

Windows Mobile Configuration for UR_RC_InternalSecure (early release)

There are no screen shots for Windows Mobile at this time.

1. Click the start button which appears as the windows logo “flag” in the upper left corner; then click “Settings”;
2. Click the “Connections” tab at the bottom of the screen;
3. Click the “WiFi” icon;
4. You will get a list of available wireless networks. If UR_RC_InternalSecure does not appear, click the “Add New...” line;
5. In the “Network Name” field, type “UR_RC_InternalSecure”; in the “Connects to” field, either “The Internet” or “Work” are acceptable from the pulldown menu;
6. Leave “This is a hidden network” unchecked;
7. Click “Next” in the bottom right-side of the screen;
8. In the “Authentication” field select “WPA_PSK” from the pulldown menu;
9. In the “Data Encryption” field, select “TKIP” from the pulldown menu;
10. In the “Network key” field, type “URWireless” with the uppercase and lowercase exactly as specified;
11. Click “Next” in the lower right portion of the screen;
12. Click “Finish” in the lower right portion of the screen.
13. You will see the screen that you saw in step # 3, and upon connection, you will see “UR_RC_InternalSecure” as “Connected”;
14. Click the “OK” indicator at upper right portion of that window and you’ll return connected and ready to use applications.
