Student success can be supported by advances in technology even outside of instruction. In this colloquium, we want to explore what some existing AI-powered tools can do to support career services and other areas of student services, while also identifying potential problems related to data collection and sharing practices.

This event will include brief presentations (no more than 5 minutes each) from a few “conversation starters” who will share their perspectives/current work on the topic, followed by facilitated breakout room discussions where all participants can share and discuss their own experiences and thoughts on the topic, and concluding with reporting back by breakout room facilitators.

“Conversation starters”:

- A. **Quincia: A tool to support students’ job searches** (*Cathy Caiazza, Greene Center for Career and Connection, University of Rochester*)
- B. **Overview of currently available AI-tools for student services** (*Yue Zhao, Goergen Institute for Data Science, University of Rochester*)
- C. **Data privacy concerns** (*Nathan Harris, Warner School of Education, University of Rochester*)
- D. **Challenges and Opportunities: A Student Services Staff’s perspective** (*Amber Graham, Greene Center for Career and Connection, University of Rochester*)

Please join us in this public and free event, so we can all learn from each other’s experiences and insights
