AS&E Fall 2020 Academic Policies

The document below outlines policies for AS&E courses at the undergraduate and graduate level for fall 2020. Questions on these policies can be sent to Alan Czaplicki (alan.czaplicki@rochester.edu) in the Dean’s Office.

Deletion of Video Recordings ................................................................................................. 23
General Information

Departmental Decision-Making on Courses and Course Content

Departments continue to have discretion to determine course offerings and appropriate instructors for courses. These decisions should continue to be made in relation to the needs of departmental academic programs and other departments’ programs when applicable (e.g. service courses). Departments should also consider the ability of majors to successfully complete their degree based on their course offerings. Courses critical to the completion of degree should not be cancelled unless no other option is available.

Departments should evaluate whether supplementary instruction will be necessary (either this semester or in the future), especially for “hands-on” components (labs, workshops, studios, performances), for any courses offered in a fully online format. Departments should plan and schedule this additional instruction based on their assessment of student needs. (See section on “Use of Incomplete Grades for Laboratory and Studio Courses” for information on grading related to additional instruction.)

Departments and individual faculty continue to have control over course content, but are required to follow AS&E rules about course modality (format), use of technology (e.g. Zoom), and College policies (e.g. S/F policy, deadlines for add/drop, etc.).

Contingency Plans for Fall 2020 Instructors

The Dean's Office requires that departments and programs develop contingency plans in the case of instructor illness for fall 2020 courses. Departments and programs should identify an alternative instructor for their fall courses. This information should be held in the department but available for sharing with the Dean's Office upon request. It is also important that departments and programs have, at minimum, all syllabi for fall 2020 courses to provide to alternative instructors. Departments should also facilitate quick access to other course materials (Blackboard, assignments, grades, etc.) for use by alternative instructors.

If an alternative instructor is not available, departments and programs must determine how they will manage the loss of an instructor due to illness. This should include plans for how to manage this situation at the beginning, in the middle, and towards the end of the course, as the most appropriate course of action may change across these time periods. This includes indicating possible alternative courses for students if the course is completely cancelled.

This type of planning is necessary for all fall 2020 courses, and departments should pay special attention to highly subscribed and/or required courses.

Departments must notify to the Dean's Office if a change in instructor is required. This information (current instructor, course, replacement instructor) should be emailed to Alan Czaplicki (alan.czaplicki@rochester.edu).
Student Arrival in Fall 2020

It is quite likely that some international students will not be able to arrive on time, or at all, for the fall semester. Domestic students may also have difficulties in arriving if they are from states that are on the NYS mandatory quarantine list. Instructors should plan to provide these students with online equivalent instruction (as much as possible) for any on-campus content that these students may miss. This may include asynchronous recordings of lectures and recitations, videos of experiments and other laboratory activities, alternative written assignments or readings to facilitate learning key concepts, etc. These equivalent activities should allow students learning remotely to meet the learning objectives of the course similarly to students on campus.

International and domestic undergraduate students arriving after the start of the term will be scheduled to arrive in “batches” to facilitate any quarantine, housing, and related needs. This will mean that students will also enter in-person class sessions in this same batched pattern. It is anticipated that there will be two to three such batch arrivals during the semester. These dates will be communicated out to instructors once finalized.

Student Requests to Learn Remotely in Fall 2020 Courses

Undergraduate and graduate students have been given the opportunity to indicate if they need to learn remotely for the semester. Students have been asked to submit an online form to record their choice for the semester and will be able to contact the Dean’s Office to modify their choice due to changing circumstances through the start of the semester (e.g. those who will be returning later in the semester due to visa/travel issues).

It is expected that students will make these choices based on their best assessment of their current situation. This may change as the student’s situation changes. In those cases, instructors should accommodate students changing circumstances and needs. In particular, students deciding to attend courses in-person based on changing circumstances should be allowed to, assuming that they have met any mandatory quarantine (or other) requirements set by the University.

Instructors retain the right to modify assignments (e.g. group activities) and grading in response to a student’s transition to in-person or remote learning during the semester. Any changes in requirements or grading must be clearly communicated to that student.

Tracking of Remote Learners in Courses

As noted above, AS&E will be tracking which students are learning remotely in fall 2020. Undergraduate and graduate students will be coded in UR Student as remote learners via information collected through a student survey. This information will be added to course rosters to assist instructors in developing and targeting online course elements for this group of students. Students will be coded as being in-person at the start of the semester, arriving “late” on campus in the semester (e.g. in the first few weeks of the semester), and learning remotely.

