is designed to 1) familiarize students with the most important issues facing Russia today and the historical/political/cultural context in which to place them, and 2) acquaint students with a variety of resources from the United States, Russia, and a number of other countries and the different perspectives these sources may give on one and the same issue. May be taken twice for credit. (Fall and Spring) (2 credits)

RST/CLT/FR/GER/IT 160 The New Europe. One class each week looks at the postwar rise of the European Union and the extent to which it has successfully united a majority of European countries and created a new, postnational European identity. The other weekly class follows current events in a Europe that stretches from the Atlantic coast eastward to the Ural Mountains of Russia and comprises more than forty nations, each of which has its own "brand" based on a complex mix of historical, geographical, economic, and cultural factors. In English. (Fall)
RUS 235/CLT 259/RST 235 Tolstoy’s War and Peace. A semester-long exploration of one of the most important novels in Western literature. To help guide our reading, we analyze two important early short works by Tolstoy on the themes of war and peace. We also read excerpts from historical and biographical accounts. We pay close attention to the novel's meditation on the relationship between fact and fiction in works of historical literature; its preoccupation with theories of history; its subversion of historical narratives; its various philosophical and moral propositions; and its unique contribution to the Russian idea of literature's role as a kind of textbook for how we should live. We also view Russian, American, and British attempts to film the novel. In English. (Fall)

RUS 240/CLT 250/ENG 243 Nabokov. A survey of the writer’s Russian and American works and his contribution to world literature. Reading his most renowned novels, we acquire an understanding of Nabokov’s style, philosophy, and ethical principles. Our discussions address his ideas of life and death, space and time, regularity and chance, as well as such issues as otherness, individual freedom, and independent thinking. We also analyze Nabokov’s artistic discourse as we attempt to assess his legacy: was he a trickster, as some critics describe him, or a deep thinker and brilliant stylist, as others argue? As an American college professor, whose lectures have been published, how did the author himself think literature should be taught? In English. (Fall)

SP 255/CLT 246C/HIS 255 1492 and Beyond: Identity, Culture, and Society in Colonial Latin America. This course examines the writings of Spanish American residents from 1492 through the end of the 17th century. By focusing on conquerors, nuns, and indigenous intellectuals, we analyze the uses of literature as history and vice versa within the context of colonial rule in the Spanish-speaking Caribbean, Mexico, Peru, and other spaces. A broad range of sources such as journal entries, poems, and chronicles (among others) inform our understanding of colonial religion, society, identity, and politics. Coursework consists of several short papers, a research paper, student presentations, etc. Course in English. Students taking the course for Spanish credit must have taken SP 200 and will do some reading and most of the writing in Spanish. (Fall)

Intermediate and Advanced Language and Conversation Courses

CHI 113 Introduction to Classical Chinese (Fall)
CHI 114 Conversational Chinese I (Fall)
CHI 115 Conversational Chinese II (Spring)
CHI 116 Introduction to Classical Chinese II (Spring)
CHI 151 Intermediate Chinese I (Fall)
CHI 152 Intermediate Chinese II (Spring)
CHI 202 Advanced Intermediate Chinese I (Fall)
CHI 203 Advanced Intermediate Chinese II (Spring)
CHI 205 Advanced Chinese I (Fall)
CHI 206 Advanced Chinese II (Spring)
FR 153 Intermediate French (Fall and Spring)
FR 154 French in Screen Shorts: Intensive Intermediate French (Summer)
FR 155 French Conversation and Composition (Fall and Spring)
FR 200 Advanced French (Fall and Spring)
FR 211 Aspects of French Grammar (Fall)
GER 151 Intermediate German I (Fall)
GER 152 Intermediate German II (Spring)
GER 200 Advanced German Conversation and Composition (Fall)
IT 114 Conversational Italian (Fall and Spring)
IT 151 Intermediate Italian I (Fall)
IT 152 Intermediate Italian II (Spring)
IT 200 Advanced Italian Composition and Conversation (Fall)
JPN 114 Intermediate Conversational Japanese I (Fall)
JPN 115 Intermediate Conversational Japanese II (Spring)
JPN 151 Intermediate Japanese I (Fall)
JPN 152 Intermediate Japanese II (Spring)
JPN 201 Advanced Intermediate Japanese I (Fall)
JPN 202 Advanced Intermediate Japanese II (Spring)
JPN 203 Advanced Conversational Japanese I (Fall)
JPN 204 Advanced Conversational Japanese II (Spring)
JPN 205 Advanced Japanese I (Fall)
JPN 206 Advanced Japanese II (Spring)
KOR 114 Intermediate Korean I (Fall)
KOR 151 Intermediate Korean II (Spring)
KOR 201 Advanced Intermediate Korean I (Fall)
KOR 202 Advanced Intermediate Korean II (Spring)
POR 151 Intermediate Portuguese I (Fall)
POR 152 Intermediate Portuguese II (Spring)
RUS 110 Conversational Russian (Fall)
RUS 151 Intermediate Russian I (Fall)
RUS 152 Intermediate Russian II (Spring)
RUS 202 Advanced Readings in Russian I (Fall)
RUS 205 Advanced Readings in Russian II (TBD)
RUS 209 Advanced Russian through Film (TBD)
SP 151 Intermediate Spanish I (Fall and Spring)
SP 152 Intermediate Spanish II (Fall and Spring)
SP 200 Advanced Spanish Composition (Fall and Spring)

Please visit the modern languages and cultures program website at www.sas.rochester.edu/mlc/.
“The man that hath no music in himself Nor is not mov’d with concord of sweet sounds, Is fit for treasons, stratagems, and spoils; The motions of his spirit are dull as night, And his affections dark as Erebus. Let no such man be trusted.”

—William Shakespeare

Information about the Department

Students from all disciplines may participate in the pleasures of musical study and performance to acquire a deeper understanding of the many ways music reflects values of various cultures, influences lives, and enriches human existence. The Department of Music in the College offers courses of study leading to the BA degree with a major, a minor, and six clusters in music. Numerous varied courses address non-majors who wish to study music on an introductory, interdisciplinary, or aesthetic basis. Degree programs, course offerings, and performance opportunities in music are diverse and invite choice and flexibility. Courses offered at the Eastman School of Music, normally open to any student presenting the proper prerequisites, augment the range and depth of musical experiences and courses available to students in the College.

Full-time, matriculated undergraduate students who pass an entrance audition may take applied music lessons at Eastman. See Departmental Advice for First-Year Students, below, about applying and auditioning for lessons; interested students should visit www.esm.rochester.edu/lessons and sign up for an audition, preferably before August 15. Students with questions about the audition process for lessons should contact Jimmy Warlick, the performance program manager in the music department. Beginning music lessons are available without credit and for a fee through Eastman's Community Auditorium during first-year student orientation week. For audition information, music department website. This brief assessment is held in Strong Auditorium during first-year student orientation week.

Students interested in registering for a music theory course should take the theory placement assessment administered (one time only) during Orientation. Although no RSVP is required, more information about the placement exam can be obtained by contacting Jimmy Warlick in the music department or checking the music department website. This brief assessment is held in Strong Auditorium during first-year student orientation week.

Students who read music and perform at an intermediate level can audition for applied music lessons by visiting www.esm.rochester.edu/lessons and signing up for an audition prior to the first week of classes. Note to brass musicians—unlike other instrumental areas, the brass auditions include musical excerpts to be prepared in advance. Please contact the performance program manager in the music department to obtain PDF files of the required excerpts.

The BA with a Major in Music

The College’s Bachelor of Arts degree in music addresses students who can meet both the intellectual and musical challenges of a rigorous program that emphasizes the broad experience of a liberally educated person. The concentration comprises a balanced program of academic courses, private instruction, and ensemble experience that fosters understanding of musical languages, historical developments, and compositional styles while encouraging excellence in performance.

Students may choose from among eight individual “tracks” of study with the core curriculum in music theory and history, included in all tracks, providing the common foundation for advanced study of specialized subfields in music (musicology, theory, conduct-
ing, management, performance, composition, music education, etc.) both as emphases in the final years of undergraduate education and at the graduate or professional level. Majors wishing to pursue something other than the basic track can choose an alternative track in composition, conducting music history/theory, music in world cultures, musical theater, performance, and popular music/jazz.

Any student interested in a 3-2 program in ethnomusicology should contact Professor Jennifer Kyker. Students interested in the BA/MA combined program with certification in music education should contact Christopher Azzara at the Eastman School of Music during Orientation or soon afterward. Both options are offered in conjunction with the Eastman School.

Although the major in music is a demanding one, students often also explore, beyond the introductory level, one or more non-music disciplines. Some students pursue a double major. Such flexibility allows students to combine pre-law or pre-medicine preparation with a major or minor in music.

First-year students who plan to major in music should take the theory placement assessment to determine appropriate placement in the theory curriculum. Prospective majors should also audition for applied music lessons and an ensemble.

**Advanced Placement (AP)**

Students who have taken the Advanced Placement examination in Music Theory and earned a score of 4 or 5 can receive advanced placement credit for the course MUR 110.

**Music Clusters**

Students whose major is in the social sciences or natural sciences and engineering divisions are invited to pursue one of the six music clusters:

- **Music Theory (H1MUR001)**
  Grammar and syntax of Western music, including notation, harmony, counterpoint, and some composition.

- **Introduction to Classical Music (H1MUR013)**
  Explores Western art music from a variety of perspectives, including music theory, history, and performance.

- **Popular Music (H1MUR014)**
  Explores various styles and forms of popular music in Western culture.

- **World Music (H1MUR017)**
  An introduction to non-Western music.

- **Musical Styles and Ideas (H1MUR016)**
  A diverse array of repertories and approaches to the musical experience.

- **The Performing Musician (H1MUR011)**
  A hands-on approach to the experience of music.

---

**Courses**

**Applied Music Lessons.** Each year, approximately 250 non-music majors on the River Campus take private instrumental or vocal lessons for credit at the Eastman School of Music. All full-time, matriculated students who read music and perform at an intermediate level are eligible. During the semester, students meet with their instructors once each week, receiving collegiate credit for their lessons. The addition of the lesson to a normal 16-credit-hour semester schedule is not considered an overload.

**First-Year Students**

**Courses Open to First-Year Students—please review Course Descriptions/Course Schedules (CDCS) for other suitable courses**

**MUR 100 Experiencing Music.** A new approach to “music appreciation” that could be offered only at the University of Rochester, with its extraordinary musical resources, including nearly 800 concerts and recitals per year, a professional-quality recording studio, and the largest academic music library in the New World. This enjoyable course celebrates the “ears-on” experience of various aspects of musical performance and assumes no previous technical training in music. Participants develop listening skills through the enjoyment of live musical presentations, in-class performances, discussions with the performers and living composers, and guided listening sessions. Students attend some rehearsals and concerts, including at least one Rochester Philharmonic concert in Kodak Hall at the Eastman Theatre. Websites and other technological media also are used in lieu of text. (Spring, alternate years)

**MUR 101 Elements of Music.** A course for the student with no previous musical experience. Topics include notation, intervals, chords, and other basic concepts of tonal harmony, with application to the study of a wide range of styles, including popular idioms. Students should not be able to read music. Prerequisite for MUR 111. For the student with no previous musical experience. (Fall and Spring)

**MUR 103 Musical Adventures (Too Hip a Trip to Miss).** Back to Coolio—and lots of stops in between—this course explores the wonderful world of music. We’ll fill our backpack with a few essentials for our journey: some musical vocabulary and grammar. We’ll explore such questions as, “What is music?” and “Why do humans make it?” We’ll find out what one another of us thinks is musically “mint” and musically “gross” and why. We’ll explore the interesting world of musical sounds and styles of New Orleans, Chicago, and Harlem. From concert halls to church halls; from beer halls to dance halls, we’ll go in search of music. We’ll meet Dukes and Counts and Princes and Queens, royal and otherwise. And, because everyone has some spirit of invention, we may even try our hand at a little musical creation. Prerequisites: none. (Spring)

**MUR 104 Carillon.** Private carillon instruction, weekly 30-minute lessons or the equivalent. By audition only. Permission of instructor required. (2 credits)

**MUR 109 Musicianship I: Literacy Skills.** Extensive work with clefs, notation, intervals, and scales. Aural work through sight singing and dictation emphasizing melody and rhythm. Music-reading work emphasizes speed and fluency in recognizing structures in
We investigate the relationship of jazz to the following topics: new musical styles; other art forms; changes in American society; technological development; and the evolution of recording, broadcast, and news media. In doing so, we consider not only musicians who distinguished by their seminal and permanent influences, such as Louis Armstrong, Miles Davis, or Coleman Hawkins or shorter intense careers, such as Charlie Parker. Blues, ragtime, swing, bebop, cool, progressive, and free jazz are landmark terms. And finally, the study of musical history is enhanced by considerations from sociological, linguistic, and philosophical perspectives. The instructional format includes lectures, discussion, and intense emphasis on listening. This course is designed for students with little or no musical training. The coursework consists of assigned readings, listenings, brief written assignments, and two exams. Prerequisites: none.

MUR 122B History of Jazz II. This course focuses on jazz music and musicians in the latter half of the 20th century (ca. 1955–2000). We investigate the relationship of jazz to the following topics: new musical styles; other art forms; changes in American society; technological developments; and the evolution of recording, broadcast, and news media. In doing so, we consider not only musicians who first emerged as leaders during this period (Ornette Coleman, John Coltrane, Bill Evans, Herbie Hancock, Keith Jarrett, Chick Corea, Wynton Marsalis, John Scofield) but also those whose careers began earlier (Louis Armstrong, Dizzy Gillespie, Miles Davis, Gil Evans) and continued into the 1950s and beyond. We also examine how repertoire from previous historical periods came to be viewed by subsequent generations of musicians and listeners. The instructional format includes lectures and discussion along with in-class viewings/listenings of recorded performances. This course is designed for students with little or no musical training. The coursework consists of assigned readings, listenings, brief written assignments, and two exams. Prerequisites: none.

MUR 123 Music of Black Americans. This course studies the Black American Christian musical beginnings and includes forms of worship, early musical practices, the Spiritual, evolution of Gospel. An examination of ante-bellum musical activities follows, including secular song types, character of the folk music with respect to poetic and musical form, language, and themes. Attention is given to significant literary and aesthetic developments, especially during the Harlem Renaissance and the poetry of several writers of that era are surveyed. The course treats blues, its origins, and its evolution through the 1940s. Surveys of classical music forms from the 18th to mid-20th century; music of the theater from minstrelsy to Broadway; precursors of jazz, the syncopated dance orchestra and brass bands; early jazz to bebop round out the course offerings. (Spring only)

MUR 126 Opera. A small number of representative operas are used to highlight the history of this controversial 400-year-old art form and its creators, performers, and audiences. Drama, music, staging, spectacle, and dance are examined as components of production. Divas welcome. Prerequisite: ability to read music.

MUR 127 The Blues. See online course description for REL 151.

MUR 128 Women and Music. This course focuses primarily on women composers but also includes material on women as performers, patrons, and consumers, as well as consideration of the role that gender plays in the experience of music. Prerequisites: none.

MUR 111 Theory I. The first in a four-course sequence. Deals with basic elements of harmony, voice-leading, and analysis. Part-writing in chorale style teaches elementary aspects of tonal theory. Prospective music majors should begin their theory requirement with this course. Prerequisite: MUR 101 or 110; or permission of instructor (placement test). (Fall only)

MUR 113 Musicianship II. This course develops basic musicianship skills with an emphasis of diatonic sight-singing, rhythmic sight-reading, and dictation of diatonic melodies and chord progressions. The exercises and in-class activities are similar to MUR 109 but at a more advanced level. (Fall and Spring)

MUR 114 Introduction to Music Theory. Basic concepts of music theory addressing students with some musical experience in an instrument or voice but little or no music theory. Scales, keys, intervals, chords, basic part-writing, and other fundamental aspects of musical structure. Some ear training and aural skills. Prerequisite: ability to read music, preferably in both treble and bass clefs. (Students who have completed MUR 101 should not register for MUR 110.) (Fall)

MUR 115 Introduction to Musical Composition. This course provides an introduction to the fundamentals of composition. Topics include harmonic and melodic dictation, simple counterpoint, and word-setting. Prerequisite: MUR 101 or 110. (Fall only)
MUR 129 The Rolling Stones and British Blues-Rock. The music of the Rolling Stones is examined, starting with the earliest music from 1962 and extending to the early 1970s. Emphasis is on the band's stylistic development, as well as on the British blues movement of the early to mid-1960s. The music of other blues-based British groups, including Blues Incorporated, the Yardbirds, the Animals, the Bluesbreakers, Cream, and Led Zeppelin, also are considered. No previous training or ability to read music is required.

