POLICY

1. **Purpose**
   This policy describes the requirements for Investigators to appropriately obtain informed consent and document the consent process, including requests for waivers or alterations of the consent process. In addition, this policy describes the requirements for the RSRB to evaluate the consent process when approving research as the Reviewing IRB.

2. **Scope**
   This policy applies to all human subject research conducted or supported by employees or agents of the University of Rochester (UR), the RSRB, and the RSRB office.
   
   - The informed consent requirements in this policy do not preempt any applicable Federal, state, or local laws that require additional information to be disclosed in order for informed consent to be legally effective.
   
   - Nothing in this policy is intended to limit the authority of a physician to provide emergency medical care, to the extent the physician is permitted to do so under applicable Federal, state, or local law.

3. **Definitions**
   3.1. **Informed Consent** – An ongoing process of information exchange that takes place between the potential subject and the Investigator, which begins at the time the potential subject initially learns about the research and continues throughout the course of the study.

4. **References**
   4.1. HHS 45 CFR 46.116; HHS 45 CFR 46.117; FDA 21 CFR 50.20; FDA 21 CFR 50.25; FDA 21 CFR50.3(k) and 56.102(j); New York State Law Article 24-A Section 2442
   4.2. Policy 404 Criteria for Approval of Research; Policy 504 IRB Reliance and Collaborative Research; Policy 601 Research Involving Children; Policy 604 Research Involving Adults with Decisional Impairment; Policy 703 Recruitment and Subject Payment;
   4.4. RSRB Protocol Templates; RSRB Consent Form Templates
5. Responsibilities

5.1. Investigators have a legal and ethical obligation to ensure the following in regard to informed consent in accordance with federal regulations HHS 45 CFR 46.116, FDA 21 CFR 50.20, NYS Law Article 24-A Section 2442, institutional policies, and the Guideline for Informed Consent:

5.1.1. That a prospective subject, or subject’s legally authorized representative, has sufficient knowledge and comprehension of the elements of informed consent to enable them to make an informed decision [HHS 45 CFR 46.116(a)(1-8)].

5.1.2. The information must be provided in a language understandable to the subject, or the subject’s legally authorized representative.

5.1.3. When enrolling non-English speaking subjects, all consent documents and relevant subject completed forms are translated into the language understandable to that study population.

5.1.4. In addition to 5.1.1 and 5.2.1 above, for research involving adults with decisional impairment, to allow participation in research if a legally authorized representative is delegated according to Policy 604 Research Involving Adults with Decisional Impairment.

5.1.5. In addition to 5.1.1 and 5.2.1 above, for research involving children, to allow permission for a child to participate in research according to Policy 601 Research Involving Children.

5.2. When the RSRB is the Reviewing IRB, the RSRB is responsible for determining whether the research satisfies the criteria for approval relevant to the process for obtaining informed consent, as well as the criteria for approval relevant to appropriate documentation of consent, according to federal regulations, Policy 404 Criteria for Approval of Research, and the Guideline for Informed Consent when reviewing protocol materials at the time of initial and continuing review, and when reviewing amendments to research.

5.3. When the RSRB is the Relying IRB, the RSRB is responsible for reviewing the consent form(s) to ensure compliance with institutional review requirements described in Policy 504 IRB Reliance and Collaborative Research.

6. General Requirements for Informed Consent

6.1. The Investigator must obtain legally effective informed consent of the subject, or the subject’s legally authorized representative, before involving a human subject in research.

6.2. The Investigator must provide a description of the process for obtaining and documenting informed consent and provide all consent documents to the Reviewing IRB for review and approval.
6.2.1. All required elements and applicable additional elements of consent, as well as additional institutional and regulatory considerations, listed in Sections 6.3 – 6.7 below must be included, unless a waiver or alteration of the elements of informed consent (Section 7) or waiver of documentation of consent (Section 8) is requested by the Investigator.

6.2.2. Recruitment methods and materials are considered part of the informed consent process and must be submitted to the RSRB (see Policy 703 Recruitment and Subject Payment).

6.2.3. RSRB Protocol Templates and RSRB Consent Form Templates are available to researchers to help ensure required elements and standard institutional language is incorporated into the documents.

6.3. The Investigator will include the following basic elements of informed consent required by federal regulations HHS 45 CFR 46.116(a) and, for FDA regulated studies 21 CFR 50.2

6.3.1. An introduction that indicates the study involves research; explanation of the purpose of the research; and, description of study procedures, which includes identification of research procedures, as well as those that are investigational or standard of care procedures.