Uncertainties about visa status and ability to travel to the United States mean that it is very likely that this information will not be available until mid-August. Instructors should assume that a small, but
significant, number of students in their courses will need to learn remotely. GEPA and the College can update instructors once this information becomes available.
General Academic Policies

Academic Calendar and Instruction

Full semester courses:

In fall 2020 (8/26-12/18), instructors are expected to teach according to their assigned meeting schedule. The move to an online format after Thanksgiving break will not change this requirement for synchronous course activities. (Asynchronous activities are also possible, but must meet the same level of contact hours with students.) Most importantly, instructors may not end courses before Thanksgiving break, but must teach for the entire semester. This is in keeping with the requirements set forth in the University credit hour policy. (See the credit and contact hours section and this College Credit Hour Policy for an explanation of the policy.)

Half-semester courses:

As with full semester courses, half-semester courses in the latter half of the semester will be expected to move online after the Thanksgiving break. This will mean that a significant percentage of the course will be online for students. Instructors should review whether course objectives can be met in a fully, or close to fully, online environment. For courses with in-person elements, instructors should consider whether it is feasible to “front-load” these activities over the first part of the half-semester.

As in previous semesters, all half-semester courses must follow the AS&E credit hour policy regarding in-person (contact) hours and out-of-class hours.

Academic Deadlines in Fall 2020

Graduate and undergraduate academic deadlines will return to their normal structure in fall 2020. The add-drop period will be through the first four weeks of the semester (8/26-9/23), with paper/PDF add-drop forms necessary as in the past during the third and fourth week.

For undergraduates, the last date to add a four-credit independent study course is the third week of the semester (9/16). (See the independent study page in the academic handbook for timeline for courses with fewer than four credits.) The S/F and withdrawal deadlines will be in the eleventh week of the semester (11/13) for continuing students; the deadline for first-year undergraduate students and new undergraduate transfer students is the thirteenth week (12/2). See the section on “Policies on Course Grades” for information on the modified S/F and P/F policy from spring 2020.

For all graduate students, the withdrawal deadline will be in the eleventh week of the semester (11/13).

Course Enrollment Caps

Instructors should continue to have course caps that reflect the number of available seats and normally expected size for the course. While it is true that a significant number of students may not be able to take the course in-person, there is no expectation that instructors should increase course size to allow additional students learning remotely into the course. In fact, given that some of these remote learners...
may have the opportunity to return to campus, instructors should remain attentive to the overall room capacity as adjusted for social distancing requirements.

Course Time Conflicts (Student Schedules)

Due to the increase in the number of online courses in fall 2020, students may request instructors to approve time conflicts in the scheduled meetings of their course and other courses. Requests might be justified by the claim that the student can review materials asynchronously for the course and therefore is able to “double-up” by registering for multiple courses with overlapping meeting patterns.

AS&E strongly discourages instructors from approving these requests. This strategy of “doubling up” may lead to poor academic outcomes for students as they struggle with unanticipated difficulties with increased coursework. It can also upset the balance of the course as instructors attempt to meet the needs of an increased number of students within that course. Students should be encouraged to keep to a standard course load (i.e., 16-20 credits for undergraduates) without time conflicts as in past semesters.

Students Experiencing COVID-Related Issues with Course Enrollment

Instructors should try to be as flexible as possible with students who have had difficulty in registering for courses or making course changes due to COVID-related issues. College Center for Advising Services (CCAS) advisors can assist in indicating when a student falls into this category.

Accommodations for Students with COVID-Related Illness

Instructors are encouraged to consider the use of incomplete contracts for students who miss significant class time and/or assessments as a result of COVID-related illness and associated complications. The College Center for Advising Services (CCAS) can serve as a resource for instructors exploring this option. Instructors are also highly encouraged to use the Mid-Term Warning system for students experiencing difficulty in the course due to COVID-related illness (or other non-COVID) issues. (The Registrar’s Office will communicate on use of this system several weeks into the semester.)

On occasion, students reach out initially to CCAS or the Graduate Education and Postdoctoral Affairs office regarding these issues. Depending on the situation, these offices may request that instructors consider making accommodations for those students. The Dean's Office encourages instructors to support these requests whenever possible.

