New medical plan enrollment deadline May 15; insurance effective July 1

Starting July 1, 1996, the University of Rochester Medical Plans will change and employees will be offered a wider variety of options for their medical coverage. The changes include:

1. Three new medical plans (Blue Choice Select with Extended Benefits, Preferred Care Community with Extended Benefits, and Blue Cross and Blue Shield Comprehensive)
2. Modifications to the existing medical plans (Blue Choice with University of Rochester Major Medical, Preferred Care with University of Rochester Major Medical, Blue Cross and Blue Shield with University of Rochester Medical, and Blue Choice)
3. Medical and dental coverages will be extended to domestic partners of employees and any children that the domestic partner brings into the partnership. The coverage is available to a person living with the employee as a domestic partner, with whom the employee cannot legally marry, e.g., partner of the same sex.
4. The part-time faculty and staff were mailed a medical plans packet this month which included a Medical Plans Enrollment Guide. The enrollment guide provides a description of the three new medical plan options, details the modifications made to the existing University of Rochester medical plans, and includes a side-by-side comparison chart of the coverages provided by each of the six plans. (Benefits will also be sent a packet that includes their medical plans options.)

The enrollment guide also contains information about the new HMO, StrongCare, that will be available January 1, 1997. StrongCare will have two medical plans similar to Blue Choice and Blue Choice Select, but will be lower in premium costs.

Informational/enrollment sessions will be held throughout the University where representatives from the medical insurance carriers and representatives from the University of Rochester Benefits Office will be available to answer questions. The dates, times and locations for these sessions are listed below. Faculty and staff members may sign up at any time to speak with the representatives personally. You may attend any one of the informational/enrollment sessions. Two special informational/enrollment sessions will be held for retirees.

For those who want to change their medical plan option, completed enrollment forms must be submitted to the Benefits Office, Box 636, Medical Center, G4011, by May 13, 1996. The next enrollment will begin to go into effect July 1, 1996.

For those who do not wish to change their current medical plan enrollment, no forms need to be completed. However, those modifications made to the current plans’ coverage effective July 1, 1996, faculty and staff need to carefully review the enrollment guide.

Individuals represented by collective bargaining agreements receive benefits in accordance with those agreements.

Three undergrads tops in debate

Students on the University debate team won three of the top 10 places in the Novice National Championships in Towsen, Md., last month. Approximately 150 debaters from colleges and universities in the United States participated. George Walker, a junior in psychology, took top honors in the national competition for oral advocacy and critical thinking. The Rochester team is widely recognized as one of the strongest novice squads in the country and has obtained notable varsity success.

Alumnus Walker wins Pulitzer in music

George Walker, who in 1956 earned a doctorate at the Eastman School, has won the 1996 Pulitzer Prize in Music for his composition, El lawn, a piece for solo violin and orchestra. Walker is the first black composer and the eighth Eastman-affiliated composer to win the prestigious honor since its inception in 1949. The music award carries a $3,000 prize and global prestige. Walker, now 73, has kept a full-time career as a pianist, composer and educator. After graduating from Oberlin, he was admitted to the Curtis Institute, where he was a pupil of Rudolph Serkin and Rosario Scalzo. In 1945, he made a New York recital debut in Town Hall, followed two weeks later by a debut performance with the Philadelphia Orchestra under Eugene Ormandy. He toured Europe for several years, then began his studies at Eastman. After graduation, he returned to Europe on Fulbright and John Hay Whitney fellowships to study with Nadia Boulanger.

Walker has held academic appointments at Smith College, the University of Colorado, Peabody Institute, and the University of Delaware. His primary academic association has been with Rutgers University as professor of music. He has been represented from Rutgers as Professor Emeritus in 1992.

He has published over 70 works in a variety of compositional forms. His music has been performed by virtually every important orchestra in this country and England.

RCC begins campus improvement review

The Residential College Commission (RCC) will begin a “town meeting” in Hoyt Auditorium tonight, Monday, April 22, at 8:00 p.m., to hear from students about the status of the undergraduate experience at Rochester. The meeting, an opportunity for students to express their opinions about all aspects of the residential experience, is one of RCC’s first steps toward fulfilling its mission to improve the undergraduate experience at Rochester.

Earlier this year, President Jackson and Provost Phelps charged the 21-member commission with producing a vision and a plan for a long-term role of educational technology in the classroom and in the residential experience. The review will also consider the role of educational technology in the classroom and in the residential experience.