MUR 130 The Beatles, the British Invasion, and Psychedelia. The history of the Beatles' career and music is explored in the context of the band's stylistic development, as well as against the backdrop of social, cultural, technical, and music-business events and issues in the 1950s, 60s, and 70s. No background in music theory or ability to play a musical instrument is required. (Fall)

MUR 131 Rock Music of the 1970s. This course surveys rock music in the 1970s, paying special attention to ways in which 70s styles developed out of 60s styles. Artists considered include Jimi Hendrix, Cream, Yes, Led Zeppelin, the Who, the Allman Brothers, the Eagles, Black Sabbath, the Cars, Tom Petty, the Sex Pistols, and Elvis Costello, plus many more. No previous musical training is required. (Fall)

MUR 132 Star Makers. Includes a historical overview of music stars and the publicity campaigns used to promote their careers. From Frank Sinatra through the 1940s; through Elvis Presley and the 1950s; through the Beatles and the Rolling Stones in the 1960s; through the self-indulgent '70s with acts like Elton John, Kiss, and Prince; up to today's high-profile campaigns for Justin Bieber, Rihanna, and Lady Gaga. Students will be versed in the art of writing an artist bio, press releases, and in the various types of PR events staged to gain publicity. Starmakers also looks at the various types of publicity, such as career launching, crisis management (scandals, sudden death of celebrity), and tour press. We also look at how social media has become a game changer for music publicity.

MUR 135A American Musical Theater. A historical and critical survey of the Broadway musical with a focus on its so-called Golden Age (from Oklahoma! to Cabaret). Weekly listening, reading, and video assignments with analysis of dramaturgy, lyric and musical forms, process of adaptation and production, modes of performance. Prerequisite: ability to read music or strong background/interest in musical theater. (Spring, alternate years)

MUR 135B Sondheim and the Modern Musical Theater. A historical and critical survey of the American musical theater from roughly 1960 to the present as reflected principally in the works of composer/lyricist Stephen Sondheim and/or producer/director Harold Prince. Analysis of lyrics, musical forms and idioms, process of adaptation and production, modes of performance. Although prior completion of MUR 135A is recommended, students with a strong background in musical theater will be admitted as well. (Fall, alternate years)

MUR 136 Shakespeare and Music. Music is inextricably woven into the plays of Shakespeare, and those plays have inspired composers for hundreds of years. The course investigates the musical world of Shakespeare's day; the specific uses of music within his plays; their revivals; and the musical representation of Shakespearean themes by later composers, including Mendelssohn, Tchaikovsky, Verdi, and Britten. Prerequisites: none.

MUR 140 Religion and Hip Hop Culture. Religion is an often overlooked element in the study of hip hop culture. This course offers students the opportunity to examine the variety of ways religion finds expression in the dynamic cultural medium of hip hop.

MUR 141 Introduction to Audio and Music Engineering. The science and technology of the electric guitar and related accessories such as amplifiers and effects processors opens a window onto the fields of audio, music, and electrical engineering. The course begins with students building and experimenting with electric guitars to learn about the vibration of strings, musical tuning systems, overtones and timbre, modes of oscillation, Fourier analysis, transducers and passive electrical components, and circuits. In a second project, a headphone amplifier, students are introduced to the fundamental concepts of electronics, including voltage, current, resistance and impedance, basic circuit analysis, ac circuits, impedance matching, and analog signals. The course then moves on to introduce basic digital signal processing concepts through a guitar effects processor (stomp box) project; this includes conversion of sound to digital format, frequency analysis, digital filtering and signal processing, and musical sound synthesis.

MUR 161 Broadcasting in the Digital Age. A descriptive and critical analysis of the nature of electronic mass media, broadcast practices, and impact. Historical development of mass media institutions and role of media in society, including evaluation of news, government regulation, economics, emerging technologies, and audience dynamics, as well as decision-making and organizational aspects of the broadcast industry. Designed to provide a broad, rigorous orientation for understanding basic elements of media production as well as skills training in reporting, writing, editing, delivery, and production of broadcast media. (Spring only)

MUR 201 Basic Jazz Theory and Improv I. Rudiments of jazz, including chord and scale spellings, chord/scale relationships, jazz/pop chord symbol nomenclature, basic forms, chord substitutions, piano voicing; strong emphasis on ear training, vocalization, transcription from records of jazz solos. Prerequisite: MUR 111 or permission of instructor. (Fall only) (2 credits)

MUR 202 Basic Jazz Theory and Improv II. Continuation of MUR 201. Prerequisite: MUR 201 or permission of instructor. (Spring only) (2 credits)

MUR 203 Susan B. Anthony and Her World. See online course description for WST 201.

MUR 210 Ngoma: Drumming, Dance, and Ritual in Southern Africa. Throughout much of southern Africa, the word ngoma means drum. It also refers to specific musical styles that combine drumming, dance, and song. Finally, there is often a ritual dimension to ngoma, which is used in ceremonies focused around individual and social healing. In this class, students bring ngoma alive by learning to perform various Zimbabwean ngoma genres with the option of specializing in either drumming or dance. Through video clips, audio recordings, photos, and articles, we also learn to understand ngoma within a larger cultural framework.
Eastman Courses
In addition to those listed above, qualified students may take courses at Eastman. In general, introductory theory courses (MUR 111 and 112) are prerequisites for taking most Eastman music courses, and the instructor’s permission is necessary to register.

Ensembles
Auditions for performing ensembles occur during the first week of the academic year. During orientation, audition sign-up sheets are posted on the large bulletin board in the second-floor stairwell of Todd Union. Contact Josef Hanson (josef.hanson@rochester.edu) for details. Students accepted into the groups may receive credit by registering for ensembles during the Drop/Add period. Those who complete the semester satisfactorily receive one credit and a grade.

The following performing ensembles are available for credit:

Instrumental Ensembles
MUR 153 Symphony Orchestra
MUR 154 Chamber Orchestra
MUR 155 Chamber Ensembles
MUR 156 Wind Symphony
MUR 157 Jazz Ensemble
MUR 159 Gamelan Ensemble
MUR 165 Mbira Ensemble
MUR 168 West African Drumming
MUR 170 Brass Choir
MUR 175 Percussion Ensemble
MUR 180 Rock Repertory Choir

Vocal Ensembles
MUR 150 Women’s Chorus
MUR 151 Men’s Chorus
MUR 152 Chamber Singers
MUR 158 Gospel Ensemble

For More Information
Please visit the music program website at www.rochester.edu/college/MUR/.

Music and Sound

“Music is a science, certainly, in which exists sure and infallible knowledge, for whether we speak of it in terms of problems or effects, it would never demonstrate any change or alteration. And indeed, we might also with reason call it an art, for it is both a composite of perceptions...and is not useless to life.

—Aristides Quintilianus
On Music (late third century A.D.)

Information about the Program
The music and sound program is a group of undergraduate curricular initiatives that grew out of a collaboration between faculty in the University’s arts, sciences, and engineering disciplines and the Eastman School of Music. Music, science, and engineering play pivotal roles in the University of Rochester and in the broader Rochester community. The music and sound program provides opportunities for interdisciplinary study in these areas.

The music and sound program includes two minors and five clusters that explore and unite the topics of music theory and music processing; language structure and processing; the auditory system that processes both music and language; and cognition, the larger set of abilities of perception, memory, and learning that permit humans to appreciate and learn music and language. The core undergraduate course in music and sound is BCS 260 Music and the Mind. This course is a requirement for all minors and clusters. While one semester of music theory is a prerequisite for all students before taking BCS 260, students who are already taking music theory as part of a major or minor in music can take advantage of several clusters “designed for musicians.” These clusters encourage the student to pursue an additional course in language, linguistics, or cognition to round out their experiences, rather than simply overlapping with their knowledge of music theory.

Advice for First-Year Students
Students interested in a cluster or minor in music and sound should consider completing one or more of the following during their first year: BCS 110, BCS 111, MUR 110, MUR 111, LIN 110, or TH 101/161 at Eastman. Each of these courses is part of at least one cluster or minor.
Advanced Placement
Students who scored a 4 or 5 on the Advanced Placement Exam in Music Theory meet the prerequisite for BCS 260, Music and the Mind.

Clusters and Minors
Five clusters are available within the discipline of music and sound: Music and Linguistics for Musicians (S1MAS001) fulfills the social science divisional requirement; Music, Culture, and Understanding (H1MAS001) fulfills the humanities divisional requirement; Music Cognition (N1MAS002), Music Cognition for Musicians (N1MAS001), and Music and Language for Musicians (N1MAS003) each fulfill the natural science divisional requirement. Details of these clusters can be found on the Cluster Search Engine or music and sound website. Two minors are available: a natural sciences minor in music cognition, or a social sciences minor in music and linguistics.

Courses
The following courses are part of the music and sound clusters. First-year students who complete BCS 110 or 111 during the fall semester may be eligible to take certain upper-level brain and cognitive sciences electives in the spring. Similarly, students who complete LIN 110 during the fall may be eligible to take 200-level linguistics courses in the spring.

BCS 110 Neural Foundations of Behavior. Introduces the structure and organization of the brain and its role in perception, movement, thinking, and other behavior. Topics include the brain as a special kind of computer, localization of function, effects of brain damage and disorders, differences between human and animal brains, sex differences, perception and control of movement, sleep, regulation of body states and emotions, and development and aging. Prerequisites: none. Part of clusters N1MAS001, N1MAS002, N1MAS003, and music cognition minor. (Fall and Spring)

BCS 111 Foundations of Cognitive Science. Introduces the organization of mental processes underlying cognition and behavior. Topics include perception, language processing, learning, and memory. Integrates knowledge of cognition generated from the fields of cognitive psychology, artificial intelligence, neuroscience, linguistics, and philosophy. Prerequisites: none. Part of clusters N1MAS001, N1MAS002, N1MAS003, and music cognition minor. (Fall and Spring)

BCS 260 Music and the Mind. Introduction to the discipline of music cognition. Topics include empirical methods; psychoacoustic principles; influence of Gestalt psychology; music and language; metric and tonal hierarchies; music and the brain; aspects of musical development; and research on musical memory, expectation, and emotion. Prerequisite: one semester of music theory or permission of instructor. Part of clusters N1MAS001, N1MAS002, N1MAS003, S1MAS001, H1MAS001, music and linguistics minor, and music cognition minor. (Fall)

MUR 110 Introduction to Music Theory. Basic concepts of music theory addressing students with some musical experience in an instrument or voice but little or no music theory. Scales, keys, intervals, chords, basic part-writing, and other fundamental aspects of musical structure. Some ear training and aural skills. Prerequisite: ability to read music, preferably in both treble and bass clefs. Part of clusters N1MAS002 and H1MAS001. (Fall)

MUR 111 Theory I. The first in a four-course sequence. Deals with basic elements of harmony, voice-leading, and analysis. Part-writing in chorale style teaches elementary aspects of tonal theory. Prospective music majors should begin their theory requirement with this course. Prerequisite: MUR 101 or 110; or permission of instructor (placement test). Part of clusters N1MAS002, H1MAS001, music cognition minor, and music and linguistics minor. (Fall)

LIN 110 Introduction to Linguistic Analysis. Investigation of the structure of human language, covering the basic techniques and concepts in the subfields of contemporary linguistic analysis. The course emphasizes work in primary material and data analysis and focuses on developing skills in data collection and defining relevant questions to seek evidence to address theoretical and empirical questions in the analysis of language. Prerequisites: none. Part of clusters S1MAS001, N1MAS003, and music and linguistics minor. (Fall and Spring)

For More Information
Please visit the music and sound program website at www.rochester.edu/college/mas. Students are welcome to attend our Music Cognition Symposia (twice per semester, noncredit) to experience a sampling of research in the discipline; see www.esm.rochester.edu/theory/music-cognition for details. Details are posted on the website, and questions can be answered by Melinda Adelman, the BCS undergraduate coordinator.
NAVAL SCIENCE

“If you are going to achieve excellence in big things, you develop the habit in little matters. Excellence is not an exception, it is a prevailing attitude.”

—Colin Powell

Courses

First-Year Classes

NAV 093 Introduction to Naval Science. This course introduces students to life in the United States Navy and Marine Corps. Taught by a naval officer, course content covers military customs, courtesies, and traditions; rank structures; officer and enlisted relationships; and potential career paths. Individual research projects allow students to explore areas of interest. Active-duty guest speakers share their service experience. (Fall)

NAV 250 Sea Power and Maritime Affairs. This course focuses on the development of the US Navy and Marine Corps. As the country and the world have grown and changed, so too has our service. It examines how the history of the Navy fits in with, and has been shaped and influenced by, the history of the country and the world. The class also explores how changes in technology, strategy, politics, and personalities, along with the battles and wars fought, have made the Navy and Marine Corps what they are today. (Spring)

For More Information

Please visit the naval science program website at www.nav.rochester.edu.

THE INSTITUTE OF OPTICS

Information about the Department

Naval Reserve Officer Training Corps Rochester leads 70 men and women, Midshipmen, to earn a college degree and a commission in the Navy or Marine Corps. We develop academic, moral, and physical excellence. Staff mentorship and fellow Midshipman camaraderie ease the transition to college and set a framework for future success.

Midshipmen normally take one naval science course per semester, starting with the two listed below. Additionally, a weekly lab period covers topics of interest to the military service: leadership seminars, speakers on cultural studies, and visits from officers serving in the fleet. Outside the classroom, activities include intramural sports and community service. In regional military drill and athletic competitions, we consistently place among the top three. An integral part of the University and community, Midshipmen participate in the full range of Rochester activities.

Departmental Advice for First-Year Students

Our classes are available to any student interested in learning about military service, regardless of the intent to join. Some courses meet cluster requirements for graduation; check with your academic advisor for details. First- and second-year students interested in becoming officers in the Navy or Marine Corps are encouraged to explore the opportunities our program offers. Most scholarships are awarded in high school; however, students may affiliate on a nonscholarship basis through the college program for additional opportunities to earn a commission and/or a scholarship.

Information about the Department

Optics and optical engineering deal with the generation, propagation, detection, manipulation, and application of light. The University of Rochester’s optics department, called the Institute of Optics, is one of the world’s leading centers for teaching and research in this dynamic field and has been for quite some time—it awarded the nation’s first BS degree in optics in 1932. Although few people realize that “optics” and “optical engineering” are things they could major in, the world’s need for optics experts is always growing. The birth of the laser in the early 1960s is only the most famous of the many advances in optics that continue to change our world, including fiber-optic communications, holography, laser surgery, digital cameras, handheld displays, virtual reality environments, quantum cryptog-
raphy, and energy-efficient lighting. Today, optics has become one of the technological pillars of modern society. Optical techniques also contribute much to modern science, figuring prominently in a number of recent Nobel prizes.

A degree from the Institute of Optics is a symbol of quality and distinction recognized throughout the world. The institute’s optics/optical engineering curriculum (BS degrees are offered in both) provides the depth and breadth needed to prepare for a variety of career options. The required coursework includes classes in geometrical optics, interference and diffraction, advanced mathematical methods, electromagnetic theory, aberrations and testing, optical sources and detectors, and quantum theory, as well as multiple laboratory classes. Majors supplement their required coursework with a number of electives to tailor their programs to their specific interests. Senior year includes a yearlong capstone experience, which usually consists of either mentored research as a member of a professor’s group, or a team-based design project including a customer and a faculty advisor.

The Hopkins Center for Optics Design and Engineering, located within the department and intended expressly for undergraduates, houses state-of-the-art tools for the design, fabrication, polishing, and testing of optical elements, giving our students unusually direct access to cutting-edge technology and industry-standard software. Many students also get involved as underclassmen in the world-class faculty research programs that are a distinctive part of the institute’s culture. In addition, research opportunities are available for optics undergraduates at the Laboratory for Laser Energetics (LL). The LLE features some of the most advanced lasers in the world, such as the Omega EP, which is capable of picosecond operations (www.lle.rochester.edu/).

**Departmental Advice for First-Year Students**

A student entering optical science and engineering as a first-year student typically takes a basic science course, mathematics, a writing or cluster course, and Introduction to Optics or another introductory engineering course. The second semester continues with mathematics, physics, a cluster or writing course, and an introduction to scientific computing. The sophomore year contains more courses in math and physics, a cluster course each semester, and the first two core courses in optics, Geometrical Optics (OPT 241) and Interference and Diffraction (OPT 261)—each course has an accompanying 2-credit lab. The junior year program builds on this foundation and contains courses in electromagnetic theory, lens aberrations and testing, light sources and detectors, and the quantum theory of light. The senior year, drawing on previously completed academic study, features the student’s senior research or design project. Several technical electives are also typically taken the senior year. In addition, select seniors may take graduate-level courses and apply earned credit toward a master’s degree from the Institute of Optics. Consult with the undergraduate program manager (room 106 Wilmot Building) for more details.

*Please note: Any first-year student with a strong academic background in math and physics (i.e., AP credit) may, with instructor and advisor permission, directly enter OPT 241, Geometrical Optics.*

Rochester students completing the BS in optics in recent years have chosen to pursue graduate studies in optics, physics, electrical engineering, and biomedical engineering; to accept positions as optical engineers in the thriving regional and international optics industry; to work in engineering sales; and to enter business programs to pursue an MBA. Medicine and law also offer significant opportunities for someone with a background in optics. Optical instrumentation and techniques are increasingly important in medical research and medical practice, so a medical doctor (or an MD/PhD) with a BS in optics is uniquely educated to become a key participant in these emerging areas. Likewise, because of the strong entrepreneurial spirit of the optics community, a patent attorney with a BS in optics can establish a very active practice.