Please note that COVID-related illness will not generally be considered an official disability requiring accommodation under the Americans with Disabilities Act (ADA). This will typically be the case even if the student has an approved disability accommodation through Disability Resources. As a result, students should be referred to CCAS or the Graduate Education and Postdoctoral Affairs office. These offices will be able to assist students and refer students to the Office of Disability Resources in those rare cases that it might be appropriate.

Off-Campus Course Activities
University travel restrictions currently prohibit University-sponsored domestic and international travel through December 2020. Per this policy, all study abroad and faculty-led programs that require travel outside of the Rochester area have been cancelled.

The University is in the process of developing policies for off-campus courses in Rochester and the surrounding area. This includes field trips and community-engaged learning activities as part of a course. It is expected that approved course-related activities must follow University and state guidelines on social distancing and use of personal protective equipment (PPE) at all times. Guidance will be forthcoming on approval mechanisms, requirements for travel to off-campus sites, and related matters.

Course Evaluations for Fall 2020 Courses

AS&E will conduct course evaluations for fall 2020 courses for instructors and teaching assistants. These will occur on the normal schedule at the end of the semester. As in spring 2020, it is anticipated that the evaluations will include questions on student experience with remote learning and related pedagogical changes associated with COVID-19.

As in semesters prior to COVID-19, course evaluations from fall 2020 will be used for administrative activities, including Faculty Activity Reporting and promotion/tenure cases. Faculty will be given the opportunity to contextualize the results of these evaluations in relation to the continuing disruptions caused by COVID-19. Summaries of the results of these evaluations will be available to students as in previous semesters.

Allowed Research Activities for Graduate and Undergraduate Students

Undergraduate students will be able to register for independent research (395 and other research-related courses) and serve as research assistants in fall 2020 under certain conditions. For research conducted in laboratories, the principal investigator or facility director must have received approval to open the lab and the student must follow all safety protocols (PPE, distancing) outlined in the reopening plan. If not previously submitted, the PI or facility director should add undergraduate research assistants to the “work shift” portion of the research plan and obtain approval from the relevant chair or director. For research outside labs, students must follow University social distancing and PPE guidelines for public spaces. Research conducted off-campus may have additional rules or regulations. Supervisors should contact the AS&E Dean’s Office with questions or concerns on specific situations.

Undergraduate students will continue to be able to use Research & Innovation Grants (RIGs) and Humanities RIGs (HRIGs) in fall 2020 per the rules of these programs and subject to University and AS&E research guidelines.

Research is central to graduate education and graduate students will be able to conduct their research activities under University and AS&E guidelines.
Course Modality and Instructional Format

Course Modality

Courses will be offered in a hybrid (part in-person, part online) or completely online format in fall 2020. Instructors are not allowed to teach in an exclusively on-campus, in-person format in fall 2020.

If a course is in a hybrid format, in-person elements should be constructed such that students taking the course in-person should complete those elements (barring illness or other related issues) on campus to successfully complete the course. However, there should also be an online equivalent for in-person elements required for successful (100 percent) completion of the course by students learning remotely due to visa issues, health concerns, illness, or other factors. In other words, any in-person elements of the course for students on-campus must have an online “equivalent” for those leaning remotely that meet the same learning objectives as the in-person activities.

See the section, “Use of Incomplete Grades for Laboratory and Studio Courses,” for those rare cases in which an online equivalent is not possible.

Coding of Courses in Fall 2020 in UR Student

Courses will be coded in one of two ways in UR Student in fall 2020 – online or in-person. Other categories used in past semesters (e.g. hybrid) will not be used in fall 2020.

Coding may vary across the sections (e.g. lecture, labs, workshops, recitation) of the course depending on the instructor’s decisions on management of these course components.

The course section will be coded “online” if this particular component of the course must be completed in an online format. If there are “in-person” elements that are purely optional, meaning that they are not formally scheduled in UR student, not required to complete the course, and do not factor into grade calculation, then the course would still be considered “online.”

The course section will be coded “in-person” if there are any required components of the course that will take place “in-person” for students on campus. This coding would still be used even if some students will complete an online equivalent because of their own personal situation.

Distinct offerings of the same course by a different instructor (or the same instructor using different modalities) may be coded differently based on the instructional approach of that instructor.

Instructional Format

For courses with over 100 students, all lectures will be transitioned to an online format and must be recorded. Laboratories, workshops and recitations in these courses may be online or in-person as determined by the instructor. If in-person, the instructor must develop an online equivalent for students learning remotely that meets the same learning objectives as the in-person activities.