Following this process, the commission will eventually recommend programmatic, policy, and structural changes to improve the educational quality of the undergraduate residential experience on the River Campus. Preliminary recommendations from the commission are expected by the end of June, says Provost Phelps, with a final report due by February 1, 1997.

The commission has a web page—http://www.rochester.edu/arc/RCC/—to keep the continued on page two

Kurt Vonnegut to speak at University

Kurt Vonnegut, the American writer best known for Slaughterhouse Five, his novel published in 1969, will speak at the University on Wednesday, April 24. The talk, How to Get a Job Like Mine, will be held at 8:00 p.m. in Strong Auditorium. Sign language interpretation will be available.

Vonnegut has written 13 other novels and two non-fiction, including Language in the Time of the Cuckoo and Galapagos. He is the author of the script to the teleplay desktop, a comical look at daily life with a Twist.

Vonnegut’s 1962 work, Mother Night, is being made into a film starring Nick Nolte, Alan Arkin, and John Goodman. The film is a free and open to the public, but tickets are required. They will be available to University students starting Wednesday, April 17, and to students, faculty and staff the following day; tickets remaining will be available to the public starting at 9 a.m., Friday, April 19, at the information desk in Wilson Commons.

Research studies nuclear products

A new study by Rochester researchers shows that byproducts of nuclear activities can remain in the environment longer than previously thought. A team led by Fred Fehn, professor of earth and environmental sciences, and the Department of Earth and Environmental Sciences, and graduate student Usha Rana is investigating a new way to trace nuclear emissions as they work their way through the environment. Fehn and Rana are making measurements using accelerator mass spectrometry (AMS), a tech- nique pioneered at the University.

The team measured concentrations of iodine-129 (I-129) in New York and adjoining states. I-129 is a long-lived radioactive isotope produced by the fission of uranium in nuclear reactors.

Fehn and Rana found enhanced levels of I-129 more than 125 miles from its source at West Valley in New York State, over a two-by-three mile area. This indicates that those facilities are not leaking nuclear byproducts into the environment, Fehn says, and that the elevated levels found in western New York can be attributed to leakage from West Valley: “I-129 released to the air from smokestack emissions during the operation of the site has now spread throughout western New York,” says Fehn. “It is surprising to find that the signal is still detectable both around the site and in western- New York more than 20 years after re- processing activities at the facility ended.”

In Brief

Education technology

Several major computer and computer-software companies will present their products to students, administrators, and computer advocates at a technology fair on Tuesday, July 9, from 8 a.m. to 7 p.m. in the Music-Rehearsal Room in Wilson Commons.

Exhibitors will include Apple, Compaq, CompUSA, Entre.NET, and Microsoft-Packard.

The fair is open to the public.

For more information, call x8270.

Anxiety disorders screening

The Department of Psychiatry will hold an Anxiety Disorders Screening Day on Wednesday, May 1, in Room 1-401, Medical Center. Two sessions will be held, the first from 10 a.m. to 1 p.m. and the second from 6 to 8 p.m. Participants will watch a videotape and a pre- sentation on the disorders and complete a self- report questionnaire. Informational brochures will be available for questions and referrals.

For more information, call x4967.

New ID cards

Students, faculty, and staff are being asked to re- place their old ID cards with new ones created on a new system. To help speed the conversion process, new office hours, from 9 a.m. to 5 p.m. daily, are now in effect at the Campus Center.

People in surrounding areas, and who were found at elevated levels as far as the eastern edge of the Finger Lakes, more than 125 miles away. Those levels increased steadily closer to West Valley, in the two creeks that drain the land sur- rounding the facility. Batrematic and Canandaigua creeks. I-129 levels are about 10,000 times higher than background levels.

The team found that I-129 levels are not el- emented near two nuclear power plants near Lake Ontario in western New York, Nine Mile Point in Oswego and Ginna near Rochester, or near any of the two or three small reactors in upstate New York. Ohio. This indicates that those facilities are not leaking nuclear byproducts into the environment, Fehn says, and that the elevated levels found in western New York can be attributed to leakage from West Valley: “I-129 released to the air from smokestack emissions during the operation of the site has now spread throughout western New York,” says Fehn. “It is surprising to find that the signal is still detectable both around the site and in western- New York more than 20 years after re- processing activities at the facility ended.”