**Courses**

**OPT 101 Introduction to Optics.** This course introduces the field of optics—from ancient history to the future. Fundamental concepts such as refraction, diffraction, interference, and imaging are explored in a nonmathematical interdisciplinary approach. Each class includes vivid demonstrations that students can try out in the laboratory afterward. The importance of optics in other fields such as electrical, mechanical, biomedical, and chemical engineering, as well as physics and biology are explored and highlighted. Team projects and presentations give students in-depth appreciation of modern technologies ranging from DVD data storage to quantum encryption. We also discuss career paths and jobs in optics.

**Study Abroad Opportunities**

We encourage our students to study abroad, typically during a semester of junior year. Many study abroad credits transfer to the optics curriculum, and instruction can be either in English or the language of the host country. Examples of study abroad program sites for optics include Australia, Israel, Sweden, Spain, and New Zealand.

**For More Information**

Please visit the Institute of Optics website at www.optics.rochester.edu or visit the undergraduate program manager located in Wilmot Building, Room 106.
**PHILOSOPHY**

“Philosophy is to be studied, not for the sake of any definite answers to its questions . . . but rather for the sake of the questions themselves; because these questions enlarge our conception of what is possible, enrich our intellectual imagination, and diminish the dogmatic assurance which closes the mind against speculation.” —Bertrand Russell

**Information about the Department/Advice for First-Year Students**

The Department of Philosophy offers a variety of courses concerning traditional and contemporary philosophical issues. Many philosophical problems arise from a reflective examination of our ordinary beliefs. An excellent example is the problem of freedom and determinism. Most people believe that they have free will but also believe that people are biological organisms whose behavior is determined by internal and environmental factors. These beliefs raise philosophical questions: Can people be both free and determined? If so, how can that be? If not, which are we? Some other philosophical problems concern the nature and methods of scientific inquiry, morality, the legitimacy of governmental coercion, and knowledge and skepticism. The department offers courses on these topics and others, as well as courses on reasoning and logic.

The philosophy major requires 10 courses, including Philosophy 101, two required courses in the history of philosophy, one course in logic, and an undergraduate seminar. Concentrators wishing to emphasize a particular sub-field of interest may make use of optional guidelines for ways of satisfying the major that emphasize either Law and Ethics, History of Philosophy, or Logic and the Philosophy of Science. Many philosophy majors are double majors, and majors who qualify may participate in a philosophy honors program. (For more information about our requirements and guidelines, see www.rochester.edu/college/phl.)

The Department of Philosophy also offers a minor, which consists of five courses (at least two of which are upper-level, i.e., with numbers above 202) chosen in consultation with the undergraduate advisor.

In addition to the major and minor, the department offers six clusters: Ethics and Values; History of Philosophy; Logic; Knowledge, Mind, and Nature; Philosophy and Law; and Philosophy and Teaching Internship. All except the logic cluster are in the humanities. There is considerable flexibility within each cluster. Many introductory courses may be used as the first course in a cluster.

The department sponsors a variety of internships, including some in law and a teaching internship in which students work with elementary school children on reading, writing, and critical thinking skills. Many philosophy majors go on to law school, where they find the analytic and critical skills emphasized in philosophy most useful. Others go on to medical school or business school. Some go on to do graduate work in philosophy.

All students who wish to take a philosophy course, including those students who plan to major or minor in philosophy, should begin with any of the introductory courses listed below.

**International Baccalaureate (IB)**

 Philosophy—Students who receive a higher-level exam score of 5 or better are awarded credit for PHL 101. No credit is granted for subsidiary-level exams.

**Courses**

- **PHL 101 Introduction to Philosophy.** A study of fundamental philosophical problems and approaches to their solutions. (Fall and Spring)
- **PHL 102 Ethics.** A critical examination of leading theories of right and wrong, and good and evil. (Fall and Spring)
- **PHL 103 Moral Problems.** The application of ethical theory to moral problems, such as punishment, abortion, and racism. (Fall and Spring)
- **PHL 105 Reason and Argument.** This course is a study of reason and argument on both scientific and nonscientific topics. We discuss how to evaluate reasoning as it is found in editorials, speeches, and essays and how to understand and evaluate the reasoning found in reports on scientific research. (Fall)
- **PHL 110 Introductory Logic.** Precise methods for formalizing arguments, demonstrating their validity, and proving theorems in first-order symbolic logic are discussed. (Fall and Spring)
- **PHL 111 Philosophy of Religion.** (Cross-listed with REL 111) Historical and recent readings are used to analyze issues such as existence of God, divine attributes, the relation of God to the world, and faith and reason. (Fall)
PHL 120 Engineering Ethics. Codes of ethics developed by the engineering profession refer to integrity, competence, leadership, commitment to enhancing the quality of life in the society and across the world, and protecting the natural and built environment. In this course we explore these dimensions of professionalism and acquire a toolkit for principled decision making, communication, and professional flourishing. We focus on the value judgments that are integral to the engineering design process while also examining the ways in which institutional settings influence decision making. The pedagogy, written work, and evaluation in this course is strongly oriented to case-based analysis. (Fall)

PHL 135 Environmental Ethics. An examination of central concepts and issues in environmental ethics, including the nature of and responsibility for current environmental crises; the varying responsibilities of individuals, institutions, and nations; the importance of sustainability; and the ultimate principles and values at stake. (Spring)

PHL 152 Science and Reason. The nature of science and its relationship to religion: Are there criteria that distinguish science from non-science? Is there such a thing as the scientific method? Has knowledge advanced steadily through the history of science? What role do values play in science? Do science and religion conflict? Is intelligent design science? (Spring)

PHL 171 Philosophical Foundations of Feminism. The investigation of some of the philosophical issues raised by contemporary feminism, such as questions about justice, human nature, and human freedom. Same as WST 205. (Spring)

Please visit the philosophy program website at www.rochester.edu/college/phl/.

PHYSICS AND ASTRONOMY

“The eternal mystery of the world is its comprehensibility.”
—Albert Einstein

Information about the Department
The Department of Physics and Astronomy is dedicated to providing an environment that gives flexibility and customized study plans in which all undergraduate students have the resources they need to succeed. The research interests of the department are very broad, covering condensed-matter physics, nuclear and particle physics, biological physics, plasma physics, mathematical physics, quantum optics, atomic and molecular physics, astrophysics, and infrared astronomy. Research colloquia and seminars are offered every week during the academic year and are open to undergraduates.

We offer special programs for undergraduate students, such as the Research Experience for Undergraduates (REU), the Rochester Symposium for Undergraduate Physics Students (RSPS), and the Teaching Internship Program. In addition, the department supports a students’ section of the American Institute of Physics, serving the interests of undergraduate and graduate students. Undergraduate students are encouraged to engage in research activities at research laboratories on and off campus. There are opportunities for learning data analysis using the excellent computer facilities of the department. More information is available in the Physics and Astronomy Undergraduate Handbook available from our undergraduate office (Room 211 Bausch & Lomb Hall) and on our website at www.pas.rochester.edu.

General Advice
The Department of Physics and Astronomy offers programs leading to the BA or BS in physics; the BA or BS in physics and astronomy; minors in either physics or astronomy; and certificates in biological physics, medical physics, or biological and medical physics.

The BA program in physics is designed for those students interested in physics in conjunction with another area of human endeavor (law, environmental sciences, energy policy, medicine, business, engineering, education, etc.). It lends itself to a double major with other departments.

The BS program in physics provides a thorough preparation for graduate work in physics or astrophysics and is appropriate for students with career interests in teaching and research. The curriculum stresses the fundamentals: classical mechanics, electromagnetism, thermal and statistical physics, quantum mechanics, modern laboratory practices, and introductions to nuclear and particle physics, solid state physics, biological physics, astrophysics, and astronomical techniques. Students are encouraged to present a senior thesis and to participate in research opportunities provided by the department’s research groups. Typically, about 30 undergraduates per year participate in summer and academic-year research. The department is the site of an NSF-funded Research Experience for Undergraduates (REU) program.

The BA and BS programs in physics and astronomy require, in addition to many of the same courses required for the degree programs in physics, up to two introductory and up to three upper-level courses in astronomy. The BA program is designed for those students not expecting to pursue careers in astrophysics. The BS program is designed primarily for students interested in entering graduate programs in physics or astrophysics.
Departmental Advice for First-Year Students

Students with interests in science, mathematics, or engineering who have taken physics in high school are encouraged to begin their introductory study with PHY 141 (honors) in the fall semester. They will continue with PHY 143 (honors) in the spring semester and PHY 142 (honors) in the fall semester of their sophomore year. Students without previous experience in calculus and/or physics are advised to delay their first physics course until the spring semester, when PHY 121 is offered. Students who do well in PHY 121 and wish to pursue introductory physics in greater depth can then switch to PHY 142 (honors) in the fall semester of their sophomore year. The regular continuation of PHY 121, PHY 122–123, is also suitable for physics and engineering students. PHY 113–114 is a calculus-based two-semester course sequence appropriate for majors in the biological and life sciences. For other majors requiring a less intense introduction to physics or astronomy, PHY 100, 102, 103 and AST 102, 104, 105, 106 are courses for nonscientists and are often used for the physics or the physics and astronomy cluster programs.

Students enrolled in PHY 121 or PHY 141 should register concurrently for MTH 161 (Calculus I). Students with AP credit for MTH 161 may want to brush up on mathematical skills using books such as Preparing for General Physics, Math Skill Drills by Arnold D. Pickar (Addison Wesley).

All physics and astronomy majors should start with the same recommended physics sequences as physics majors (see above). In addition, first-year students are encouraged to take AST 111 in the fall semester.

Advanced Placement (AP)

- **5 on test C-I (Mechanics)**
  Credit granted for PHY 113 or PHY 121, and students can be placed into PHY 114, PHY 122 or PHY 142*.

- **5 on test C-II (Electromagnetism)**
  Credit for PHY 114, conditional credit† for PHY 122, and students can be placed into PHY 123 or PHY 143*.

- **5 on test B (General)**
  Conditional credit† granted for PHY 113 or PHY 121. Can be placed into PHY 114 or PHY 122.

- **5 on Physics I (Mechanics)**
  Four general college hour credits; these credits cannot be used to satisfy any of the requirements for the PHY/PAS major or minor.

- **5 on Physics II (Electromagnetism)**
  Four general college hour credits; these credits cannot be used to satisfy any of the requirements for the PHY/PAS major or minor.

- **4 on test C-I (Mechanics)**
  Conditional credit‡ granted for PHY 113 or PHY 121. Can be placed into PHY 114, PHY 122 or PHY 142.

- **4 on test C-II (Electromagnetism)**
  Conditional credit‡ granted for PHY 122. Can be placed into PHY 123 or PHY 143*.

---

* Placement into honors-sequence courses PHY 142 and 143 requires permission of the instructor. Students desiring greater benefits than offered above should appeal to the program coordinator for Undergraduate Studies (211 Bausch & Lomb).

† “Conditional credit” means that credit will be granted if the student receives a grade of “B–” or better in the course into which he or she is placed.

---

International Baccalaureate (IB)

Physics—Students who receive a higher-level exam score of 7 are placed into PHY 114 or PHY 122. Additionally, they are awarded credit for PHY 113 or PHY 121 after completion of PHY 114 or PHY 122 with a grade of B– or better.

Clusters

Courses from the Department of Physics and Astronomy appear in seven approved clusters. The clusters involve three-course sequences and include Science: Discovery, History, and Methodology; An Introduction to the Physical World; Quantitative Physics; Honors Physics; The Nature of the Universe; Science and Technology by Inquiry; and Physics in Seafaring.

Physics Courses

**PHY 100 The Nature of the Physical World.** This introductory course is designed especially for students in the humanities and other non-scientific fields who are interested in learning something about the physical world. Topics include the scale of the universe, the fundamental forces of nature, motion, and relativity, energy, electromagnetism and its everyday applications, the structure of matter, atoms, light, and quantum mechanics. No background knowledge is required, and the material is presented with very little mathematics. Substantial use is made of demonstrations. Prerequisites: none. (Fall or Spring)

**PHY 102 Visions of the Multiverse.** This is an introductory course designed especially for students in the humanities and other non-scientific fields who are interested in learning about science, physics, and concepts (esp. scientific concepts) of a multiple universe reality. Topics include the nature of science, Newton’s laws, relativity, light, quantum mechanics, the nature of particles and forces, and cosmology. In the course of surveying the modern scientific view of the universe, a number of serious concepts of a multiuniversal reality are examined, including the many-worlds view of quantum mechanics as well as fractal and cyclical cosmologies. There are no prerequisites, no background knowledge is required, and the material is presented with very little mathematics. Substantial use is made of demonstrations. This course is intended to be equivalent to our Physics 100 course in terms of satisfying cluster requirements. Prerequisites: none. (Fall or Spring)

**PHY 109 Quantum Reality.** This is an introductory course for non-physics majors who want to learn some basic principles of quantum mechanics. We plan to approach these concepts by relating them to human experience in everyday life. The course is designed with a lot of demonstrations, in many of which the students play a role of either quantum objects or the observers. The course is conceptual, and the use of mathematics is limited to bare minimum. We plan to cover properties of waves, double-slit diffraction experiment, particle in a box and quantization of states, Heisenberg’s uncertainty principle, the Pauli principle and how to build an atom, the birth of new particles and the birth of the universe. Prerequisites: none. (Fall)

**PHY 113 General Physics I.** First semester of a two-course sequence suitable for students in the life sciences. Newtonian particle mechanics, including Newton’s laws and their applications
to straight-line and circular motions, energy; linear momentum, angular momentum; and harmonic motion; Kepler’s laws; planetary and satellite motions. Calculus used as needed. In addition to two 75-minute lectures, one three-hour laboratory every other week and one workshop/recitation per week are required. Laboratory and workshop registration is done at the same time as course registration. Prerequisite: MTH 141 or 161 (may be taken concurrently). (Fall and Summer I)

**PHY 114 General Physics II.** Second course of a two-semester sequence suitable for students in the life sciences. Electricity and magnetism, optics, electromagnetic waves; modern physics (introduction to relativity, quantum physics, etc.). In addition to the two 75-minute lectures each week, one workshop/recitation each week and one approximately three-hour laboratory every other week are required. Laboratory and workshop registration is done at the time of course registration. This course is offered both in Spring Semester and in Summer Session II (B-6). Prerequisites: PHY 113; MTH 142–143 or 162 (may be taken concurrently). (Spring and Summer II)

**PHY 121 Mechanics.** Course makes extensive use of geometry and algebra, as well as trigonometry and simple integration and differentiation. Prior knowledge of introductory calculus (simple integration and differentiation) is required. Passing of the math placement test (PHY 099) for PHY 121 is required. First semester of a three-course sequence for students planning to major in physics, other physical sciences, and engineering. Motion in one and two dimensions; Newton’s laws; work and energy; conservation of energy; systems of particles; rotations; oscillations; gravity; thermodynamics. In addition to two 75-minute lectures each week, one workshop each week and one three-hour laboratory every other week are required. Laboratory and workshop registration is done at the same time as the course registration. This course is offered in Spring Semester and in Summer Session I (A-6). Prerequisites: PHY 099 (formerly PHY 101) and MTH 162 (may be taken concurrently). EAS 101, 102, 103, 104, or 105 can be accepted in place of PHY 099. (Spring and Summer I)

**PHY 121P Mechanics (Mastery/Self-paced).** Covers the same material as PHY 121 and runs in parallel with that course but operates as a self-paced, mastery-learning course, unlike the traditional, lecture/recitation-based PHY 121. The Mechanics course material is divided into 17 units. A student progresses through these units one at a time at his or her own pace, demonstrating mastery of each unit—by getting a near-perfect score on a quiz based on the unit’s material—before moving to the next unit. Instructor-facilitated, peer-led, and individual learning in a workshop staffed 40 hours per week by faculty and teaching assistants replaces the lectures and recitations; video lessons, study guides, and practice problems supplement the textbook and workshop. Mastery learning has been shown, in hundreds of controlled experiments, to be substantially better than traditional methods in promoting proficiency and retention. (See C. C. Kulik, et al. 1990, “Effectiveness of mastery learning programs: a meta-analysis,” Rev. Educ. Res., v.60, p. 265, for a review of such studies.) The laboratory requirements are the same as in PHY 121. Prerequisites: PHY 099 (formerly PHY 101) and MTH 162 (may be taken concurrently). EAS 101, 102, 103, 104, or 105 can be accepted in place of PHY 099. (Spring)

**PHY 122 Electricity and Magnetism.** Second semester of a three-course sequence for students planning to major in physics, other physical sciences, or engineering. Coulomb’s law through Maxwell’s equations; electrostatics, electrical potential; capacitors; electric fields in matter; current and circuits; magnetostatics; magnetic fields in matter; induction, A.C. circuits; electromagnetic waves. In addition to two 75-minute lectures each week, one workshop each week and one three-hour laboratory every other week are required. Laboratory and workshop registration is done at the same time as course registration. Prerequisites: PHY 099 (formerly PHY 101), PHY 121, MTH 162, or PHY 113 and MTH 143 (or its equivalent). EAS 101, 102, 103, 104, or 105 can be accepted in place of PHY 099. (Fall and Summer II)

**PHY 122P Electricity and Magnetism (Mastery/Self-paced).** Covers the same material as PHY 122 and runs in parallel with that course but operates as a self-paced, mastery-learning course, unlike the traditional, lecture/recitation-based PHY 122. See the PHY 121P catalog entry for a brief description of the self-paced, mastery-learning format used in PHY 122P. The laboratory requirements are the same as in PHY 122. Prerequisites: PHY 099 (formerly PHY 101), PHY 121, MTH 162, or PHY 113 and MTH 143 (or its equivalent). EAS 101, 102, 103, 104, or 105 can be accepted in place of PHY 099.