For courses with 50-99 students, lectures may be conducted in person or online and must be recorded. If lectures are in-person, students may need to be split across lecture sessions per week (depending on
classroom size) to improve social distancing within the course. Instructors are expected to divide students appropriately into these groups and provide a schedule identifying when these groups should attend lectures in-person. (The group function in Blackboard can be useful in managing this process.) Laboratories, workshops and recitations in these courses may be online or in-person as determined by the instructor. If in-person, the instructor must develop an online equivalent for students learning remotely that meets the same learning objectives as the in-person activities.

For courses under 50 students, instructors may not need to divide students into groups depending on room size, but should still plan to record lectures and other course elements per the guidance above. In-person elements must have an online equivalent that meets the same learning objectives as the in-person activities.

For courses of all sizes, instructors may choose to stream lectures, discussions and other course activities synchronously via Zoom. However, instructors must record these course activities for asynchronous viewing by students, especially those learning in significantly different time zones.

Classroom Assignments in Fall 2020

Courses with in-person components will be allocated classrooms based on social distancing guidelines. The rooms will be assigned based on occupancy sufficient for 50 percent of the enrolled students adjusted for social distancing. In general, this will mean that only 25 percent of the “normal” classroom capacity will be utilized in a given classroom.

Classroom assignments will be updated in UR Student by the AS&E Registrar’s Office.
Course Syllabi and Management

Generally Required and Recommended Syllabus Elements

Instructors are encouraged to review the syllabi requirement page for information about required and recommended syllabus elements.

Academic Honesty

Faculty should keep in mind that academic honesty rules apply to courses and work completed by all AS&E students. A copy of the policy itself can be found on the academic honesty website, and a list of tips for encouraging honesty in online teaching and learning can be found on the instructors' resources page of the site as well. Further queries can be directed to either the Academic Honesty Liaison or the Chair of the Board on Academic Honesty (see the contact us page of the honesty website).

Suggested Syllabus Additions for Fall 2020

Classroom Behavior Requirements related to COVID-19:

Instructors should reiterate University policies regarding social distancing and masking in classroom settings in their syllabus and in their first class sessions. Sample syllabus language and procedures for responding to students who fail to comply with guidelines will be made available shortly.

Students are also expected to adhere to the principles outlined in the UR COVID-19 Community Commitment.

Communication with Students:

Whether teaching on campus or remotely, instructors should specify how students can communicate with them, along with safe-interaction protocols. Specific information to include:

- Online only or online/in-person office hours
- Office hour locations for in-person and online meetings
- For in-person meetings, provide safe-interaction instructions (e.g., wear masks, follow waiting and social distance procedures in hallways or waiting rooms if another student is in the office, maintain 6ft distance, use sanitizer before entering)
- For virtual meetings, include technology platform (e.g., Zoom), access information (e.g., meeting ID), instructions for requesting a meeting, and instructions for accessing meeting room (e.g., you will first enter a waiting room, and then I will let you in); additionally, when scheduling online office hours, instructors should be sensitive to time zone differences and might consider expanding their weekly standard meetings to account for these differences.

Recording of office hours by instructors is not encouraged due to student privacy concerns. Students may record one-on-one office hour sessions with the instructor for their own personal use. Instructors may provide written summaries of common questions asked during office hours when useful for other students.
Attendance policies:

Instructors may set course policies on attendance in lectures and other course activities. However, instructors should keep in mind that students on-campus may have legitimate concerns about their physical presence in class due to health concerns. It is important that instructors not create conditions in which students feel compelled to attend class when potentially harmful to themselves or others (e.g. when exhibiting symptoms of illness). Attendance policies must be written to allow for accommodations and/or exceptions in these circumstances. As in previous semesters, instructors must also accommodate students with disabilities related to attendance and remote learning per guidance from the Office of Disability Resources.

In their attendance policy, instructors should also specifically address the concerns of students who will be learning remotely in significantly different time zones. "Significantly different" can be defined as time zone differences that result in students needing to attend courses between 10 p.m.-7 a.m. local time. Instructors should factor in the ability of these students to meet attendance requirements (due to time zone issues or otherwise) when assigning attendance-related grades. This is particularly important when calculating attendance as part of the grade for an assignment or the course.

See section on “Recording of Class Sessions and Use of Web Cameras” for more information on requiring attendance at Zoom lectures through use of computer web cameras.