6.3.2. A description of any reasonably foreseeable risks or discomforts to the subject;

6.3.3. A description of any benefits to the subject or to others which might reasonably be expected from the research;

6.3.4. Appropriate alternatives (procedures or course of treatment), if any, that might be advantageous to the subject (not applicable if the only alternative is not to participate);

6.3.5. Description of the extent to which confidentiality of records identifying the subject will be maintained;

6.3.6. For research involving more than minimal risk, indication whether any compensation for injury or medical treatment will be provided if injury occurs;

6.3.7. Contact persons for questions about the research, whom to contact in the event of a research-related injury, and whom to contact for questions about subject’s rights; and,

6.3.8. A statement that participation is voluntary, refusal to participate involves no penalty or loss of benefits to which subject is otherwise entitled, and the subject may discontinue participation at any time without penalty or loss of benefits.

6.4. The Investigator will include the following additional elements of informed consent, as applicable to the study [HHS 45 CFR 46.116(b)], and for FDA regulated studies 21 CFR 50.25(b) only 6.4.1 through 6.4.6 apply]:

6.4.1. A statement that the treatment or procedure may involve unforeseeable risks to the subject (or to the embryo or fetus, if the subject is or may become pregnant);
6.4.2. Circumstances under which the subject’s participation may be terminated by the Investigator without regard to the subject’s or the subject’s legally authorized representative’s consent;

6.4.3. **Additional costs** to the subject to participate;

6.4.4. **Consequences of subject withdrawal** from the study, including procedures for withdrawal that may be necessary to protect the subject’s safety;

6.4.5. A statement that **significant new findings** which may relate to the subject’s willingness to continue participation will be provided to the subject.

6.4.6. Approximate **number of subjects** in the study;

6.5. For FDA regulated research, the Investigator will apply the following **additional elements** of informed consent, when applicable:

6.5.1. A statement that the test article is “investigational” or “not FDA-approved”;

6.5.2. No claims may be made which state or imply, directly or indirectly, that the test article is safe or effective for the purpose(s) under investigation or that the product is in any way superior to another product;

6.5.3. Description of any plans for randomization;

6.5.4. Description of any plans for use of placebo and the probability of the subject receiving the test article or the placebo;

6.5.5. For applicable FDA regulated research, a statement regarding study registration at ClinicalTrials.gov;

6.5.6. Conditions for breaking the code, if the study is blinded;

6.5.7. For phase I studies, disclosure that the purpose of the research includes examining the safety and toxicity of the test article;

6.5.8. For phase II and phase III studies, the consent document must disclose that the purpose of the research includes examining the test article for safety and efficacy.

6.6. The Investigator will include the following additional elements of informed consent required by the University of Rochester:

6.6.1. HIPAA Authorization, if applicable (see Policy 702 HIPAA Privacy Rule);

6.6.2. A statement that subjects will be given a copy of the consent form, if the consent is written (when the consent includes HIPAA Authorization, it must be a signed copy);

6.6.3. Identification of the entity sponsoring the study, for sponsor-initiated studies;

6.6.4. Whether subjects are paid, and if so, the amount of payment and how/when payments are made;

6.6.5. A disclosure statement regarding any financial conflicts of interest, for both the Investigator and the University, as applicable;

6.6.6. Additional information as indicated in the RSRB Consent Form Template(s) (i.e., Biomedical Consent Form Template, Non-biomedical Consent Form Template, or Permission Form Template).
6.7. For additional consent issues and considerations pertaining to vulnerable research populations and special types of study procedures, Investigators should also refer to the following policies and guidelines, as applicable:

6.7.1. Policy 601 Research Involving Children
6.7.2. Policy 602 Research Involving Pregnant Women, Fetuses and Neonates
6.7.3. Policy 604 Research Involving Adults with Decisional Impairment
6.7.4. Policy 608 Research Involving Genetic Testing and Gene Transfer and the Consent for Genetic Testing Template Language
6.7.5. Guideline for Research Involving HIV Testing
6.7.6. Guideline for Research Involving Repositories (for research involving specimen or data banking)

6.8. When the RSRB is the Reviewing IRB, the RSRB will review the protocol materials to evaluate the consent process and ensure that it is adequate and meets the criteria for approval according to Policy 404 Criteria for Approval of Research, and other policies as applicable, including but not limited to the following determinations, when applicable [HHS 45 CFR 46.116, FDA 21 CFR 56.111]:

6.8.1. The Investigator will obtain legally effective consent from the subject, or subject’s legally authorized representative;
6.8.2. The consent process provides sufficient opportunity for the subject, or subject’s legally authorized representative, to consider whether to participate, and minimizes the possibility of coercion or undue influence;
6.8.3. The information communicated to the subject, or subject’s legally authorized representative, is provided in a language understandable to the subject or representative;
6.8.4. The information communicated to the subject, or subject’s legally authorized representative, doesn’t include exculpatory language through which the subject or representative is made to waive, or appear to waive, any legal rights, or appears to release, the Investigator, Sponsor, University, or its agents from liability for negligence.

7. Documentation of Informed Consent when the RSRB is the Reviewing IRB

7.1. Documentation of informed consent must be obtained using one of the following methods:

7.1.1. A written consent form approved by the Reviewing IRB and signed by the subject, or subject’s legally authorized representative [45 CFR 46.117(a) and 21 CFR 50.27(a)] before any research procedures may begin, unless a waiver of documentation of consent has been granted (see Section 8).
   - The RSRB will consider when the signature of the person obtaining consent is required or when an alternative method may be used to document the signature of the person obtaining consent.

Paper copies of the Policy may not be the current version. The current version of this Policy is maintained and available on the OHSP shared network.
7.1.2. A short form written consent form which states that all elements of consent (see Sections 6.2 and 6.3) were presented orally to the subject, or subject’s authorized representative.

- The Reviewing IRB will approve a written summary of what is to be said to the subject. The consent form often represents this written summary.
- Only the short form requires signature by the subject, or subject’s authorized representative.
- A witness is required when this process of informed consent is used. The witness must sign both the short form and the summary document.
- The person obtaining consent is required to sign the summary document.

7.2. When obtaining consent, the Investigator is responsible for giving the subject, or subject’s authorized representative, adequate opportunity to read an informed consent form before it is signed. The form may, alternatively, be read to the person providing consent.

7.3. After written documentation of consent is obtained, the person signing consent (i.e., subject or subject’s legally authorized representative) must receive a copy of the entire consent document, unless a waiver or alteration of the elements of informed consent has been granted (see Section 8). This also applies to use of short form written consent, in which case a copy of both the short form and the summary document must be provided.

7.3.1. If the consent document includes HIPAA Authorization, a signed copy must be provided.

8. Waiver or Alteration of Informed Consent Requirements when the RSRB is the Reviewing IRB

8.1. The RSRB may waive or alter some or all requirements for obtaining informed consent, provided the RSRB finds and documents that the research meets the criteria of 8.1.1 or 8.1.2 below, or 8.1.3 below for FDA regulated research [FDA Guidance, July 2017 – IRB Waiver or Alteration of Informed Consent for Clinical Investigations Involving No More Than Minimal Risk to Human Subjects]:

8.1.1. The research meets all of the following criteria [45 CFR 46.116(d)]:

- The research involves no more than minimal risk to the subjects;
- The waiver will not adversely affect the rights and welfare of the subjects,
- The research could not practicably be carried out without the waiver, and
- When appropriate, the subjects will provided with additional pertinent information after participation.

8.1.2. The research is to be conducted by or under the approval of state or local government officials, the research could not practicably be carried out without the
waiver or alteration, and the research is designed to study, evaluate, or otherwise examine [45 CFR 46.116(c)]:
- Public benefit or service programs;
- Procedures for obtaining benefits or services under those programs;
- Possible changes in or alternatives to those programs or procedures; or
- Possible changes in methods or levels of payment for benefits or services under those programs.

8.1.3. The research is FDA regulated and meets all of the following criteria:
- The clinical investigation involves no more than minimal risk [as defined in 21CFR50.3(k) or 56.102(j)] to the subjects;
- The waiver or alteration will not adversely affect the rights and welfare of the subjects;
- The clinical investigation could not practicably be carried out without the waiver or alteration; and
- When appropriate, the subjects will provided with additional pertinent information after participation.

8.2. For FDA-regulated research, the requirements for obtaining informed consent for expanded access of investigational drugs or devices in the clinical treatment of patients are outlined in Policy 605 Research Involving FDA Regulated Drug, Biologics, and Supplements and Policy 606 Research Involving FDA Regulated Devices. Refer also to the RSRB Treatment Use Consent Template.