**PHY 123 Waves and Modern Physics.** Third semester of a three-course sequence for students planning to major in physics, other physical sciences, or engineering. Wave motion, physical optics, special relativity, photoelectric effect, Compton effect, X-rays, wave properties of particles, Schrödinger’s equation applied to a particle in a box, penetration of a barrier, the hydrogen atom, the harmonic oscillator, the uncertainty principle, Rutherford scattering, the time-dependent Schrödinger equation and radioactive transitions, many electron atoms and molecules, statistical mechanics and selected topics in solid state physics, nuclear physics, and particle physics. In addition to two 75-minute lectures each week, one workshop/recitation each week and one three-hour laboratory every other week are required. Laboratory and workshop registration is done at the same time as course registration. Prerequisites: PHY 121, PHY 122; MTH 163 or MTH 165 (may be taken concurrently). (Spring)

**PHY 141 Mechanics (Honors).** First semester of a three-course honors sequence, recommended for prospective departmental majors and other science or engineering students with an interest in physics and mathematics who have taken physics in high school. Topics are similar to those in PHY 121 but are covered in greater depth. These include symmetries, vectors, coordinate and velocity transformations, motion in one and two dimensions, Newton’s laws, work and energy, conservation of energy and momentum, special relativity, systems of particles, gravity and Kepler’s laws, rotations, oscillations, molecular theory, and thermodynamics. In addition to two 75-minute lectures each week, one workshop/recitation each week and one three-hour laboratory every other week are required. Laboratory and workshop registration is done at the same time as course registration. Prerequisite: MTH 161 (may be taken concurrently). (Fall)
PHY 142 Electricity and Magnetism (Honors). Third semester of a three-course honors sequence recommended for prospective departmental concentrators and other science or engineering students with a strong interest in physics and mathematics. Topics are the same as those of PHY 122 but are covered in greater depth. These topics include Coulomb's law through Maxwell's equations; electrostatics, electrical potential; capacitors; electric fields in matter; current and circuits; magnetostatics; magnet fields in matter; induction; A.C. circuits; waves. In addition to two 75-minute lectures each week, one workshop/recitation each week and one three-hour laboratory are required. Laboratory and workshop registration is done at the same time as course registration. Prerequisites: PHY 141 or performance at or above the B+ level in PHY 121, MTH 162, or MTH 172 (may be taken concurrently). (Fall)

PHY 143 Waves and Modern Physics (Honors). Second semester of a three-course honors sequence, recommended for prospective departmental concentrators and other science or engineering students with a strong interest in physics or mathematics. Topics are the same as PHY 123 but are covered in greater depth. Introductory examinations of Bohr’s atomic model; Broglie waves; momentum and energy quantization; Heisenberg's uncertainty relation; Schrodinger's cat; electron spin; photon interference; and Bell’s inequalities; selected applications to solid-state, nuclear, particle, and astrophysics. In addition to two 75-minute lectures each week, one workshop each week and one three-hour laboratory every other week is required. The laboratory and workshop registration is at the same time as the course registration. Prerequisites: PHY 141 or permission of the instructor; MTH 162 (may be taken concurrently). (Spring)

Astronomy Courses

AST 102 Relativity, Black Holes, and the Big Bang. A physical and astronomical (but non-mathematical) picture of the workings of Einstein's theories of relativity and their application to cosmology and to black holes and wormholes, the most exotic and energetic objects known to scientists. Our aims in this course are two: 1) to demystify black holes, big-bang cosmology, and the nature of space and time for non-science majors in order that they may evaluate critically the frequent references to these esoteric concepts in the press and in popular science and science-fiction literature; and 2) to provide non-science majors with a glimpse of the processes by which scientific theories are conceived and advanced. Prerequisites: none. (Fall or Spring)

AST 104 The Solar System. To acquaint the non-physical-science concentrator with aspects of the historical and modern study of the solar system, including results from space probe studies, and with theories dealing with the evolution of the solar system. Prerequisites: High school math through intermediate algebra; no physics required. (Fall or Spring)

AST 105 Introduction to the Milky Way Galaxy. In this course we introduce students to our home galaxy, the Milky Way, and use the structure and contents of this normal galaxy to illustrate the origins of stars like the Sun, the origins of the chemical elements from which we are formed, and the evolution of galaxies through the life of the Universe. The emphasis in the presentation is on descriptive astronomy and the physical principles describing the operation of various celestial objects, with a minimum of mathematical detail. Prerequisites: none. (Fall or Spring)

AST 106 Cosmic Origins of Life. A review of the evidence for habitats and the building blocks of life in extraterrestrial space, the possibilities for the development of life elsewhere, and the light that these ideas cast on the origins of life on Earth. We also discuss the future of civilizations like ours, the possibilities of travel to other habitable planets, and communication between advanced cultures spread widely through space. The material we discuss is drawn very widely from astronomy, physics, geology, chemistry, and biology, presented with a minimum of mathematical complexity. Prerequisites: none. (Fall or Spring)

AST 111 The Solar System and Its Origin. A study of the structure and composition of the individual planets and smaller solar-system bodies, the orbital dynamics and overall structure of the solar system and its contents, and the formation of planetary systems like ours. Designed for first-year students who intend to major in science or engineering, the course involves the use of ideas learned in mathematics and physics courses taken concurrently or in high school, such as single-variable calculus, Newton’s laws of motion and gravity, and the ideal-gas law. The course also includes a nighttime observing project taking CCD images of planets and their satellites using the Mees Observatory 24-inch telescope. Prerequisite: MTH 161 or 171 (may be taken concurrently) (Fall)

AST 142 Elementary Astrophysics. Application of the physics and math techniques learned in the introductory course sequences to the study of celestial objects outside the solar system. We discuss stars and their formation from interstellar matter, the structure of galaxies and their distribution in the universe, and the origins and large-scale structure of the universe; all topics that are developed much further in the AST 200-level courses. The course also includes a nighttime observing project based upon student use of professional-style telescopes and CCD cameras. Registration for recitation is required at the time of course registration. Prerequisites: PHY 141–143 or PHY 121–123 (or concurrent enrollment); MTH 161–165 or MTH 171–174 (or concurrent enrollment), or permission of instructor; AST 111 recommended but not required. (Spring)

POLITICAL SCIENCE AND INTERNATIONAL RELATIONS

“What is government itself but the greatest of all reflections on human nature? If men were angels, no government would be necessary.”
—James Madison
The Federalist No. 51

Information about the Department

Political science is the attempt to discover, describe, and explain how politics manifests itself in the world. Our subject matter emerges from numerous contexts, including U.S. local, state, and national politics; the politics of other nations; and international relations. It also arises from more abstract, philosophical concerns. We attempt to create knowledge by the development and use of rigorous theory and the drive to generalize and by rigorous empirical testing through sophisticated, theory-relevant statistical and qualitative methods.

In Rochester’s Department of Political Science, we teach students how to understand real-world politics and give them the tools to think, question, and act. Our graduates pursue an array of careers, including teaching, medicine, and research, but most graduates find that political science gives them a background that is especially useful for careers in law, government, policy analysis, business, or journalism.

The department offers majors, minors, and clusters in political science and in international relations. The department’s website contains detailed information on undergraduate advising, course offerings, distribution requirements, upper-level writing requirements, internships, and departmental honors. We also have faculty advisors available to answer questions nearly every weekday morning and afternoon during the academic year. Names and office hours of advisors are on the department website. Students may find our website at www.sas.rochester.edu/psc/.

Departmental Advice for First-Year Students

The department offers a number of introductory courses at the 100 level that are especially suited for first-year students. These courses are described briefly below. We strongly recommend that students interested in political science take at least two of these courses in their first year. We also encourage them to consider PSC 200 (Data Analysis I). Many other 200-level courses are open to first-year students and may be suitable for students who have performed very well on an AP exam in American politics or comparative government, or who have an excellent background in high school courses in history and government and a strong interest in political science or international relations, but even these students generally take 100-level courses or PSC 200 (Data Analysis I), at least in their first semester of college. First-year students who have questions about any particular course should speak either to a departmental advisor or directly to the course instructor at the beginning of the semester.

We strongly recommend that students interested in international relations take two courses in the field in the first year. Options include IR 101/PSC 101 (Introduction to Comparative Politics), IR 102/PSC 102 (Introduction to Political Economy of Development), and IR 106/PSC 106 (Introduction to International Relations). Students might also look for other courses, including 100-level courses that count toward one of the specialized tracks and 200-level courses open to first-year students. Students are also advised to begin or continue courses in a foreign language. Not only does this help meet the requirements, but it also allows the student to consider opportunities for study abroad that require proficiency in a language other than English.

Advanced Placement (AP) Political Science

Students who received a score of 4 or 5 on the AP exam in either American or Comparative Government will be granted 4 credits in political science. Students who received a score of 4 or 5 on both AP exams are not eligible for additional credit.

Advanced Placement (AP) International Relations

Students who received a score of 4 or 5 on the AP exam in American or Comparative Government or in U.S., European, or World History will be granted credit for one course toward the international relations major. Students who received a score of 4 or 5 on multiple AP exams are not eligible for additional credit.

Courses

IR 101/PSC 101 Introduction to Comparative Politics. Why do democracies emerge, and what explains their vibrancy (or lack thereof)? What causes ethnic conflict? Why do revolutions occur? Why does it matter what rules democracies use for elections? This course introduces students to comparative politics and the study of these important domestic political institutions, processes, and outcomes across and within countries. Cases are drawn from different countries and historical periods to give students a grounding in the method of comparative analysis. (Fall and Spring)

IR 102/PSC 102 Introduction to Political Economy of Development. This is an introductory course on the connections between markets, states, and other actors in the international system. As the world becomes increasingly interconnected and interdependent, economics becomes more important in international politics, and global politics comes ever closer to home. How is international trade related to inequality, development, and growth? Why did Communism fail? Why are some countries persistently underdeveloped? What are the implications of the rise of China? How does the U.S. budget deficit affect other countries? What are the consequences of the Euro Crisis and Brexit for the world outside Europe? Why is it
so difficult to achieve international cooperation on climate change? The course teaches the economic theory and historical background needed to understand these problems and lay the groundwork for more advanced courses. (Spring)

**PSC 104 Introduction to Political Philosophy.** This course is most aptly called “Thinking about Politics.” It aims to examine a range of contemporary issues and to explore the political and philosophical conflicts and controversies that those issues raise. So, for example, we might examine the concepts of patriotism and explore the tensions that arise between it and such other concepts as democracy or freedom or dissent or security. Readings are drawn both from contemporary sources and classic political thought. (Fall)

**PSC 105 Introduction to American Politics.** This course introduces students to the systematic study of American political institutions, processes, and behavior. We focus on key questions about the political system and how political scientists address these questions. The strategic actions and interactions of various political actors are examined from a variety of theoretical and empirical approaches. Political polarization, economic inequality, presidential power, and the role of the administrative state are discussed throughout the course. (Fall)

**IR 106/PSC 106 Introduction to International Relations.** This course provides students with the background and conceptual tools they need to understand contemporary international relations. The course introduces students to the wide range of issues that make up the study of international relations, including the workings of the state system, the causes of international conflict and violence, and international economic relations. Students are introduced to the literature in a broad way to make them familiar with the main theoretical traditions in the field. Time permitting, we also examine topics of particular current interest, such as the evolving nature of power in the post–Cold War environment as well as special global challenges like nation-building and the proliferation of weapons of mass destruction. (Fall)

**PSC 107 Introduction to Positive Political Theory.** Positive political theory is a line of thought that starts with the premise that politics amounts to nothing more or less than a process through which we choose between the competing values, wants, or interests of different persons. It asks whether widely held aspirations regarding how such conflicts are resolved are actually possible to realize and, if so, how. In this class you learn and practice the basic techniques that positive political theorists use to explore this simple but powerful view of politics. (Spring)

**PSC 200 Data Analysis I.** Data analysis has become a key part of many fields, including politics, business, law, and public policy. This course covers the fundamentals of data analysis, giving students the necessary statistical skills to understand and critically analyze contemporary political, legal, and policy puzzles. Lectures focus on the theory and practice of quantitative analysis, and weekly lab sessions guide students through the particulars of statistical software. No prior knowledge of statistics or data analysis is required. (Fall and Spring)

**For More Information**

---

**PSYCHOLOGY**

"...the mind which the psychologist studies is the mind of distinct individuals inhabiting definite portions of real space and of a real time."

—William James

**Information about the Program/Advice for First-Year Students**

Psychology, as a science of behavior and mental life, uses the methods of science to seek answers, develop theories, and explore applications across a broad range of areas, including social factors; learning and memory; motivation; biological factors; development; cognition and language; sensation and perception; movement and action; organizations; and psychopathology. Instruction is offered throughout this broad spectrum of behavior and mental life issues, treating both the natural science and social science aspects of psychology. Coursework includes theoretical and empirical emphases, as well as the application of psychology to the “helping professions.” Student experiences may range from lecture courses, many with small recitations, to individual laboratory, practicum, and internship situations. Individual programs, including a major, minors, an honors program, and several clusters, may be tailored to provide excellent background for postgraduate work in psychology, medicine, education, business, social work, counseling, and other related social and natural sciences, as well as entry into various occupations, particularly those involving delivery of human services.

Students planning to pursue graduate studies in psychology are advised to seek general breadth and focused depth in their knowledge of psychology as well as a working familiarity with research skills.

Advanced Placement (AP) and International Baccalaureate (IB) psychology as well as a working familiarity with research skills.

**Advanced Placement (AP) and International Baccalaureate (IB)**

**PSY 101, Introduction to Psychology,** is waived as a prerequisite for the major and the minors in psychology for students who receive a score of 4 or higher on the AP Psychology examination or a 5 or higher on the higher-level IB examination. A score of 4 or 5 on the AP examination or of 6 or higher on the higher-level IB examination will earn college credit for PSY 101. There is also a placement examination offered during Orientation and at other times by the College Center for Academic Support. Any PSY 101 prerequisites are waived upon passage of this exam.
Clusters

Clusters are offered separately by the two departments that offer courses in psychology. The Department of Brain and Cognitive Sciences offers natural science clusters. The Department of Clinical and Social Sciences in Psychology offers social science clusters and administers the program in psychology. The social science clusters in psychology cover the range of areas in clinical and social sciences in psychology, namely, psychology as a social science, psychopathology, motivation, social psychology, organizational psychology, personality, developmental disabilities, and emotional development.

Courses

The Department of Clinical and Social Sciences in Psychology and the Department of Brain and Cognitive Sciences offer courses in psychology. The latter department also offers its own programs that are described elsewhere in this handbook.

All of the following courses are included in various clusters in Clinical and Social Sciences in Psychology (social sciences) or Brain and Cognitive Sciences (natural sciences).

PSY 101 Introduction to Psychology. One fall section is exclusively for first-year students and has special features that enhance the first semester here. (A mixed class section of PSY 101 is offered in the spring term.) PSY 101 is an excellent entry point for all future directions in psychology. It is a prerequisite to the major and minors, an entry point for the cluster Psychology as a Social Science and provides a broad background upon which to base a choice of more specialized clusters.

The following are courses in psychology programs that are available with advice to first-year students. Although PSY 101 is not a formal prerequisite for the higher-numbered courses listed below, it is strongly recommended as both substantial and contextual background.