Student Notification of Recording:

University counsel has issued guidance that instructors should notify students that synchronous Zoom sessions are being recorded using one or more of the following methods:

- Syllabus statement (sample: “Please note, all online classes will be recorded.”)
- Verbal statement at outset of first several class sessions
- One-time email to all students

Among these options, the best practice is to provide this notification in writing on the syllabus.

See the section, Recording of Class Sessions and Use of Web Cameras, for additional information on this topic.

Etiquette in online formats:

Instructors should communicate expectations for online etiquette with students, including proper forms of address, use of appropriate language, common courtesy around asking or answering questions in online class settings (e.g. Zoom sessions or discussion boards), including when interacting with instructors, teaching assistants and peers, and other matters. Information on online etiquette (“netiquette”) can be found one the Netiquette Homepage and the core rules of netiquette page.

Student Mental Health Services:
Students may experience a range of mental health and physical health conditions that may negatively impact their academic performance and ability to participate in day-to-day activities. Instructors may consider adding the information below as a resource to students. Instructors can find additional information on the responding to distressed or distressing students page.

The following confidential resources exist to help students:

- University Health Service: (585) 275-2662
- University Counseling Center: (585) 275-3113
- University Health Educator: (585) 273-5772
- RESTORE Sexual Assault Services 24-Hour Crisis Line: (585) 546-2777
- Title IX Office: titleix@rochester.edu
- Public Safety: (585) 273-3333.
- CARE Network: https://www.rochester.edu/care
- Mindful University Project: https://www.rochester.edu/mindful

Group Projects:

Instructors are highly encouraged to construct membership in group projects and other activities that takes into account time zone differences and/or actively consult with those groups to develop an appropriate plan for accommodating students who will be participating from a significantly different time zone.

Assignment of Textbooks

Students learning remotely in some countries may find it difficult to purchase textbooks due to lack of availability or excessive costs. Instructors should keep this potential constraint in mind when selecting textbooks for the course.

Instructors can also check the Rush Rhees Library catalog to determine if online versions of textbooks are available.

Accessibility and Close Captioning of Lectures and Other Course-Related Activities

As a best practice, AS&E encourages all instructors to caption materials, including recorded lectures, when possible. Captioning resources and best practices for developing inclusive courses can be found on the Office of Disability Resources' webpage on digital accessibility. Computer-generated captioning is available for videos uploaded through Panopto but should be manually added and edited for accuracy.

Instructors of students with disabilities who require captioned media as an accommodation will be notified via a student accommodation letter sent from the Office of Disability Resources. For instructors of students who require this accommodation, support for captioning and transcription will be available through the Office of Disability Resources.
Updates to the Course Syllabus Over the Semester

Instructors should keep their syllabi up-to-date over the course of the semester, and notify students when an updated version is available. Syllabi should reflect current assumptions about course content, assignments, and grading, especially if circumstances surrounding the course change. Students often depend on syllabi as the "document of record" to understand the instructor's current expectations for the course. Other course materials updated over the semester should also be easily accessible to students, and students should be instructed on how to find these materials.
Credit and Contact Hours

Courses in fall 2020 will continue to follow the AS&E credit hour policy. This policy mandates one hour of direct instruction and two hours of out-of-class activities (three hours total) per week per credit hour. For example, a four-credit hour course would have four hours of instruction and eight hours of out-of-class activity per week, or 12 hours total per week, for the entirety of the semester. Direct instruction includes in-person or recorded lectures or discussions, or any other activity in which the instructor is directly engaged in teaching students. Asynchronous recordings also constitute direct instruction. Out-of-class activities include course reading, papers, problem sets, or other associated "homework" for the course. It may also include group projects or field trips.

There are no differences in credit hour requirements for students on-campus or learning remotely. Instructors may provide different assignments or activities for students on-campus vs. those learning remotely if there is a pedagogical reason or logistical barrier (i.e. students learning remotely need access to campus to complete the activity) for doing so. These assignments should be equivalent as much as possible and have the same learning objectives. For the purposes of this policy, equivalence would be defined as having similar scope and focus, having a comparable difficulty level, and requiring roughly the same amount of time and effort for the average student to complete.

As noted academic calendar and instruction section, instructors are expected to adhere to contact hour requirements for the entire semester, including after the transition to online education after Thanksgiving break.