8.3. For FDA-regulated research, the exceptions to informed consent requirements for emergency use of a test article are outlined in Policy 607 Emergency Use of Investigational Drugs, Biologics, and Medical Devices. Refer also to the RSRB Emergency Use Consent Template.

8.4. For FDA-regulated emergency research requiring waiver of informed consent [FDA 21CFR50.24], refer to the Guideline for Informed Consent.

8.5. For FDA-regulated in vitro diagnostics (IVD) device investigations, it is possible in certain circumstances to conduct research without informed consent using leftover specimens, as long as the subject cannot be identified and where results of the investigational test are not communicated to or otherwise associated with the identified subject (Informed Consent for In Vitro Diagnostic Device Studies Using Leftover Human Specimens that are Not Individually Identifiable).
9. Waiver of Documentation of Informed Consent when the RSRB is the Reviewing IRB

Note: For FDA regulated research, the RSRB may only waive documentation of informed consent under Section 9.1.2 below.

9.1. The RSRB may waive the requirements for documentation of informed consent provided the RSRB finds and documents that the research meets one of the criteria below, as applicable:

9.1.1. That the only record linking the subject and the research is the consent document and the principal risk is potential harm from breach of confidentiality [45 CFR 46.117(c)], or

9.1.2. That the research presents no more than minimal risk of harm to subjects and involves no procedures for which written consent is normally required outside the research context [45 CFR 46.117(c) and 21 CFR 56.109(c)].

9.2. If the RSRB waives the requirement for documentation of informed consent, the RSRB may require the Investigator to provide subjects with a written description of the study (see Consent Form Templates for sample Information Sheets).

10. Informed Consent for Deception Research when the RSRB is the Reviewing IRB

10.1. The Investigator must provide an adequate description and rationale for the procedures to be conducted, in addition to fulfilling the requirements for an alteration of the elements of informed consent (see Section 8) or waiver of documentation of consent (see Section 9).

10.2. The Investigator must provide the consent documents that will be utilized before the study procedures begin (see RSRB Consent Form to Procedures Template), as well as those used at the conclusion of participation (see RSRB Consent Form to Data Use Template). See the Guideline for Informed Consent.

11. Use of Non-English Consent Forms when the RSRB is the Reviewing IRB

11.1. Enrollment of non-English speaking subjects (one or more) requires that the consent, document and any relevant subject completed materials, must be translated into a language understandable to the subject and RSRB approved prior to use.

11.1.1. The Investigator must determine that the lack of English proficiency will not affect a subject’s ability to make an informed and voluntary decision to participate in the study, or the ability to report problems or adverse events, when considering whether enrollment of the non-English speaking subjects is appropriate.
11.1.2. The RSRB may permit the use of a short form (See Section 6.9.2), in conjunction with the English consent form, for conducting an oral presentation of informed consent when an Investigator needs to unexpectedly enroll a subject who does not read and/or speak English (e.g., when clinical care or treatment is part of the research). See the Guideline for Informed Consent when proposing the use of a short form.

11.1.3. The short form may only be used for the initial presentation of informed consent and to obtain the subject’s consent to participate. Once the subject is enrolled, the informed consent, and any relevant subject completed materials, must be translated into the language understandable to the subject and RSRB approved prior to use.

12. Certificates of Confidentiality

12.1. Certificates of Confidentiality (CoC) are automatically issued by the National Institutes of Health (NIH) for NIH-funded research, according to the NIH Policy for Issuing Certificates of Confidentiality, to protect identifiable research information from forced disclosure. NIH will also consider requests for Certificates for non-federally funded research.

12.1.1. Certificates do not protect against voluntary disclosures by the subject or researcher; however, those disclosures must be specified in the consent document (e.g., evidence of child abuse or a subject’s threatened violence to self or others).

12.2. The Biomedical Consent Form template and the Non-Biomedical Consent Form template provides standard language to include in the informed consent document for NIH funded research or when a CoC is issued.
Office for Human Subject Protection

Research Subjects Review Board  Effective Date: 06/20/2018
Informed Consent  Policy 701  Version: 2.0

Originator/Authors:  
Emily Flagg, Senior Regulatory Specialist

Appendices:  
None

Revision History:  
06/2018: Sect 2 added exceptions to the scope; Sect 4 added hyperlinks; added language throughout for Reviewing versus Relying IRB; Sect 12 revised per NIH CoC policy; additional administrative and editorial changes throughout for clarifications and relevance to regulations and current practice.