PSY 110 Neural Foundations of Behavior. Introduces the structure and organization of the brain and its role in perception, movement, thinking, and other behavior. Topics include the brain as a special kind of computer, localization of function, effects of brain damage and disorders, differences between human and animal brains, sex differences, perception and control of movement, sleep, regulation of body states and emotions, and development and aging. (Fall)

PSY 111 Foundations of Cognitive Science. This course provides an introduction to basic concepts in modern cognitive science, adopting the perspective of modern cognitive psychology. The course is divided into three sections. The first section introduces central cognitive processes, such as pattern recognition, attention and memory, and concepts and categories. The second section focuses on natural language, using language comprehension and language production as a domain for introducing more detailed models of cognitive processes. The third section examines higher-level thinking, focusing on reasoning and decision making. Prerequisites: none. (Fall and Spring)

PSY 161 Social Psychology and Individual Differences. An introduction to the field of social psychology and an overview of research on individual differences in personality. Topics include the self, attitudes, social cognition, emotion, interpersonal attraction, relationships, helping, social influence, group behavior, and dispositional differences among people. Students complete several individual difference measures and receive feedback at the end of the course. Format is lectures augmented with discussions and demonstrations. (Spring)

PSY 171 Social and Emotional Development. An examination of the interpersonal, emotional, cognitive, and environmental factors that influence children's social and emotional development from early infancy through late adolescence. (Fall)

PSY 172 Development of Mind and Brain. Introduces human development, focusing on the ability to perceive objects and sounds, to think and reason, and to learn and remember language and other significant patterned stimulation. Includes the nature and mechanisms of development in humans and an overview of what is known about brain and behavior development in other species. (Spring)

PSY 181 Theories of Personality and Psychotherapy. A survey of psychodynamic, existential, and empirical approaches to personality and psychotherapy. Important: the content of this course can inspire personal growth and self-understanding to the extent that students actively wrestle with and apply the material to their own experience; as a result, this course is designed as a "hybrid" course that combines online learning with traditional face-to-face learning in the form of small-group discussions. (Fall)

PSY 183 Animal Minds. Considers the cognitive and communicative abilities of animals, especially primates, as compared with humans. Topics include thinking, reasoning, remembering, communicating, and understanding numbers, time, and causality in animals ranging from ants to apes. (Fall)

PSY 210 Social Cognition. Social cognition combines classic social psychology with methods and theories from cognitive psychology and neuroscience to study how people make sense of each other and the social world. We examine how the social environment influences cognitive processes such as attention, heuristics, and appraisals and how these processes in turn affect decisions, behaviors, and health. We critically evaluate research on a variety of topics, such as emotion regulation, stereotyping and prejudice, and stress and decision making. (Fall)

PSY 211 Introduction to Statistical Methods in Psychology. Introduction to the use of statistics in psychological research. Topics include descriptive statistics, correlation and regression, and inferential statistics. Examples are drawn from social and personality psychology. Logic of statistical inference and proper interpretation of research findings are emphasized. Please note that, because of the significant overlap between them, students may earn degree credit for only one of these courses: CSP/PSY 211, STT 211, and STT 212. (Fall and Spring)

PSY 232 Psychology of Consumerism. Examines the psychology behind product placement, marketing of products, brand identity, and advertising to consumers. (Spring)

PSY 262 An Approach to Human Motivation. This course provides a review of the theoretical and empirical development of a contemporary approach to human motivation, namely, Self-Determination Theory, which originated at the University of Rochester and is currently researched by scholars around the world. Topics also include applications of Self-Determination Theory to such domains as psychopathol-
ogy and psychological health, work, education, sport, and culture. (Spring)

**PSY 263 Relationship Process and Emotions.** Relationships are among the most important endeavors of human activity. In the past two decades, extensive theory and research has been devoted to understanding the processes of regulating people’s thoughts, feelings, and behavior in meaningful relationships with friends, family, and romantic partners. The purpose of this seminar is to explore this literature. We examine psychological research on such important topics as attachment, emotion, intimacy, conflict resolution, relationship differences and similarities, and the impact of relationships on physical health and emotional well being (as well as other topics that may arise). (Fall)

**PSY 264 Industrial and Organizational Psychology.** Applications of psychological theory and research to work settings. Topics include personnel selection, training and appraisal; organizational structure and transformation; performance in work groups; motivation and satisfaction; leadership; work conditions; and cross-cultural issues. (Fall)

**PSY 267 Psychology of Gender.** Exploration of the ways males and females differ in interaction, theories of development of sex differences, and consequences for social change. (Fall)

**PSY 276 Psychology of Parenting.** Parenting and family life are emphasized from developmental, ecological, and cross-cultural perspectives. Caregiving in diverse family forms and cultures is studied in relation to adult-child interactions, parent/school/community relations, family roles, laws, and parenting skills. Issues related to aspects of diversity in contemporary families are included. (Spring)

**PSY 278 Adolescent Development.** This course surveys theory and research relating to normal development during adolescence. Adolescent development is examined in a variety of contexts, including families, peer groups, and schools; issues pertaining to biological, social, and cognitive development are discussed. (Spring)

**PSY 280 Clinical Psychology.** An introduction to the field of clinical psychology. Students are exposed to prevalent theoretical and research models as well as approaches and research findings to assessment, diagnosis, and treatment modalities. (Spring)

**PSY 282 Abnormal Psychology.** This course provides a conceptual overview to the field of psychopathology. We discuss assessment and diagnosis, etiology, developmental course, treatment, and prognosis of the major psychological disorders. Current theory and research are emphasized. (Spring)

**PSY 283 Behavioral Medicine.** An overview of the application of behavior/lifestyle change approaches to the treatment of medical disorders and the examination of interfaces between behavior and physiology. Topics include diabetes, cardiovascular risk factors, chronic pain, and cancer. (Spring)

**PSY 289 Developmental Child Psychopathology.** Presents theory, research, assessment, and intervention in child and adolescent psychological disorder. Contributions of the normal developmental perspective to understanding psychopathology and risk, and vice versa, are emphasized. (Fall)

**CSP 301W Teaching Psychology.** In-depth consideration of topics in psychology and their communication. PSY 101 is a lab for this course. (Fall)

**CSP 351/CSP 352 Research in Development Neuropsychology.** This course provides guided, direct research experiences in developmental neuropsychology, with a particular focus on autism and other developmental disabilities. (Fall and Spring)

**CSP 377/CSP 378 Exploring Research in Family Psychology.** Provides guided, direct research experiences in investigating the interplay between family relationships and children's social and emotional development. Emphasis is placed on gaining knowledge in translating theories (e.g., family systems theory) into empirically testable hypotheses and designing research methods and techniques to test predictions. (Fall and Spring)

**CSP 385 Psychology of Developmental Disabilities.** Explores educational, therapeutic, and social challenges in developmental disabilities. Students spend approximately eight hours per week in a supervised educational or treatment setting as well as participate in weekly meetings to review and discuss general issues in the field. (Spring)

**PSY 391 Independent Studies in Psychology.** Supervised research on topics in psychology. May be repeated. An Independent Studies Fair is held at the beginning of each semester to facilitate linkages between students and researchers. (Fall and Spring)

**For More Information**

Please visit the psychology program website at www.psych.rochester.edu/undergrad.
Each of the majors incorporates courses from many different departments, requiring a set of core competencies in a variety of disciplines, and ethical situations. For that reason, all of the public health programs address social institutions that structure health care, and to analyze complex challenges that arise in local, regional, and global populations.

The program offers both BA and BS degrees. The program offers BA degrees in bioethics; in epidemiology; in health policy; and in health, behavior, and society. The BS is intended for students who want to specialize in environmental health. The program also offers four minors and six clusters. (Students may choose to major, minor, or complete a cluster within the program, but they may not do more than one).

Program Advice for First-Year Students
The study of public health integrates a wide range of disciplines: it requires, for example, the ability to use and understand statistics, to understand how human and environmental factors contribute to human exposure to environmental toxins and pathogens, to empathize with people from different backgrounds and cultures, to understand social institutions that structure health care, and to analyze complex ethical situations. For that reason, all of the public health programs require a set of core competencies in a variety of disciplines, and each of the majors incorporates courses from many different departments to support its intellectual goals. Indeed, the majors fall into different divisions of the College: epidemiology; health policy; and health, behavior, and society (and their associated minors) are in the social sciences division; bioethics (and its minor) is in the humanities; and environmental health is in the natural sciences. We also offer clusters in natural sciences (Epidemiology and Statistics), social sciences (Introduction to Public Health; Health, Environment, and Sustainability; Health Policy; Medicine in Context), and humanities (Bioethics).

A public health–related major or minor is an ideal way to explore an interest in the health professions of medicine, dentistry, and nursing. To integrate fully an interest in public health with admissions requirements for professional schools, students are strongly encouraged to meet with a health professions advisor in the Gwen M. Greene Career and Internship Center.

All the public health majors require the same core of five courses, so those courses are an excellent place to explore the majors: PH 101, PH 102, PH 103, STT 211 or 212, and PHL 225 or 228. Many of these courses are also required to complete a minor or cluster. But students can also learn about the basic themes of the majors in the other courses listed below.

Courses
PH 101 Introduction to Public Health I. This is a broad survey course designed to introduce beginning students to public health history, concepts, and contemporary issues locally, nationally, and globally. The course is divided into four sections: What is Public Health (history and definitions); Public Health Disparities (health and wealth; social justice; who gets sick/who stays healthy); Issues in Public Health (lead poisoning; tobacco; obesity; emergency; clean water/air; injury; health systems/reform); and Global Health Issues (globalization and development; maternal and child health). (Fall and Spring)

PH 102 Introduction to Public Health II. This is a broad survey course designed to introduce beginning students to four core areas in public health: biostatistics, health policy and management, environmental health science, and social and behavioral sciences. Each of these areas is addressed by experts in the field. Prerequisite: PH 101. (Spring)

PH 103 Concepts of Epidemiology. This course provides beginning students with the fundamental concepts needed to understand health-related information and health policy. The course introduces students to the history of epidemiology and the basic methodological principles used to describe disease occurrence in populations and identify causes of disease. These concepts are subsequently discussed in the context of health policy, outbreak investigations, and epidemiological specialties. (Fall)

PH 116 Introduction to the U.S. Health System. This course examines the organization, financing, and functioning of the United States health care system. It also explores historical perspectives and the insights of international comparisons. Topics include the economics of the U.S. health system, access to care, health policy and politics, and disability and disability politics. (Fall)

PH 201 Environmental Health. This course covers the basic principles used to evaluate the potential human health risk of exposure to environmental contaminants in air, water, and food. Prerequisites: PH 103, BIO 110/112, CHM 131, or permission of instructor. (Spring)

PHL 225 Ethical Decisions in Medicine. Medicine produces some of the most troubling ethical questions that our society faces. We are now confronted with extremely premature infants, elderly people incapacitated by Alzheimer’s disease, and others who have sunk into permanent vegetative states. We can diagnose horrible dis-

Information about the Program
The study of public health provides a rich intellectual framework for the multidisciplinary study of society’s most challenging problems. The program is designed to help students develop the many different skills that are needed to understand and respond to health challenges that arise in local, regional, and global populations.

The program offers both BA and BS degrees. The program offers BA degrees in bioethics; in epidemiology; in health policy; and in health, behavior, and society. The BS is intended for students who want to specialize in environmental health. The program also offers four minors and six clusters. (Students may choose to major, minor, or complete a cluster within the program, but they may not do more than one).
cases with genetic testing, we have myriad options of reproduction if the old-fashioned way is not possible, and we have the option to replace the failing organs and even to enhance our mental and physical abilities. Behind all these issues are deep questions about social justice in the allocation of resources of health care. In this class, we examine some of these ethical controversies both in lectures and in small groups, in which students have more opportunity to present their own views and explore those of others. Students enroll in one of three discussion sections as well as the lecture. Prerequisite: one previous course in philosophy or permission of instructor. (Spring)

**PHL 228 Public Health Ethics.** Most health care ethics focus on the individual decisions about health care, but many ethical questions have implications for society at large. The demands that individual health decisions make on the system may create collective problems, and conversely, the needs of society may limit the freedoms that individuals think they should have. Public health ethics, then, lie at the intersection of medicine, political philosophy, and public policy. This course examines the values of health, social needs, and freedom through a systematic examination of situations in which these conflicts arise. Three papers, weekly responses, class participation. Prerequisite: one previous course in philosophy or permission of the instructor. (Fall and Spring)

**STT 211 Applied Statistics for the Social Sciences I.** Descriptive statistics, statistical analysis, and statistical inference as used in the social sciences, including elements of correlation, regression, and analysis of variance. (Public health students may take either STT 211 or STT 212; degree credit is awarded for only one.) (Fall and Spring)

**STT 212 Applied Statistics for the Biological and Physical Sciences I.** Descriptive statistics, statistical analysis, and statistical inference as used in the biological and physical sciences; including elements of correlation, regression, and analysis of variance. (Public health students may take either STT 211 or STT 212; degree credit is awarded for only one.) (Fall and Spring)

**Students interested in the bioethics program may also wish to consider the following course:**

**PHL 103 Contemporary Moral Problems.** An introduction to moral philosophy as applied to current topics. Some questions to be explored: Is torture morally permissible in the fight against terrorism? Is it okay to destroy embryos for stem cell research? Can abortion sometimes be justified? How? Is active euthanasia ever permissible? Is capital punishment justifiable in principle? In practice? How far does our moral duty to aid distant strangers extend? What sorts of political and socioeconomic principles are morally justifiable? Do animals have moral rights? How should we understand the meaning and value of life and death? We also explore related general questions: Is it always possible for a good enough end to justify bad means? What is the relation, if any, between morality and religion? Are there objective facts about right or wrong, or is morality ultimately subjective or relative to cultures or times? Are there situations in which every available action is wrong? (Fall and Spring)

**RELIGION**

“Not by one road is it possible to arrive at so great a mystery.”

—Symmachus

“If I went back to college today, I think I would probably major in comparative religion, because that’s how integrated it is in everything that we are working on and deciding and thinking about in life today.”

—John Kerry, U.S. Secretary of State

**Information about the Department**

Religion is a major force in the world, both in the past and in the present. It plays a key role in shaping the lives of individuals as well as societies and cultures as a whole. Religion has been and can be a source of peace and compassion or an impetus for division and war. Students of religion learn to employ a variety of theoretical methods and interpretive approaches in order to understand religion in the diverse forms it has taken in different cultures and historical periods. The concentration in religion focuses on the study of the world’s major religions through analyses of their histories, texts, rituals, institutions, and practices that are embedded in complex cultures, societies, and political systems. Students can also take courses in which some aspect of religion, such as ritual, pilgrimage, mysticism, or myth, is studied thematically and comparatively.

Additionally, the department offers a wide range of courses that explore the many ways in which religious ideas and practices intersect with other aspects of human culture and society. For example, the department offers courses that examine the intersection of religion and different genres of music such as hip-hop or blues. Other courses explore the ways in which religion has influenced the law and shaped societal understandings of guilt and punishment. Still others focus the ways in which different religious traditions have shaped human understandings of the nature of the body and the self and have informed everyday bodily practices related to eating, dressing, and sexuality. Finally, in other courses, students grapple with the
ways in which religions have provided the framework for understanding fundamental and perennial questions about the meaning of life, how to understand evil and suffering in the world, and what do we mean by “the good.”

Students have considerable independence in shaping and structuring their major so that they can focus on those areas of the study of religion that are of greatest interest to them while also developing a strong foundation in the study of religion generally and a mastery of the methods and theories used by scholars to understand religion in all its fascinating complexity.

Students in the Department of Religion and Classics are encouraged to do independent research, both in their classes and during the summer. Over the past 10 years, many students in the department have presented their research at the University of Rochester Research Exposition as well as at national conferences and have been awarded significant prizes in recognition of their work. Recent graduates of the program in religion have an excellent record of admission to top-tier graduate schools as well as to medical schools and law schools.

The program in religion is housed in the Department of Religion and Classics, which also offers a major in Classics as well as minors in Arabic, Hebrew, Turkish, Classics, Latin, and Greek.

Departmental Advice for First-Year Students
We want students to take courses that interest them, and, thus, there are no prerequisite courses that first-year students need to take. First-year students, however, are encouraged to begin with a 100-level course. Many students initially take a course in religion in order to fulfill their cluster requirement in the humanities and then go on to declare a minor or major in religion or in classics. First-year students are encouraged to contact the director of undergraduate studies, Anne Merideth (anne.merideth@rochester.edu), with any questions.

Courses
All the courses listed below may be used as part of a major, minor, or cluster in the humanities. The Department of Religion and Classics offers many popular clusters, such as East Meets West, Religion and Society, Religion in America, Christianity, Buddhism, Judaism, Hinduism, Islam, Classical Civilization, Latin, Greek, Hebrew, and Arabic.

Fall Semester
REL 100 Introduction to the Study of Religion. In this course, students explore and are introduced to a) the complex interconnections between religion and national identity, politics, gender, and sexuality as well as everyday practices related to eating, dress/ornament, family life, etc., b) the ways in which religion has variously been defined with respect to the sacred, belief, ritual, practice, and experience, and c) the major approaches to the academic study of religion and central debates within the field of the study of religion.

REL 101 Introduction to the Old Testament. Examination of the texts of the Hebrew Bible (Old Testament for Christians) in their religious, historical, and literary contexts. Students learn the history of the ancient Israelite people from their origins down through the post-Exilic period. Study of the texts of the Hebrew Bible (Old Testament) enable us to explore what we can know about ancient Israelite society and culture, the rise and fall of Israel as a nation-state, religious and theological debates about the role of God in shaping history and the problem of suffering, as well as the writing of the biblical texts.

REL 105 Asian Search for Self. An introduction to the intellectual and religious history of Asia. We investigate ways in which early Vedicism, classical Hinduism, Buddhism, and Jainism conceive of the cosmos, meaningful human existence, and life’s ultimate goals.

REL 111 Philosophy of Religion. Topics include the existence of God, the nature of God, and the relation of God to the world. We examine traditional arguments for and against God’s existence, we consider divine attributes such as omnipotence and omniscience, and we discuss such topics as miracles and the relation of faith and reason.

REL 164 Death, Dying, and Beyond. Death and after-death states, especially as described in Asian religions, and the influence of ideas about death on construction of identity, cosmology, and ultimate meaning.