Management of Independent Studies, Independent Research, and Reading Courses

As in previous semesters, instructors should adhere to the credit hour policy as regards independent studies, independent research, reading/research courses (graduate), and supervised teaching. Instructors can find information in the College Credit Hour Policy PDF. Based on the credit hour policy, this corresponds to the one hour of in-person and two hours of out-of-class activities per week for 15 weeks in the credit hour policy ($45 = (1+2) \times 15$). The general rule of thumb for is that students should be expected to complete 45 hours of work per credit over the course of the semester.

Designation of credit hours for these courses should be based on an assessment of the actual work expected to be completed by the student in relation to these requirements.

Instructors and students have flexibility to conduct individual meetings either virtually or in person.
Policies on Examinations and Other Assessments

The best strategy for examinations and assessments will vary depending on the discipline, the learning objectives of the course, and the role of the course within the program of study. Instructors should keep in mind student learning conditions (both in-person and remote) in fall 2020 when designing assessments.

In courses typically offering one or two large exams as a significant portion of the course grade, faculty are encouraged (1) to create multiple versions of the same exam in order to reduce opportunities for academic dishonesty (and to be able to more quickly detect any dishonesty that does occur), and (2) to consider implementing take-home exams in order to reduce some of the stress and pressure that can contribute to academic dishonesty. This structure of assessment will allow faculty to assess student learning more effectively across any disruptions in the learning environment. It will also allow students arriving late or learning remotely across widely diverse environments to adjust to course expectations. While even these methods have some drawbacks and need to be adjusted to the structure of assessment within a specific academic discipline, we believe that they can benefit students and instructors when used strategically.

Instructors are also expected to provide clear instructions and guidance on exams and other assessments. These should be of equivalent quality and clarity for students in-person or learning remotely, including clarifying questions during the exam or other assessment. Instructors should be especially attentive to communicating this information in a timely fashion to students working remotely.

Information about course pedagogy in online and hybrid formats is available on the resources for teaching online page.

Timing of Mid-Term Exams

Mid-term exams are expected to take place during normal class times when in-person or synchronously online. Exams should not exceed the scheduled time for the class, since this may cause conflicts with student attendance in other courses. Instructors may schedule exams outside normal class times, but must determine a suitable time with students and accommodate any student conflicts with exams or class sessions in other courses.

Asynchronous and open-book exams should be scheduled to be submitted during normal class sessions or a suitable time that does not create conflicts with student attendance in other courses.

Common Exam Times

The College will continue to offer a common exam period for highly subscribed introductory courses in fall 2020. The College Center for Advising Services (CCAS) has reviewed the common exam schedule and has added Friday dates to maximize scheduling of exams. This reflects the desire of some instructors to offer more frequent, "lower stakes" exams to students.

Instructors may also provide evening hours for students in significantly different time zones. This should be managed at the level of the department and/or individual instructor.
Reading Period

AS&E will have a reading period in fall 2020. As in past semesters, this period may not be used for final exams, papers, projects, or presentations. Students use this period to prepare for their finals. Instructors should contact the Dean's Office if they have concerns.

Final Exam Period

Instructors will be expected to generally adhere to the final exam schedule when giving remote final exams. (Schedules will be posted on the registrar’s finals page.) As in previous semesters, no cumulative assessments of any type may be given during reading week or the final week of classes (12/2 - 12/12). Instructors should clearly explain the nature of the final exam and rules associated with taking the exam in the syllabus. Instructors should also discuss plans for the final exam early in the semester.

For "in-class exams," instructors should use the official time and time duration on the exam schedule for students on-campus or in similar time zones. Instructors should offer a second exam time for students in significantly different time zones, accommodating scheduling conflicts as they arise.

For open-book exams, instructors should use the official exam date as the completion time for the exam. For example, if the instructor gives the students 24 hours to complete an exam, the end of that 24-hour period should be the end of the official exam period for the course.

Alternative Uses of Final Exam Period

Instructors may give an in-person, cumulative "final" exam prior to Thanksgiving but must have alternative course assignments (e.g. paper, project) in the period after Thanksgiving. In other words, instructors are not allowed to effectively end the course prior to Thanksgiving. See section on “Academic Calendar and Instruction” for more information.

Equivalence Between In-Person and Remote Exams

Faculty are expected to construct exams and other assessments of equivalent range and difficulty of material, and that assess the same learning objectives, for students on-campus and learning remotely. Exam deadlines may be adjusted to allow for time zone differences for students learning remotely, but with attention to not give either set of students (in-person or remote) an unfair advantage in the amount of time to complete the exam or advanced knowledge of exam content.