REL 167 Speaking Stones. This course examines gravestones and funerary architecture in Rochester’s historic Mount Hope cemetery. Students are introduced to Western funeral ritual and practice, with a particular focus on cemeteries in the United States and how the iconography and epigraphy of graves and funerary monuments forge symbolic connections among the living and the dead. Over the years, select students have published their research in the journal Epitaph.

REL 170 Religion and Hip Hop Culture. This course considers an often-overlooked element in the study of hip hop culture: religion. Specifically, the course offers students the opportunity to examine the variety of ways that religion finds expression in the dynamic cultural medium of hip hop. Class format includes lectures, discussions, films, and video/music presentations.

REL 175 Religion and Chinese Society. This course examines the complicated relationship between religion and society in China. It takes a sociological approach, emphasizing that religion should be studied as a social phenomena that closely interacts with the development of society at large. The focus is on contemporary times from the end of the 19th century through present. During this period, China experienced tremendous change. This course introduces how such change impacted and was expressed through religion, religiousity, and religious politics.

REL 189 Sexuality in World Religions. Study of issues surrounding human sexuality as it has been treated in world religions. Issues such as homosexuality, transgender/transsexual, marriage, family, sexual ethics, and gender in world religions are covered.

REL 229 Religion and Violence. Drawing upon historical and contemporary examples, students read a range of classic and contemporary theories that attempt to explain the complex relationship between religion and violence. Topics include sacrifice, scapegoating, war, terrorism, domination, nationalism, iconoclasm, sanctified violence, violent religious fantasy, martyrdom, end times, etc. Is religion inherently violent? What is the relationship between religion and nationality? Religion and constructions of alterity?
Arabic

ARA 101 Elementary Arabic I. An introduction to modern standard Arabic, including the alphabet, pronunciation, vocabulary, grammar, elementary conversation, and reading.

ARA 103 Intermediate Arabic I. Readings, drills, and continued study of grammar.

Hebrew

HEB 103 Intermediate Hebrew. Continuation of HEB 102 with emphasis on enhancing reading comprehension, writing, and speaking skills. Students are expected to have a good understanding of the structure of Hebrew, including familiarity with verb forms. Cross-listed with JST 104.

HEB 204 Hebrew through Media and Literature. Designed to develop advanced reading and conversational skills using various materials, including Israeli newspapers, Hebrew movies and songs, and texts from modern Hebrew literature (fiction and poetry). Writing skills are enhanced through a series of related home assignments. Review of Hebrew verbal system and syntactical structures and enrichment of vocabulary are also among the objectives of this course.

Turkish

TUR 101 Elementary Modern Turkish I. This is the first half of the elementary level of Turkish. In the course, students gain a closer familiarity with Turkish culture through the intensive learning of Turkish language. Turkish is the primary language of instruction. Note: The terms “lecture” and “recitation” conventionally used to identify the blocks have a purely bureaucratic significance and do not reflect in any way the pedagogical approach of the course.

TUR 103 Intermediate Turkish. This the first half of the intermediate level of Turkish. Students improve their Turkish language skills by practicing conversation, engaging with authentic materials for reading and listening, writing short texts, and studying vocabulary and grammar. Prerequisite: TUR 102 or permission of instructor.

Spring Semester

REL 103 History of Judaism. This course provides an overview of Jewish history, texts, traditions, practices, and beliefs and emphasizes Judaism as a living tradition, one that is subject to both continuity and change among its practitioners.

REL 106 From Confucius to Zen. The teachings, practices, and social impact of the major religious traditions of China and Japan.

REL 151 The Blues. The origins of “the blues” in the context of African-American culture in the late 19th and early 20th centuries, its rapid rise to becoming the dominant popular music in the African-American community, and the discovery of blues by white audiences.

REL 157 African American Religious History. Historical survey of religions as practiced by people of African descent living in North America. Christianity, Islam, and African-derived religions are examined. Through its canvassing of doctrinal and ritual frameworks, students are afforded an opportunity to view the diverse and complex terrain of African-American religion. Class format includes lectures, discussions, and film/music.

ARA 102 Elementary Arabic II. Continuation of ARA 101.

HEB 102 Elementary Hebrew II. Direct continuation of Elementary Hebrew 101 with emphasis on enhancing reading, writing, and speaking skills. Cross-listed with JST 103.

HEB 104 Intermediate Modern Hebrew II. Continuation of HEB 103.

HEB 204 Hebrew through Conversation. A conversational course designed to offer the opportunity to converse and discuss anything in Hebrew, from poetry to politics, depending on the interest of the class. Cross-listed with JST 204.

TUR 102 Elementary Turkish II. The second half of Elementary Turkish.

TUR 204 Intermediate Turkish. The second half of Intermediate Turkish.

For More Information
Please visit the religion program website at www.rochester.edu/college/rel/ or email the director of undergraduate studies, Anne Merideth, with any questions at anne.merideth@rochester.edu.
RUSSIAN STUDIES

“Every Russian . . . lives in multiple worlds: in a past that still shapes his thinking and language and habits; in the sometimes unbearable present, with its economic and psychological shocks; and in the future, which is even more unknowable, more unpredictable, than it is elsewhere . . . every Russian is, in some way, engaged in building a new reality, a new state, a new identity, a place in the greater world.”

—David Remnick

“Recent media accounts have argued that the U.S. government suffers from an absence of high-quality expertise on Russia . . . Moreover, the shortage of informed expertise transcends our borders. The House of Lords’ scathing 2014 report attacked the UK’s demolition of its Russian expertise and that Britain has sleepwalked through the crisis leading to the invasion of Ukraine. French analysts tell a similar story in France.”

—“Countering Putin begins with knowing what his regime is saying” article in The Hill (American political newspaper published in Washington, D.C.)

Information about the Program

Russian studies is an interdepartmental program in the College that incorporates the perspectives of several disciplines and the linguistic, historical, and cultural background needed to understand Russia’s past, to analyze its present, and to make responsible assessments about its future.

The three departments providing the core faculty for this program are modern languages and cultures, history, and political science, but a concentration may include courses in, or cross-listed with, international relations, religion and classics, Judaic studies, Polish and Central European studies, film studies, women’s studies, comparative literature, and economics. The Russian studies curriculum, like Russia itself, is an evolving work in progress, with new courses added and old ones revised to reflect new knowledge in this area and changing opportunities for graduates.

A Russian studies major or minor can be designated as belonging either to the humanities or social sciences, depending on the student’s course choices. Students with a strong interest in Russian studies have done second majors in history, political science, international relations, and other fields. Russia has a history and culture that go back more than a millennium, while its democracy and market economy are relatively new. The Russian Studies Program prepares students not only to know about this area but also to work in Russia or to prepare for future graduate study and careers in the field.

Program Advice for First-Year Students

Almost any course in our curriculum that interests you is a good place to get started, whether it is language, literature, current events, history, art history, or an introductory course in international politics. All Russian studies courses are open to first-semester first-year students.

Clusters

The program offers two humanities clusters: 1) Introduction to Russian Culture and Civilization, and 2) Russian Studies. There is also a Russian Studies Cluster in the Social Sciences—Great Experiments: Identities and Cultures in Transition. Additional Russian clusters are offered through the Department of Modern Languages and Cultures and the Department of History. All Russian-related courses fit one or more clusters.

Study Abroad

Students who major or minor in Russian studies are strongly encouraged to take part in the Summer Program at St. Petersburg University run by the Department of Modern Languages and Cultures or the semester-long CIEE program sponsored by the College. Students participating in the summer program may apply for a Mildred R. Burton Travel Fellowship in the Department of Modern Languages and Cultures.

Courses

Russian Language

Incoming students with a background in Russian should consult the Russian program in the Department of Modern Languages and Cultures for placement. There are courses at the beginning, intermediate, and advanced levels, and fall of the first year is an ideal time to begin with 101 or to continue the study of Russian.

Russian Studies

The following courses given in English may be of particular interest to first-year students:

Fall Semester

RST 126 Russia Now. Students learn how to analyze ongoing political, economic, and social changes in the world’s largest country through the use of print and electronic sources along with background reading on Russia since the end of Communism. In English.

RST 160 The New Europe. Students follow events in Europe (from Spain to Russia) using print and electronic sources. Weekly discussions, analysis, three written briefings on developments. In English.

RST 235 Tolstoy’s War and Peace. A semester-long exploration of the world of War and Peace. The class works its way through the novel over the term while looking at materials that help “unpack”
it, including historical accounts of the same events and attempts by Russian, British, and American directors to capture the essence of the novel on film. In English

**RST 240 Nabokov.** A survey of the writer’s Russian and American works and his contribution to world literature. Reading his most renowned novels, we acquire an understanding of Nabokov’s style, philosophy, and ethical principles. Our discussions address his ideas of life and death, space and time, regularity and chance, as well as such issues as otherness, individual freedom, and independent thinking. We also analyze Nabokov’s artistic discourse as we attempt to assess his legacy: was he a trickster, as some critics describe him, or a deep thinker and brilliant stylist, as others argue? In English.

**PSC 106 Introduction to International Relations.** This course provides students with the background and conceptual tools they need to understand contemporary international relations. The course introduces students to the wide range of issues that make up the study of international relations, including the workings of the state system, the causes of international conflict and violence, and international economic relations.

**Spring Semester**

**RST 126 Russia Now.** Tracking political, economic, and social events in contemporary Russia, discussing them in class and writing briefing papers. In English.

**RST 128 Russian Civilization.** Russian civilization from its beginnings a thousand years ago to the present day. Each unit covers historical and cultural background as well as literary texts. Readings include Russian fairy tales and saints’ lives, excerpts from the autobiography of the 17th-century heretic Avvakum, tales by Pushkin and Gogol, one of Dostoevsky’s most powerful and influential novels *Demons* and a wide range of materials from the 20th century. In English.

**RST 222 Russian Drama.** An introduction to the Russian theater in its cultural and political context, with close readings of plays from the late 18th century to the late 20th century. The early comic masterpieces of Griboedov and Gogol held up a mirror to social problems and gave birth to plays on social themes by Ostrovsky and Tolstoy in the late 19th century. The plays of Anton Chekhov at the turn of the century both anticipated and highly influenced the developments of modern theater in the decades to follow, both in Russia and abroad. We conclude by examining theater in the Soviet period in plays by Kharms, Bulgakov, and others. In English.

**HIS 132 Imperial Russia.** This course examines the history of the Russian Empire from the reign of Peter the Great (1692–1725) to the revolutions of 1917. Topics include Peter’s westernization of Russian elites and the costs thereof, the Pugachev rebellion of 1773–75, the spread of Enlightenment ideals to Russia during the Napoleonic Wars, the abolition of serfdom, Sergei Witte's industrialization drive, socialist movements in Russia, World War I, and the causes of the revolutions of 1917.

## Information about the Program

Statistical designs of experiments and their analysis are indispensable, for instance, in producing effective medical compounds and treatments, for improving the quantity and quality of food production, and for maintaining the quality of manufactured goods. Statistical techniques are also widely used in biological, educational, genetic, psychological, and other sciences. Refined statistical procedures are extensively employed in economics for studying education needs, predicting economic growth, forecasting industrial production and employment rates, studying stock market fluctuations, and assessing the environment, health care, and social welfare. A number of political and social studies routinely employ a variety of statistical procedures.

The program in statistics offers a wide variety of courses for a major or minor in statistics, a joint major in mathematics/statistics, and the prerequisites for majors in other departments. Some of these courses are also required for the certificates in actuarial and management studies and for three clusters within statistics. Double majors with statistics and other areas such as economic and mathematics are also possible.

### Departmental Advice for First-Year Students

STT 211, 212 and 213 are noncalculus courses, and **only one** of them is required for several majors and minors. These three courses and the intermediate level STT 216 introduce statistical analysis, methods, and procedures for a number of applications. Computer packages are used for statistical analysis in all these courses. A wide range of additional courses in statistical theory and applications is available.

### Advanced Placement

AP 4 or 5: Four credits in statistics (may be used as STT 211 or STT 212)
Courses

STT 211 Applied Statistics for the Social Sciences I.
Contains statistical analysis, methods, and procedures for applications in social sciences.

STT 212 Applied Statistics for the Biological and Physical Sciences I. Contains statistical analysis, methods, and procedures for applications in physical sciences.

STT 213 Elements of Probability and Mathematical Statistics. With a brief introduction to the elements of probability, the basic statistical analysis, principles, and procedures are introduced and illustrated through applications.

STT 216 Applied Statistics II. Prerequisite: can be taken after one of STT 211, 212, or 213. A quick review of the basic topics is followed by tests of hypotheses, sample size determination, paired comparisons, analysis of variance, regression and correlation, Chi-square tests for goodness of fit and for association and contingency.

For More Information
Please visit the statistics program website at www.rochester.edu/college/STT/.

SUSTAINABILITY
(MULTIDISCIPLINARY STUDIES CENTER)

“The great challenge of the twenty-first century is to raise people everywhere to a decent standard of living while preserving as much of the rest of life as possible.”
—Edward O. Wilson

Information about the Program
The minor in sustainability is intentionally interdisciplinary and includes courses from the natural sciences, social sciences, and humanities. The goal of the minor is to provide a curriculum that encourages students to learn to communicate and to solve problems of societal relevance that straddle disciplinary boundaries in sustainability and global change.

Students wishing to satisfy the natural sciences or social sciences divisional area of the Rochester Curriculum must take at least three of the six classes from that division.

Program Advice for First-Year Students
Courses appropriate for first-year students are listed below. Several other courses in the minor are upper-level courses and may have required prerequisites. Students interested in these courses are encouraged to take appropriate introductory courses in the departments of interest.

Advanced Placement
Students who have scored a 4 or 5 on the AP Environmental Science exam may use that credit for EES 103 Introduction to Environmental Science.

Clusters
There are three clusters in sustainability: one in humanities, one in natural sciences, and one in social sciences. The clusters are Sustainability and the Humanities (Humanities); Society and Sustainability (Social Sciences); and Energy and Sustainability (Natural Sciences).

Courses

BIO 104 Ecosystem Conservation and Human Society. (Natural Sciences) The course examines a new approach in conservation biology that identifies and places economic value on the services that natural ecosystems provide. Such services are basic to sustainable societies and include clean water and air, waste decomposition, pollination, and farmland productivity. Major themes include an overview of other approaches in conservation biology; a review of the services that ecosystems provide; ways the value of these services are determined; and how this novel approach is influencing economic and political policy at local, national, and international levels. (Fall)

CAS 245/ENG 245 Literature and the Modern Environmental Imagination. (Humanities) This course studies American writers’ engagement with shifting experiences of environment, nature, and place during the period of intense modernization from the 19th and 20th centuries. Reading slave narratives, nature writing, novels, and essays, we study how writers imagine human-environment relationships amidst social, economic, and technological changes, such as urbanization, colonization, industrialization, and the civil rights and social justice movements. (Fall)

CHE 150 Green Energy. (Natural Sciences) An introductory engineering course about energy production, conversion, and utilization. The first half of the course covers energy and power metrics, material and energy balances, and the fundamental laws of thermodynamics. The remainder of the course examines traditional and alternative energy sources, energy distribution, and energy utilization. Course activities include weekly homework assignments, exams, and a project. Emphasis is on assumption-based problem solving. (Fall)

EES 103 Introduction to Environmental Science. (Natural Sciences) Introduction to environmental science topics through case studies of two local issues. Lake Ontario investigation includes topics of hydrology, ecology, air and water pollution, and domestic
and international governance. Study of the Marcellus Shale addresses energy consumption and production, risk assessment and public health, economics, and policy. Course concludes with critical analysis of technological “solutions” such as ethanol and nuclear power. (Spring)

EES 105 Introduction to Climate Change. (Natural Sciences)
This course explores the Earth’s dynamic climate system through lectures, discussions, and computer-based modeling of climate processes. Fundamental and important questions that are considered include: What are the main factors that determine the Earth’s climate? What forces can drive climate to change? What can we learn from climate change in the Earth’s distant past? How do we know that our climate is now changing? What can we expect from the Earth’s climate in the near future, and how would it affect us? (Spring)

Prerequisite courses students may wish to consider to prepare for sustainability minor upper-level courses

ECO 108 Principles of Economics. The fundamentals of micro-economic and macroeconomic theory, with applications; preparation for subsequent economics courses. This course is a prerequisite for ECO 238 Environmental Economics. (Fall and Spring)

ECO 207 Intermediate Microeconomics. The economics of consumer choice and the demand for goods; producer choice, including the supply of goods and the demand for labor and other inputs; the effects of competition and monopoly power on prices and production. This course is a prerequisite for ECO 238 Environmental Economics. (Fall and Spring)

PHL 103 Contemporary Moral Problems. An introduction to moral philosophy as applied to current topics. May be used as an option for a 100-level prerequisite for PHL 230 Environmental Justice. (Fall and Spring)

For More Information
Consult the sustainability program website at www.sas.rochester.edu/sus/undergraduate/minor-clusters.html.

THEATER COURSES
See English for program details.

WOMEN’S STUDIES

“...it is the duty of all our schools, colleges, and universities to open their doors to woman and give her equal and identical education advantages side by side with her brother man.”

—Susan B. Anthony

Motions for coeducation presented to state teachers’ convention (1857)

Susan B. Anthony Institute for Gender and Women’s Studies
Women’s studies focuses on the experiences of diverse groups of women and changing cultural gender issues as well as economic, political, and psychological relations between women and men. Because gender and women’s studies asks questions about women, sexuality, and gender that no single academic department is able to answer, the program encourages an interdisciplinary approach. The program also offers an exciting range of internships in the community through which students may earn course credits.

The program offers an undergraduate major and minor, an honors program, and clusters in the humanities and social sciences. Students have the opportunity to work with faculty from the humanities, sciences, and social sciences who are appointed in the College, the Eastman School of Music, the Margaret Warner Graduate School of Education and Human Development, the School of Nursing, and the School of Medicine and Dentistry.

The College opened the program in women’s studies in 1982 to address curricular and scholarly issues important for understanding the role of women in contemporary society. The Susan B. Anthony Institute for Gender and Women’s Studies is named to honor Susan B. Anthony, the 19th-century suffragist who led a successful campaign to have women admitted to the University of Rochester in 1900. The institute draws on Anthony’s goals and ideals and preserves her rich historical connections with the city of Rochester.
In addition to the undergraduate curricular program, the institute also sponsors graduate certificates, graduate fellowships, regular faculty research seminars, public lecture series, conferences, and opportunities for students to meet with visiting scholars.

Departmental Advice for First-Year Students

Students interested in a major, double major, or a minor in women’s studies are encouraged to take WST 100 (2 credits) and foundation courses (samples listed below) during their first and second years. Courses open to first-year students vary from year to year. Our introduction and foundation courses generally lead into clusters. Numerous elective courses cross-listed with women’s studies are offered each year. Certain courses not already cross-listed with women’s studies can be taken through other departments and applied towards WST credit. Students are advised to check with the institute office.

Clusters

**Humanities**
- Race and Gender (H1WST001)
- Gender, Culture, and Representation (H1WST002)
- Gender and Literature (H1WST003)
- Gender and Sexuality (H1WST004)
- LGBTQ Studies in the Humanities (H1WST005)
- Theory and Philosophy of Feminism (H1WST006)

**Social Sciences**
- Gender and Social Issues (S1WST001)
- History and Theory of Feminism (S1WST002)
- Gender, Science, and Health (S1WST003)
- Gender and Public Policy (S1WST004)

Courses

**WST 100 Writing Women’s Lives.** (Fall 2015 topic) WST 100 topics change each semester. Women’s Personal Cinema approaches women’s studies through the heterogeneous genre of personal cinema, understood as autobiographical documentary, autoethnography, diary, and first-person cinema. Often utilizing amateur equipment (16mm/8mm film, consumer video cameras) and found footage, these sophisticated works interpenetrate private and public spheres and subvert dominant practices to produce new meaning. Examining film, video, and photo projects by women in different cultural contexts we ask: how does the production and consumption of media contribute to the formation of modern social subjects? How can memory, identity, gender, and sexuality be interrogated through cinematic forms? Can personal cinema produce spaces of aesthetic possibility, expression, and political resistance? We consider these questions through forms transgressing categories of narrative, documentary, and avant-garde in addition to texts in cinema studies, feminist theory, and art history. (2 credits)

**WST 200 Colloquium in Women’s Studies.** The diversity of feminist thought and practice in its importance in forming women’s studies, in its impact on other disciplines, and in its articulation with lives and social practices.

**Sample Foundation Courses**

Foundation courses are offered under many general topics, including women and gender in history, society, politics, literature, art, philosophy, health, science, as well as issues in lesbian and gay studies. Foundation course offerings vary from year to year and are offered in both fall and spring semesters. Some of our foundation courses are:

**WST 103 Language and Sexuality.** This course investigates various aspects of language as used by members of sexual minority groups, focusing on language of and about gay men, lesbians, bisexuals, and transgendered people, including "reclaimed epithets" (e.g., "dyke" and "queer"), gender vs. sexuality vs. sex, and the role of language in creating/maintaining sexual categories and identities. Part of Cluster H1WST004. (Fall)

**WST 205 Philosophical Foundations of Feminism.** This course analyzes the conceptual foundations of beliefs of the nature and behavior of women, examines different types of feminist theory, and considers the political and ethical consequences of feminism. Topics include woman as Other; sex roles and self-determination; liberal, Marxist, and radical feminist theories; equal rights; and abortion. Clusters: History and Theory of Feminism S1WST002, Gender and Public Policy S1WST004, Theory and Philosophy of Feminism H1WST006. (Spring)

**WST 206 Feminism, Gender, and Health.** This course considers how theories of gender, social organization, and biological sex shape the questions asked and explanations and interventions offered in the areas of health, disease, and well-being. We examine the effects of gender, social class, and race in mediating health effects, with particular emphasis on women’s health. Some issues examined include life cycle and transitions, collective and individual trauma, access to health services, HIV/AIDS, reproductive health, and longevity. Clusters: Gender and Public Policy S1WST004, Gender and Social Issues S1WST001, History and Theory of Feminism S1WST002, Gender, Science and Health S1WST003. (Fall)

**WST 210 LGBTQI Experiences in U.S. History.** This course looks at the history of sexuality in the United States through the vantage point of queer communities. The term “queer” encompasses lesbian, gay, bisexual, transgender, and intersex (LGBTQI) identities. Special attention is paid to issues of class, gender, race, ethnicity, repression, and resistance. While the primary focus of this course is 20th-century U.S. queer history, we also discuss LGBTQI identities and analyze the ideas of queer and safe spaces. The final part of the course examines contemporary issues facing queer communities such as legal rights, educational policy, and media representation. Cluster: LGBTQ Studies in the Humanities H1WST005. (Fall)

**WST 214 Women as Image and Text.** Feminist art historians have changed the way we think about images of women, works by women artists, and the very notion of artistic genius. This course investigates the way in which visual images of women participate with other cultural and social factors in the construction of the idea of woman. It looks at types and conventions in works by male and
familiarize students with key principles and strategies for becoming successful communicators across different modes and contexts. For both undergraduates and graduates, the program fosters a culture of open, honest, and critical communication.

WSAP is home to the Primary Writing Requirement (PWR); the undergraduate English for Academic Purposes Program (EAPP); a range of undergraduate writing courses related to writing, speaking, and tutoring; and the Writing and Speaking Center, where students can find tutoring services.

Primary Writing Requirement and Placement Information
All students at the University of Rochester, whether incoming first-year students or transfers, must satisfy the Primary Writing Requirement. The majority of students fulfill the requirement by earning a “C” or better in WRT 105, Reasoning and Writing in the College, or WRT 105E or WRT 105A and B, versions of 105 chosen by students who need more support to meet the demands of college-level writing. Students who believe that they are already proficient college writers may petition to substitute a University of Rochester writing-intensive course for WRT 105. The substitute course may not also be used to fulfill the Upper-Level Writing Requirement. Transfer students who have completed a WRT 105 equivalent at another institution and received a “B” or better may petition to use this course to satisfy the Primary Writing Requirement. For more information on satisfying the Primary Writing Requirement, including instructions on how to access the Writing Placement Survey, please refer to writing.rochester.edu.

Students admitted to the College through the English for Academic Purposes Program fulfill the requirement by earning a grade of “C” or higher in WRT 103, EAPP Critical Reading, Reasoning, and Writing, and WRT 104, EAPP Research, Reading, and Writing. For more information on EAPP placement and courses, please refer to http://writing.rochester.edu/eapp/index.html.

Courses
WRT 105 Reasoning and Writing in the College. WRT 105 introduces students to disciplinary writing at the college level through instruction in small sections that focus on the act of writing. Section topics have ranged from “Adolescence: War or Peace” to “Searching for Whales: Myth, Science, and Ecological Sustainability” and cover a range of subjects and disciplines. The course provides instruction and practice in clear and effective writing and in constructing cogent and compelling arguments as students draft and revise numerous papers of different forms and lengths. Students consider the roles of audience and purpose in shaping the organization, style, and argumentative strategies of their own papers while they learn to become critical readers of their writing through peer critiques and revision and editing workshops. Each section has unique content. For an updated list of course descriptions, please refer to http://writing.rochester.edu. (Fall and Spring)

WRT 105E Reasoning and Writing in the College. WRT 105E is an extended version of Reasoning and Writing in the College. While WRT 105 and WRT 105E have the same expectations for completion, WRT 105E is intended for students who decide that they need a more supported writing experience to meet the demands of college writing. All sections of WRT 105E include an additional
class to 10 students. WRT 105E students who have worked diligently but have not attained a B- or better may take an incomplete and sign up for the Extension, a weekly workshop and tutorial that allows students to raise their final grades and satisfy the Primary Writing Requirement. Each section has unique content. For an updated list of course descriptions, please refer to http://writing.rochester.edu. (Fall and Spring)

WRT 105A Reasoning and Writing in the College: First Course in WRT 105A-WRT 105B Sequence. WRT 105A (Fall) and WRT 105B (Spring) distribute the work of WRT 105E across two semesters, with WRT 105A covering the first half of WRT 105E. WRT 105A immerses students in the experience of academic writing, with a particular emphasis on analyzing, using, and documenting scholarly and non-scholarly texts. It provides instruction and practice in constructing cogent and compelling arguments as students draft and revise two short argumentative essays. Students develop and test their ideas through discussion, informal writing, peer critiques, and self-assessments. All sections of WRT 105A and B revolve around a theme and include a weekly writing group in which students do the work of writing with immediate support from the course instructor. To proceed from WRT 105A to WRT 105B, students must earn a grade of “C” or higher. (Fall)

WRT 105B Reasoning and Writing in the College: Second Part of WRT 105A-WRT 105B Sequence. The second half of the WRT 105A-WRT 105B sequence, WRT 105B immerses students in the experience of academic writing, with a particular emphasis on analyzing, using, and documenting scholarly and non-scholarly texts. It provides instruction and practice in constructing cogent and compelling arguments as students draft and revise two short argumentative essays. Students develop and test their ideas through discussion, informal writing, peer critiques, and self-assessments. All sections of WRT 105A and B revolve around a theme and include a weekly writing group in which students do the work of writing with immediate support from the course instructor. WRT 105B students who have worked diligently but have not attained a grade of “B-” or higher may take an incomplete and sign up for the Extension, a weekly workshop and tutorial program that allows students to continue working on their writing, raise their final grades, and satisfy the Primary Writing Requirement. (Spring)

WRT 108 Workshop in Writing. This course offers ongoing practice and instruction in writing and critiquing writing. Guided by a writing consultant, students plan, draft, and revise their writing; critique each other’s work; assess their own writing; and participate in workshops on writing issues shared by the group. The semester’s work culminates in a final portfolio that features polished essays and an overall self-assessment. WRT 108 is a two-credit course, which is graded pass/fail. Prerequisite: WRT 105/WRT 105E or alternative satisfaction of the Primary Writing Requirement. (Spring)

LIN 161/WRT 250 Modern English Grammar. This course is a comprehensive review of the grammar of modern standard English. The course is of interest to those who wish to sharpen their language skills or to know more about the workings of the English language whether for practical, cognitive, or creative ends. Drawing on work in mostly pretheoretical, descriptive linguistics, this course reveals the mechanics of standard English structure with occasional detours into the finesse of usage across registers (dialect to slang). Students learn to develop the ability to see patterns in grammar as well as its structural possibilities and limits. Assignments regularly involve reflection on form, usage, and speaker judgments. Through a final project, students investigate some aspect of an English variety available to them. Throughout, students work with their data samples of English to explore how speaker choices lead to particular grammatical structures or yield ungrammaticality. Background in linguistics or grammar not needed. (Fall)

WRT 261 Writing in a Digital World. (Cross-listings: ENG 288, DMS 250) The purpose of writing in a digital world is to engage with a broader community around a topic of interest and contribute to public knowledge. In this course, students are invited to dig deeply into a question of interest, write for a public audience, and use the Internet as an archive of information waiting to be discovered, analyzed, and written about. Students can draw on pre-existing research interests from their majors or develop a line of inquiry stemming from class discussions, writing, and research. In order to gain experience writing to a range of readers, students engage in a writing process informed by peer review, self-assessment, and revision. Shorter writing assignments help students develop and refine ideas as they transform texts for different audiences. The final research project is multimodal, published for a public audience, and should demonstrate your ability to think critically about a topic and effectively communicate that knowledge to a range of readers. Prerequisite: PWR satisfied. (Fall and Spring)

WRT 245 Advanced Writing and Peer Tutoring. (Cross-listing: ENG 285) This course prepares sophomores and juniors as well as seniors enrolled in five-year programs for work as writing fellows. Facilitates development of a strong, intuitive writer and speaker in order to become a successful reader, listener, and responder in peer-tutoring situations. Ample writing and rewriting experiences, practice in informal and formal speaking, and the critical reading of published essays and student work enhance students’ abilities to become conscious, flexible communicators. Before tutoring on their own, students observe writing fellows and writing center consultants conduct tutoring sessions. On completion of the course with a “B” or better, students should be ready to conduct tutoring sessions as writing fellows. Prerequisites: satisfaction of Primary Writing Requirement and a minimum GPA of 3.0; by application only. (Fall)

WRT 247 Spoken Communication and Peer Tutoring. This course prepares selected sophomores, juniors, and eligible first-year students for work as speaking fellows. Focuses not only on the skill of public speaking but also on peer tutoring and assisting students with their own forms of spoken communication. In this course, we examine various components of presentations, including effective use of visual aids and professional delivery styles. We also explore several types of spoken communication for different purposes and audiences, including argumentative and descriptive speeches, interviews, and group presentations. Through analyzing, studying the construction of, and creating and delivering their own presentations, students improve their own speaking styles and develop the skills necessary to aid their peers in constructing and revising presentations as well as in making the transition from page to performance. By the end of the semester, students should be ready to take on their own hours as peer tutors. (Spring)
Writing and Speaking Center Services

The Writing and Speaking Center offers a wide variety of writing and speaking support services for undergraduate students of all levels and in all disciplines. Our office is staffed by graduate-student Writing Consultants and undergraduate Writing and Speaking Fellows from the humanities, the social sciences, and the natural and applied sciences. Our tutors provide individualized feedback and assistance on all types of academic writing and speaking. We invite students to use our services during any stage of the writing process, from brainstorming ideas to polishing a final draft. Similarly, students can visit a Speaking Fellow at any point as they are developing or practicing a presentation. The Writing and Speaking Center is located on the ground floor of Rush Rhees Library, G-121. For more information about face-to-face and online tutoring services, please visit our website at http://writing.rochester.edu or call 273-3577.

For More Information
Please visit the writing, speaking, and argument program website at http://writing.rochester.edu/.
Advice for First-Year Students

The College signed an Admission Partnership with the Simon Business School in October 2006. The Admission Partnership agreement offers students an opportunity to receive a $10,000 scholarship if they enroll in a full-time Simon MBA or MS program any time after graduation from the College. Additionally, the Simon School specifically targets students with less than three years of post-college work experience for admission into our MS programs. Candidates for the MBA program generally have several years of work experience prior to entry. Students from any academic major are eligible to apply; however, coursework in economics, accounting, calculus, and statistics is recommended, both in preparation for the MBA or MS curriculum and as an indicator of interest and aptitude for a business career. Graduate Management Admission Test (GMAT) or Graduate Record Exam (GRE) scores are considered.

The Simon MS program may be suitable for individuals with focused career goals who desire a graduate business degree with only one additional year of study. Simon offers MS degree options in finance, marketing analytics, business analytics, and accountancy. While candidates are evaluated on a variety of criteria, Simon is particularly interested in identifying candidates who show promise of leadership in tomorrow’s business world by combining a positive, can-do attitude with interpersonal skills, intellectual talent, entrepreneurial orientation, and personal integrity.

The Simon School also teams up with the College in offering a 3-2 program through which a student can earn a bachelor’s degree in the College. They earn a bachelor’s degree at the end of year four by meeting remaining elective bachelor’s degree requirements through satisfactory completion of first-year MBA coursework at Simon. The MBA degree is awarded at the end of year five. Summer internships and business-related work experience are expected of successful 3-2 applicants. The GMAT must be taken no later than January of the junior year.

For More Information

For more information on the school and its offerings, please contact the Simon School MBA and MS Admissions Office, 305 Schlegel Hall, (585) 275-3533 or email admissions@simon.rochester.edu.
Margaret Warner Graduate School of Education and Human Development

“Education is a social process. Education is growth. Education is not preparation for life; education is life itself.”  —John Dewey

Advice for First-Year Students

The Warner School is a graduate school for students with passion, commitment, and drive who aspire to improve the human condition as leaders in education, broadly conceived as supporting learning and development in a variety of contexts and across the life course. Warner prepares teachers, counselors, K–12 and higher-education administrators, helping professionals, policy analysts, educational policymakers, scholars, researchers, and consultants to enter our nation’s most challenging arena and become a powerful force for positive change and social justice.