If students on-campus and learning remotely are given different types of exams, the exams should assess for the same learning objectives or the instructor should make an adjustment in how overall course grades are calculated. This adjustment should be clearly articulated and announced early in the semester with reminders before the exam(s).

Instructors may give online exams for students learning remotely and in-person exams for those students physically attending the course. Instructors may also decide to offer exams online for all students regardless of whether learning remotely or physically present.
Instructors are encouraged to take the same approach to proctoring for in-person and online exams. However, instructors have flexibility deciding to use proctoring in online exams versus in-person exams as long as they ensure that students meet expectations for academic honesty. If instructor decide to use online proctoring, they must follow the guidelines on consistency in the application of proctoring as outlined in this proctoring with Zoom policies and guidance PDF. (See section on “Uniform Application of Zoom Proctoring.”)

Online Synchronous and/or Timed Exams

Instructors should be aware that one of the most common sources of student discontent in spring 2020 was the use of online synchronous and/or timed tests. Discontent resulted from managing the pressure of the exam in a context in which students faced complicated (and somewhat variable) testing environments and technological issues. Students reported leaving exams feeling that these factors inhibited their ability to show their true mastery of course content. Strong preference was given for asynchronous and take-home exams due to the flexibility these formats provided to students in navigating those circumstances.

Instructors are strongly encouraged to keep this student feedback in mind when constructing exams for fall 2020. Many students will be on-campus, but it is expected that some students will be learning remotely in each course. Instructors will need to balance the needs of both populations of students when giving exams to ensure fairness in testing and grading. If offering synchronous exams, instructors should keep in mind the situation of students in significantly different time zones and provide alternative testing times for these students.
Policies on Course Grades

Courses Used for Curricular Elements (Major, Minor, Cluster)

AS&E and the College will revert back to existing polices on course grading for graduates and undergraduates. (See section on "Incompletes from spring 2020 and S/F policy" for the one exception to this policy.)

For undergraduates, courses towards majors, minors, clusters, or the primary writing requirement must be taken for a letter grade. If the student completed the course S/F, this grade will need to be uncovered before graduation per College rules. More information on the policy can be found on the satisfactory/fail (S/F) option page.

Satisfactory/Fail (S/F) and Pass/Fail (P/F) for Fall 2020

For undergraduate students, the College has no plans to institute a modified S/F policy for fall 2020. The satisfactory/fail policy for fall 2020 will instead revert back to the pre-COVID policy.

Students may submit requests to CCAS to select the S/F option for a class. Per the policy for undergraduates, students will only be allowed to S/F a maximum of one full course, and courses graded S/F in fall 2020 may not be used to satisfy major, minor, cluster, or primary writing requirements (unless the grade under the “S” is uncovered). More information and additional requirements can be found on the satisfactory/fail (S/F) option page.

For graduate students, students will not be able to select P/F as a grading option. However, instructors can choose to make a course into a P/F course according to existing policy. Instructors are reminded that all graduate students in a course section must be graded according to the same scheme (e.g. letter or P/F).

Incompletes from Spring 2020 and S/F policy

The modified S/F policy from spring 2020 will apply to all courses being completed as a result of a "N" grade or incomplete ("I") contract. The Registrar's Office will use the option selected by the students in spring 2020 when entering grades. Students will not be able to change this selection. Instructors may request information on the student's grading basis from the Registrar's Office or simply provide a letter grade (which will be converted if the student chose S/F).

Use of Incomplete Grades for Laboratory and Studio Courses

Instructors should provide online equivalents to laboratory, studio or other "hands-on" elements of their course whenever possible. These equivalents should meet the same learning objectives as the in-person version. However, in some rare cases pedagogically valuable equivalents will not be possible and that students will have to "make up" these experiences through department-provided opportunities in subsequent semesters. In these cases, students should be given an "incomplete" grade in the course that will be resolved upon completion of the "make-up" activity.
Technology Requirements for Fall 2020 Courses

Minimum Technological Requirements for Fall 2020 Courses

For online courses and online elements of hybrid courses, instructors must provide information to students on the minimum quality of internet access and computing necessary for course activities, including download/upload of material, internet streaming, video recording, scanning and/or photos, or other needs.