The Warner School offers master’s and doctoral degree programs that may be of interest to undergraduates considering graduate work in education and human development. Students are encouraged to take courses in these programs as undergraduates, both to explore the interesting intellectual and career opportunities available in education and to possibly get a jump start on graduate work. Many undergraduates apply to the school’s programs in their senior year. In addition to the core programs in teaching and curriculum, counseling, human development (including a specialization in Applied Behavior Analysis (ABA), higher education, K–12 school leadership, and educational policy, Warner has interdisciplinary programs in health professions education, online teaching, and program evaluation. There is also a new certificate as well as a master’s program for undergraduates interested in teaching English abroad.

The programs tackle enduring challenges in education and human development with fresh, nontraditional approaches. Warner School students think deeply about the many ways that teaching, learning, and development shape lives and societies. By combining research and practice, we work to improve schools and institutions and to make communities more just.

While the University does not offer a bachelor’s program in education, undergraduates interested in education, counseling, and human development—and the many issues related to schools, socialization, learning, leadership, community mental health, and change—are encouraged to take courses at the Warner School. Issues such as relations among race, gender, language, ethnicity, class, disability, sexuality, and schooling; uses of technology as teaching and learning tools; interdisciplinary research and its application to human learning and development; community mental health counseling; ties among economic, social, and educational practices and policies; community-based engaged scholarship; entrepreneurship and innovation involving education; and other matters of significance to contemporary society may be studied at the Warner School.

Undergraduates are encouraged to explore Warner School courses offered in teaching and curriculum, higher education, educational policy, counseling, human development, online teaching, entrepreneurship, and health professions education. Such courses may complement undergraduate programs in the College and/or offer undergraduates the opportunity to explore new intellectual areas and career opportunities in the health, human services, and education professions. It may even be possible to begin studies for specific careers at the Warner School as an undergraduate. Starting teacher education coursework as an undergraduate provides students with the opportunity to explore and better understand the teaching profession and can allow for the completion of a master’s degree and New York State Teaching Certification in only one additional year of postgraduate study. Students are also encouraged to explore the new certificate program to teach English abroad.

The Warner School offers a number of scholarship opportunities, including time-limited 50 percent guaranteed scholarships for programs leading to New York State teaching certifications for qualified University of Rochester undergraduates who are interested in pursuing graduate study at the Warner School. For a complete listing of scholarship opportunities, visit www.warner.rochester.edu/admissions/scholarships.

In 2015, the New York State Legislature approved a law that stipulates applicants to teacher preparation programs that lead to initial teacher certification or educational leadership programs that lead to the school building leadership (SBL) or school district leadership (SDL) certification must submit official scores of a graduate school entrance examination. To be in compliance with this new New York State regulation, the Warner School requires official results from the Graduate Record Examination (GRE) or Miller Analogies Test (MAT). The Warner School is now an official testing center for the MAT, providing students and the surrounding community a place to take the nationally standardized exam in Rochester.

Students who are interested in a career in education and human development are encouraged to meet with a Warner School admissions counselor to learn more about programs and opportunities for coursework as an undergraduate. The Office of Admissions offers day and evening appointments for student counseling and school tours. The Warner School is housed in LeChase Hall, located on the historic Wilson Quadrangle between Todd Union and Wilson Commons on the River Campus.

For More Information

For more information on the school and its offerings, please contact the Warner School Office of Admissions, LeChase Hall, (585) 275-3950, e-mail admissions@warner.rochester.edu, or visit www.warner.rochester.edu.
Career Exploration and Education
The Gwen M. Greene Career and Internship Center aims to enhance individual career readiness, connect organizations and talent, and transform our communities through education and collaboration. The Greene Center assists students in achieving their individual career goals by providing them with the resources and tools needed to develop connections among their aspirations, academic pursuits, and cocurricular experiences.

Advice for First-Year Students
The Greene Center is available to assist and support students throughout their career exploration. We recommend connecting with the Greene Center by the second semester of your first year to meet with a career educator and get acquainted with our services. We can also assist you with getting started on your résumé and with the process of searching for on-campus jobs, research opportunities, and/or internships.

Career Communities
At the University, career communities are networks of partners (alumni, employers, career educators, faculty, parents, student groups, and fellow students) from a group of related industries that seek to

- educate students about roles and industry norms/culture
- share industry-specific knowledge, resources, and advice
- connect students with industry professionals and opportunities.

Students are encouraged to explore multiple career communities that align with their goals and career development.

Building Connections
Through connecting with alumni, employers, faculty, and staff, students can learn more about their chosen industries and receive advice about the skills and experiences that are needed in order to achieve success. Students can explore industries by participating in alumni networking events and attending on- and off-site programming, and through visits to local, national, and international employers facilitated by the Greene Center.

Choosing Courses: Some courses have a direct connection to specific careers and may even be required to gain entry into professional programs. For example, students interested in medicine must complete prerequisite coursework in order to apply for medical school. Still other courses can play a role in your exploration of career options and offer you the chance to build knowledge and skills for any career community. As you choose courses for your first year, consider the following:

Exploring Careers
(CAS 104, 1.0 credit, offered to second-semester first- and second-year students) This course is designed to assist students in developing the skills necessary to successfully navigate career choice and its challenges in a complex, global economy. It provides an introduction to prominent career development theories, decision-making strategies, and career readiness competencies students should develop in order to transition successfully to postgraduate opportunities, including jobs, graduate/professional school, volunteerism, and entrepreneurship. Students who complete this course walk away with a career readiness plan in hand.

Career Competencies
There are eight competencies associated with career readiness. As you select your courses, consider how they will develop your skills in the areas listed below. For more information and definitions of each competency, visit the Greene Center website at www.rochester.edu/careercenter/

- critical thinking/problem solving
- leadership
- oral/written communication
- career management
- teamwork/collaboration
- global/intercultural fluency
- digital technology
- professionalism/work ethic
Prerequisite Courses for Careers in Health Care
Schools of medicine, dentistry, and veterinary medicine, as well as physician assistant (PA) programs, have similar foundational prerequisites for admission. Because individual programs may vary, however, students should investigate the requirements of their specific programs of interest and speak with a career educator in the Greene Center.

Students can meet most prerequisites for medical, dental, veterinary, or physician assistant programs by taking any one of the sequences shown on the following page. Consult a departmental advisor to determine the most appropriate course level based on your ability and major(s) of interest. While it is important for pre-health students to get an early start on science courses, there is no “one size fits all” schedule or timetable. In general, students find greater flexibility and success when spreading prerequisite courses out over four years of study.

For questions about courses related to repeats, withdraws, S/F, AP credit, summer study, or education abroad, please see a career educator in the Greene Center.

For More Information
Subscribe to the health professions listserv. Update your profile in Handshake on the Greene Center website (www.rochester.edu/career-center/), and click the “Health Professions” tag.

Send email to urhealthprofessions@UR.rochester.edu.
NOTEWORTHY EDUCATIONAL OPTIONS

PREREQUISITE COURSES FOR MEDICAL, DENTAL, AND VET PROGRAMS

Below are options to consider in order to fulfill prerequisite coursework for most medical, dental, and veterinary programs. Please note that this is not an exhaustive list and that it is always best to speak with an advisor prior to registration.

### BIOCHEMISTRY
One semester
BIO 250 with or without lab depending on chemistry requirements as described below.

### CHEMISTRY
Competency in laboratory-based inorganic chemistry (often met by, but not limited to, introductory chemistry courses) and organic chemistry. Requirements vary depending on school.

- **Option 1:** CHM 131* CHM 132* CHM 203* CHM 204*
- **Option 2:** CHM 132* or CHM 137* CHM 203* CHM 204* BIO 250*
- **Option 3:** CHM 171* CHM 172* CHM 211* BIO 250* with AP chem credits and chem major

### MATH
Generally, one semester of statistics and calculus needed for physics.

- **Option 1:** MTH 141 MTH 142 MTH 143
- **Option 2:** MTH 161 MTH 162
- **Option 3:** MTH 162 or MTH 171

\[ \text{STT 211 or STT 212 or STT 214 or BME 221} \]

### BIOLOGY
One year of laboratory-based biology coursework

- **Option 1:** BIO 110* BIO 111
- **Option 2:** BIO 110* BIO 198*
- **Option 3:** BIO 112* BIO 113*

* BIO 198 or 190 is recommended with or without lab

### ENGLISH
Completing the primary and the upper-level writing requirements of any major will satisfy most English requirements for professional schools.

- **Option 1:** WRT 105
- **Option 2:** WRT 105E
- **Option 3:** WRT 105A WRT 105B

*Upper-level WRT requirement in the major*

### PHYSICS
Two semesters with lab (level of coursework will depend on AP credits and MTH placement).

- **Option 1:** PHY 113 PHY 114
- **Option 2:** PHY 121 PHY 122
- **Option 3:** PHY 141 PHY 142
- **Option 4:** PHY 122 PHY 123 physics major

Pre-health students should also be prepared for standardized tests (i.e. MCAT) and interview questions that address the psychosocial contexts of health. For that reason, we strongly encourage students to consider a cluster or a class from the humanities and/or social sciences. Students should meet with an advisor to discuss their options.
EDUCATION ABROAD

Students majoring in all academic disciplines may go abroad. By the time of graduation, about one third of University of Rochester undergraduates have had an international educational experience. Most students study abroad in their junior year or in the first semester of their senior year, although a number of programs are open to sophomores. Education abroad during the summer is also an option. The University offers more than 75 programs in 40 countries in Africa, Asia, Australia, Europe, Latin America, and New Zealand. There’s something for everyone!

University of Rochester students interested in education abroad experiences have an expanded and improved selection of opportunities in exchange programs. Exchange programs offer students the option of directly enrolling for a semester or year of study at select partner institutions. Direct enrollment provides undergraduates the opportunity to explore and study abroad in a more independent, self-directed way by integrating fully into the campus community as a full-time student. Consult with an education abroad advisor about exchange opportunities in Australia, Hong Kong, Japan, Macau, Peru, Poland, Singapore, South Korea, Sweden, and the United Kingdom. Students who participate in an exchange program are eligible to receive a $2,000 grant.

It’s never too early to start exploring your options. Students majoring in science and engineering are especially encouraged to begin exploring their options during their first year. The best way to find out more is to attend an education abroad general information meeting and to meet with an education abroad peer advisor. Schedules are available on our website: www.rochester.edu/abroad.

The Center for Education Abroad (CEA) is located in Dewey Hall 2-161. Feel free to call (585) 275-7532, or email abroad@rochester.edu. The CEA Staff looks forward to meeting you to help plan your experience abroad!

TAKE FIVE SCHOLARS PROGRAM

The Take Five Scholars Program, unique to the University of Rochester, provides free tuition for an additional year or semester of study designed to enrich a student’s curriculum. Admitted students pursue a sustained and coherent interdisciplinary topic of intellectual interest. Take Five offers an opportunity to learn for the joy of learning alone: Take Five courses may not be used to complete Rochester curriculum requirements, major requirements, or prepare for graduate school. Students may submit an application—once they’ve been admitted into a major—until the fall semester of their senior year. Some sample program titles include “Media and Its Effect on Gender Roles and Perceptions,” “Chinese Sign Language Comparison and Analysis,” and “The Intricate Puzzle of the Mind.” Since its inception in 1986, more than 1,100 undergraduate students from the River Campus and the Eastman School of Music have become Take Five Scholars. There is currently no limit to the number of students accepted into the program, and new students are admitted each semester.

KAUFFMAN ENTREPRENEURIAL YEAR (KEY) PROGRAM

The University of Rochester defines entrepreneurship as the “transformation of an idea into an enterprise that generates value”—intellectual, social, cultural, or economic. More than just a discrete set of business skills or practices, entrepreneurship is a way of thinking and approaching problems. The KEY Program provides selected students with the opportunity to devote one or two semesters, tuition-free, in their fifth year to the study and practice of entrepreneurship. Students may propose to participate in internships, special projects, business plan development, research into various facets of entrepreneurship, or analysis of how culture and public policy influence entrepreneurial activity. Applications may be submitted once students have been accepted into a major, and up to the fall semester of the senior year.

CERTIFICATE AND CITATION PROGRAMS

Certificate programs are taken in conjunction with, not in place of, majors. They are meant to supplement a student’s chosen area of study and to formalize into a coherent whole, courses taken outside the area of the major. Specific requirements for each program are listed in the Undergraduate Bulletin.

Certificate programs approved by the College and administered through the Multidisciplinary Studies Center (MSC) are:

- **Actuarial Studies**: 7 courses and 2.5 GPA required. Must also demonstrate computer proficiency.
- **Mathematical Modeling in Political Science and Economics**: 9–10 courses and 2.0 GPA required.

Note that courses used toward these certificates may not be taken on the S/F option. Completion of one of these certificates appears as a notation on the transcript. Handouts concerning these certificates are available at the Multidisciplinary Studies Center in 4209B Dewey, and details are on its website at www.rochester.edu/college/msc/.

Other certificate programs available to students are:

- **Biophysics** (administered through a Bio/Medphysics Committee in the Department of Physics and Astronomy)
- **Biotechnology** (administered through the Program in Biology and Medicine in Room 402 Hutchison Hall)
• Medphysics (administered through a Bio/Medphysics Committee in the Department of Physics and Astronomy)

• Stage Management (administered by the Department of English)

    Certain certificate programs are authorized clusters. See the Cluster Search Engine for details: www.rochester.edu/college/ccas/clusters/.

    Note also the following:

Citation for Achievement in College Leadership
This program recognizes those students who have developed leadership skills through specific academic study coupled with specific practical application. Students need to complete at least three different leadership experiences. Each leadership experience has two components:

1. An academic course (2-credit minimum) to prepare students for specific leadership work.

2. A specific leadership practicum to implement ideas from the preparatory course.

Completion of the citation will appear as a notation on the transcript.

A handout that includes all academic and practical components that have been authorized for use toward this citation is available at the Academic Services Counter in 312 Lattimore.

CITATION IN COMMUNITY-ENGAGED SCHOLARSHIP

Through pursuing an academic citation in community-engaged scholarship, students passionate about integrated learning and responding to community-identified needs are able to design a course of study and practice that complements the Rochester Curriculum and their chosen areas of study. The citation is designed to contextualize abstract theories, develop critical skills, and challenge assumptions that will prepare students to be effective agents of social change here at the University of Rochester and beyond. Requirements for successful completion include two 2-credit seminars in community-engaged scholarship, 12 credits of community-engaged coursework, and a community-engaged capstone typically undertaken in a student’s senior year. Community-engaged scholars develop deep and meaningful relationships with their peers, faculty, and community partners while completing their course of study. The citation is a collaboration among the Rochester Center for Community Leadership, academic departments, and community partners across the bridge and across the globe. The Rochester Center for Community Leadership is located at 107 Lattimore Hall and atcommunity.leadership@rochester.edu. Advisors are eager to meet with students to discuss interests and goals to make the most of their time in Rochester.

PRESTIGIOUS FELLOWSHIPS AND SCHOLARSHIPS

The Fellowships Office, located in 4-209B Dewey Hall, coordinates our advising program for prestigious national and international academic competitions such as the Beinecke, Gaither (formerly Carnegie) Junior, Churchill, Critical Language, Davis Projects for Peace, Fulbright, Gates Cambridge, Goldwater, Marshall, NSF, Rhodes, RISE, Schwarzman, Soros, Truman, and Udall. Funding for these highly selective programs comes from various public and private sources outside of the University, including international sponsors. The award programs provide fellowships and scholarships based on academic merit in addition to other criteria, including distinctive achievements in research, campus involvement, leadership, community service, and civic engagement. A few programs also consider financial need status. Some fellowships can only be used in the United States, but there are also programs for international experiences. Some of these programs provide funds to support undergraduate-level study and research, while others support advanced study and career development opportunities after the completion of a bachelor’s degree. The Fellowships Office maintains information on and advises students applying for a selected group of high-profile awards. Becoming aware of these opportunities early in one’s undergraduate career is key to presenting a competitive application. Rochester students have been successful in many of these competitions, and you can join the list of winners.

The director of fellowships invites students with outstanding academic and extracurricular records to apply for appropriate fellowships and scholarships; our professional staff mentor candidates throughout the application process. Applications often need to be started several months in advance of national deadlines. Students interested in learning more about these awards and the application process may attend an information session, visit the fellowships website at www.rochester.edu/college/studentfellowships, or stop by the Fellowships Office in 4-209B Dewey Hall. Follow us also on Facebook and Twitter at /URFellowships. After reviewing published informational materials, students are encouraged to take the next step of visiting the office to discuss specific awards in light of their individual academic interests and aspirations.

Maybe there’s a Critical Language Scholarship, Goldwater, Fulbright, or Rhodes in your future. Your first year is the perfect time to begin preparing for these potentially life-changing opportunities.

SENIOR SCHOLARS RESEARCH PROGRAM

Have you considered in-depth research in an area of interest? Students admitted to this program are able to devote their entire final year of college to work on a single intellectual project. The project may include coursework in addition to independent study. The nature of the project can range from scholarly research to artistic creativity and should draw and build upon a student’s career through the junior year. The project is composed and carried out under the supervision of a faculty advisor or advisors and reviewed by the Senior Scholars Committee. The formal application proposal takes place in spring of the junior year, although students are encouraged to meet with an advisor at any time to discuss the program. Contact the Center for Education Abroad, 2-161 Dewey Hall, for more information.