In general, for a “standard” online course, students will need a laptop with a webcam, 8GB of memory and 256GB of local storage. Standard would be defined in this case as requiring the student to use Blackboard, library resources, and the web (to access journals, articles, etc.), to have the ability to watch Zoom lectures (synchronously and asynchronously), and potentially be available for use with Zoom proctoring.

Courses using specialized software and/or services may have additional requirements. Instructors must make these clear to students on the syllabus and in their initial class sessions.

Non-supported Course Software and Teaching Tools

The College recognizes that many different educational technologies and teaching tools are available to instructors. University IT has an active program to review security and privacy issues for software and works with UR Counsel to evaluate potential liability around data breaches. Software and services that satisfy University IT’s criteria in these areas are considered “supported” and are available for instructor use.

The College actively discourages instructors from using any non-supported software or teaching tools. In particular, instructors must not use non-supported software when the following conditions apply:

- The software has not been vetted by AS&E IT and University IT and passed the necessary Information Security Program requirements.
- The software imposes additional costs on students outside those collected by the University bookstore. Up-front course costs processed by the bookstore ensure that these costs can be covered by financial aid.

Available Course Technologies

Thematic lists of supported software and teaching tools can be found at the following webpages:

- University IT’s teaching and learning page
- University IT’s software page
- University IT’s blackboard online discussions page
- IT resources’ learning management page
- CETL’s education technology tools page
Computing software currently licensed for student use in AS&E computer labs and remote access to AS&E computer labs can be found at:

- ECM’s windows software page

Instructors may contact Jason Wagner (jason.wagner@rochester.edu) for questions on instructional software and to discuss the possibilities and process for approving new software.
Recording of Class Sessions and Use of Web Cameras

Course Elements Requiring Recording

All formal course elements must be recorded on Zoom and uploaded for the use of students learning remotely, except in the case of class discussions on politically charged or sensitive topics. In this case, instructors should make student aware that this information may not be available for the duration of the course (or longer) and clearly communicate when this material will be removed. Instructors should also carefully consider when such material should be assessed by examinations or other means, given reduced access. See this site for more information.

This applies to lectures, recitations and discussion sections, labs, PLTL Workshops, etc. It is recommended that instructors record optional sessions, such as instructor-led exam review sessions, if offered at times that will be difficult for students learning remotely to attend. Office hours are not subject to this requirement.

For tutorials on how to record in Zoom and upload into Panopto, please see the following video tutorials: AS&E tutorials and Central IT tutorials.

Student Notification of Recording

University counsel has issued guidance that instructors should notify students that synchronous Zoom sessions are being recorded using one or more of the following methods:

- Syllabus statement (sample: “Please note, all online classes will be recorded.”)
- Verbal statement at outset of first several class sessions
- One-time email to all students

Among these options, the best practice is to provide this notification in writing on the syllabus.

Student Engagement and Use of Cameras in Lectures and Other Class Activities

Instructors are allowed to mandate that students learning remotely turn on their cameras during lectures and other class activities. However, instructors should be aware of the complexities associated with such a request before instituting as a policy.

Instructors should be aware that students may experience technical difficulties when turning on cameras, especially the need to turn off the camera to stabilize poor internet quality on Zoom calls. Within the educational community, instructors have also noted that there may be personal and social dynamics associated with students showing their background (i.e. living/working conditions). Students may feel distracted or uncomfortable with allowing the instructor and fellow students “into their world” in this way.

On the other hand, instructors have also noted the importance of virtual face-to-face interaction in class sessions, particularly in relation to building a community of learners in the classroom. These interactions can be seen as mitigating some of the “transactional” and impersonal aspects of distance education, generating more positive educational outcomes. Virtual backgrounds or still photos on Zoom can
potentially be used to generate these interactions while also respecting student privacy, provided there are no technological issues.

Each instructor will need to decide how to balance these competing prerogatives in their course, but should do so without penalizing students who have technological barriers to turning on their cameras. Instructors should also keep in mind that it may be difficult to independently verify such barriers when constructing policies.

Captioning of Video Recordings

See section on “Accessibility and Close Captioning of Lectures and Other Course-Related Activities” for information on this topic.

Deletion of Video Recordings

Video recordings may be removed only once every student in the course has a resolved final grade, including the final resolution of all N and I grades. For most courses, this will be a minimum of six months and may be longer depending on the nature of the incompletes in the course (with the possible exception of class session recordings of politically charged or sensitive conversations per section above on “Course Elements Requiring Recording”).
